SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- . . Figures not available.
- . . . Figures not appropriate or not applicable.
- Nil or zero.
- — Amount too small to be expressed.
- p Preliminary figures.
- r Revised figures.
- x Confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- . . Nombres indisponibles.
- . . . N'ayant pas lieu de figurer.
- Néant ou zéro.
- — Nombres infimes.
- p Nombres provisoires.
- r Nombres rectifiés.
- x Confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Primary Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) rose 2.7% higher in January to 156.1 from the December of 152.0. It was 17.3% higher than the January index of 133.1.

In terms of the relative contribution to the overall increase in the total manufacturing index, the more noticeable increases were recorded in the foods and beverages group, particularly in the slaughtering and meat packing industries (3.9%), sugar refineries (19.8%) and breweries (2.3%). Increases also occurred in the paper and allied products group (6.9%) reflecting higher prices registered in pulp and paper mills (8.0%). Price increases recorded in rubber and refining (3.0%) and iron and steel mills (4.9%) were mainly responsible for advances in the primary metals group (3.7%). Decreases during the month were relatively insignificant.

NOTES SUR LES PRIX ET SUR LES NOMBRE-INDICES DES PRIX

Indice des prix de vente dans l'industrie: Fabrication (1961=100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières a augmenté de 2.7% passant de 152.0 en décembre à 156.1 en janvier. L'augmentation est de 17.3% par rapport à l'indice de janvier 1973 (133.1).

Si l'on compare les facteurs de variation de l'indice total, il faut retenir en premier lieu l'augmentation enregistrée dans le groupe des aliments et boissons, particulièrement dans l'industrie de l'abattage et du conditionnement de la viande (3.9%), les raffineries de sucre (19.8%) et les brasseries (12.3%). On a également observé des augmentations dans le groupe du papier et activités connexes (6.9%) qui reflétaient les augmentations de prix enregistrées dans l'industrie des pâtes et papiers (8.0%). Les augmentations de prix dans le domaine de la fonderie et du raffinage (3.0%) et dans la sidérurgie (4.9%) expliquent en majeure partie l'augmentation de l'indice du groupe des industries de première transformation des métaux (3.7%). Les baisses du mois ont été relativement peu importantes.

General Wholesale Price Index (1935-39=100)

The general wholesale price index rose 3.4% in January 1974 to 427.0 from the revised December 1973 index of 412.8. It was 26.6% higher than a year earlier. All eight major group indexes were higher.

The textile products group index rose 5.5% in January to 412.9 from the December index of 391.5. This was due to price increases in raw cotton, cotton fabrics and miscellaneous cotton products. The vegetable products group moved 4.0% higher to 439.1 from the revised December index of 422.2 on higher prices for sugar and its products and grains. An advance of 3.3% to 495.2 from the revised December index of 479.6 in the animal products group reflected price increases for furs, livestock and fresh meats. The wood products group rose 3.2% to 532.8 from the revised December index of 516.1. The chemical products, non-ferrous metals, non-metallic minerals and iron products groups rose 2.2%, 2.9%, 2.6% and 2.5% respectively.

The following table lists the Total Index and component groupings for specified dates:

*These indexes are preliminary. - Ces indices sont provisoires.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 3.4% en 1974 par rapport à l'indice rectifié de décembre 1973 (412.8) pour atteindre 427.0. Ceci représente une augmentation de 26.6% par rapport à janvier 1973. Les indices des huit groupes ont augmenté.

L'indice du groupe des matières textiles a augmenté de 5.5% par rapport à décembre 1973 (391.5) pour atteindre en janvier le chiffre de 412.9. Cette augmentation était attribuable aux hausses de prix du coton brut, des tissus de coton et de produits du coton. L'indice du groupe des produits d'origine végétale a progressé de 4.0%, passant de 422.2 en décembre (indice rectifié) à 439.1 en janvier à la suite de la hausse des prix du sucre et des produits connexes, de même que des céréales. Dans le groupe des produits d'origine animale, l'indice a augmenté de 3.3% pour passer de 479.6 en décembre (indice rectifié) à 495.2 en janvier, à la suite de la hausse des prix de la fourrure, du bétail et de la viande fraîche. L'indice du groupe des produits du bois a augmenté de 3.2% par rapport à l'indice rectifié de décembre (516.1) pour passer à 532.8. Les indices des groupes des produits chimiques, des métaux non ferreux, du fer et des métaux non ferreux ont enregistré des hausses respectives de 2.2%, 2.9%, 2.6% et 2.5%.

Le tableau suivant présente l'indice total et celui des groupes composants pour certaines dates:

urity Price Indexes (1961=100)

The investors index of common stock prices moved up % in January to 180.5 from 194.5 in January 1973, which ans a year-to-year decrease of 7.2%. Of the three major ups, industrials increased 3.1% to 194.5, utilities 5.0% to 1 and finance 2.2% to 176.9. Within the thirteen industrial sub-groups, the only decrease was registered in retail le, down 0.7% to 132.6; the same sub-group showed the est year-to-year decrease (-25.9%) from 179.0 in January 3. In utilities, all sub-groups increased. An increase in the nce index resulted from banks up 2.8% to 210.8 and estment and loans up 0.1% to 123.1.

In the same period the index of mining stock prices eased 19.0% to 161.5; gold was up 31.3% to 258.6 and e metals were up 6.1% to 109.7.

Of the two supplementary indexes, uraniums ad- eed 7.7% to 307.3 and primary oils and gas moved up % to 492.4.

The preferred stock index increased 1.3% from 69.1 in ember to 70.0 in January.

adian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at termi- markets advanced 4.8% to 408.1 in January from the ember index of 389.4. An increase of 5.1% to 530.4 from 5 in the animal products index reflected higher prices for rs, raw wool and lambs on both Eastern and Western ects, for cheesemilk in the East, and for fluid milk and s in the West. Lower prices were shown for hogs on both ects, for eggs in the East, and for calves in the West.

The field products index moved 4.2% higher to 285.8 n 274.3 on price increases for potatoes on both markets hay in the East, and for rye and flax in the West. Lower es were shown for corn in the East.

irty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calcu- l as an unweighted geometric average, moved up 3.5% to 5 in January from the revised December index of 440.0. es were higher for fourteen, lower for six and unchanged en. Principal changes included increases for raw sugar, s, raw wool, bleached sulphite pulp, cottonseed oil, zinc, s, oats, raw cotton, raw rubber, structural shapes, beef s, wheat and white lead while decreases were recorded rpruce lumber, hogs, sisal, linseed oil and tin.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours de placement des actions ordinaires a augmenté de 3.3% en janvier pour s'établir à 180.5: le même indice se situant à 194.5 à pareille date l'an passé, ce qui représen- te une diminution annuelle de 7.2%. Parmi les trois grands groupes, les valeurs industrielles ont gagné 3.1% pour se fixer à 194.5, les services publics ont augmenté de 5.0% pour atteindre 135.1 et les finances ont progressé de 2.2% pour s'établir à 176.9. Parmi les treize sous-groupes industriels, la seule perte (0.7%) a été enregistrée dans les actions du commerce de détail qui s'inscrivent à 132.6; la diminution annuelle la plus forte (25.9%) est à signaler dans ce même sous-groupe qui indiquait 179.0 en janvier 1973. Dans le cas des services d'utilité publique, tous les sous-groupes sont à la hausse. L'augmentation de l'indice des finances est attribuable à un gain des banques de l'ordre de 2.8% pour s'établir à 210.8, et à une augmentation des placements et des prêts de 0.1% pour atteindre 123.1.

Au cours de la même période, l'indice du cours des titres miniers a progressé de 19.0% pour atteindre 161.5; les aurifères ont augmenté de 31.3% pour atteindre 258.6, et les métaux communs ont progressé de 6.1% pour se fixer à 109.7.

Pour ce qui est des deux indices supplémentaires, l'ura- nium a augmenté de 7.7% pour s'établir à 307.3; le pétrol et le gaz primaires ont enregistré une hausse de 6.9% pour s'inscrire à 492.4.

L'indice des actions privilégiées a augmenté de 1.3% montant de 69.1 en décembre à 70.0 en janvier.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 4.8%, passant de 389.4 en décembre à 408.1 en janvier. L'augmentation de 5.1% de l'indice des prix des produits d'origine animale, qui est passé de 504.5 à 530.4, est imputable à une hausse des prix des bouvillons, de la laine brute et des agneaux sur les marchés de l'Est et de l'Ouest, du lait de fromagerie dans l'Est et du lait nature et des oeufs dans l'Ouest. On a observé une baisse du prix des porcs sur les deux marchés, des oeufs dans l'Est et des veaux dans l'Ouest.

L'indice des prix des produits de grande culture a pro- gressé de 4.2%, passant de 274.3 à 285.8, à la suite d'une hausse du prix des pommes de terre sur les deux marchés, du foin dans l'Est, et du lin et du seigle dans l'Ouest. On a observé une baisse du prix du maïs dans l'Est.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme une moyenne géométrique non pondérée, a progressé de 3.5% pour s'établir à 455.5 en janvier contre 440.0 en décembre (indice rectifié). Les prix de quatorze marchandises ont augmenté, ceux de six ont baissé et ceux de dix sont demeurés inchangés. Les principales variations comprennent une hausse du prix du sucre brut, des bouvillons, de la laine brute, de la pâte au sulfite blanchie, de l'huile de coton, du zinc, du plomb, de l'avoine, du coton brut, du caoutchouc brut, des profilés de charpente, des peaux de boeuf, du blé et de la céruse et une baisse du prix des sciages d'épinette, des porcs, du sisal, de l'huile de lin et de l'étain.

Consumer Price Movements

The Consumer Price Index for Canada (1961 = 100) rose 0.8% to 157.6 in January from 156.4 in December. Food prices advanced 1.1% while the level of prices for All-Items other than Food moved up 0.7%. Among the non-food components, the Transportation index climbed 1.6% and the Housing component moved up 0.6%. The elements for Recreation, Education and Reading and for Health and Personal Care rose 0.5% and 0.4%, respectively. No change was recorded for the Tobacco and Alcohol component but the Clothing index edged down 0.1%. Between January 1973 and January 1974, the All-Items Index advanced 9.1%.

The Food index increased 1.1% to 174.0 in January from 172.1 in December mainly in response to an advance of 1.2% in the level of prices for food consumed at home; food eaten away from home rose 0.7%. Amongst major contributors to the increase in the index of home-consumed food were higher price levels for fresh and processed fruit and vegetables, for beef, and for sugar which rose almost 35% in the latest month to reach a level nearly 47% above twelve months earlier. Pork, which fell in price for the fourth consecutive month, and poultry were the only major index components recording decreases. Fruit and vegetable prices registered a 3.7% rise in the latest month, with fresh vegetables advancing by 7.4% and fresh fruit by 2.0%. In contrast to an increase of over 27% in fresh fruit prices since January 1973, fresh vegetable prices declined by over 4% in the same period. The index for meat, poultry and fish edged down 0.1% in the latest month as pork and poultry prices fell 1.2% and 0.7%, respectively, thus outweighing an advance of 0.8% in the average price of beef. Over the twelve months since January 1973 poultry prices, on average, climbed 37%, while both beef and pork advanced in price by over 22%. Egg prices rose 1.2% between December and January, and were retailing over 31% above their level of January 1973. Although bread prices remained unchanged in the latest month, price increases for such products as cookies, cake mix and macaroni caused the bakery and cereal products index to advance 0.5%. The index for dairy products rose 0.3% mainly in response to higher quotations, in a number of centres, for cheese and ice cream. Led by higher margarine and shortening prices, the index for fats and oils increased 1.2%. Prices of convenience food items rose 1.0%, on average, and beverage prices, including coffee, tea and soft drinks, advanced 0.8%. Among other food items, notable increases were recorded for chocolate bars and jelly powder. In the twelve months to January 1974, the Food index moved up 16.0%, with the price of food consumed at home rising 15.6% and that for food away from home 18.1%.

The Housing index rose 0.6% to 158.4 in January from 157.4 in December as a result of increases of 0.4% and 1.0% in the shelter and household operation components,

Mouvements des prix à la consommation

En janvier, l'indice des prix à la consommation pour Canada (1961 = 100) a augmenté de 0.8% par rapport à 156.4 décembre et a atteint 157.6. Le prix des aliments a augmenté 1.1%; le niveau des prix de l'ensemble des articles, aliments exceptés, a augmenté de 0.7%. En ce qui concerne les éléments autres que les denrées alimentaires, l'indice des transports a grimpé de 1.6% et l'élément habitation a augmenté de 0.6%. Les éléments loisir, formation et lecture, et hygiène et soins personnels ont augmenté respectivement de 0.5% et de 0.4%. L'élément tabac et alcool n'a pas varié, mais l'indice de l'habillement a diminué de 0.1%. Entre janvier 1973 et janvier 1974, l'indice d'ensemble a progressé de 9.1%.

L'indice des aliments a augmenté de 1.1% et atteint 174.0 en janvier; il était de 172.1 en décembre, et l'augmentation résulte principalement compte des progressions de 1.2% du niveau du prix des aliments consommés à la maison. Les repas pris à l'extérieur ont augmenté de 0.7%. Parmi les facteurs qui ont le plus contribué à l'augmentation de l'indice des aliments consommés à la maison, il faut mentionner l'augmentation du prix des fruits et des légumes frais et conditionnés, du bœuf et du sucre; pour ce dernier, l'augmentation a été de 35% le mois dernier ce qui correspond à une hausse de près de 47% dans les 12 derniers mois. Le porc, qui baisse depuis quatre mois consécutifs, ainsi que la volaille, sont les seuls éléments importants en baisse. Le prix des fruits et légumes fait ressortir une hausse de 3.7% le mois dernier: les légumes frais ont augmenté de 7.4% et les fruits frais de 2.0%. Alors qu'il y avait eu une hausse supérieure à 27% du prix des fruits frais depuis janvier 1973, le prix des légumes frais a diminué de plus de 4% pendant cette même période. L'indice de la viande, de la volaille et du poisson a légèrement diminué (0.1%) le mois dernier; en effet, les prix du porc et de la volaille ont baissé respectivement de 1.2% et de 0.7%, ce qui contrebalance une progression de 0.8% du prix moyen du bœuf. Au cours des 12 mois écoulés depuis janvier 1973, le prix de la volaille a augmenté en moyenne de 37%, le prix du bœuf et du porc progressant pendant la même période de plus de 22%. Le prix des oeufs a augmenté de 1.2% de décembre à janvier; l'augmentation au stade de détail était donc supérieure de 31% par rapport à janvier 1973. Bien que le prix du pain n'ait pas changé le mois dernier, les hausses du prix de produits tels que les petits gâteaux, les mélanges à gâteaux et les macaronis ont fait progresser l'indice des produits de boulangerie et des céréales de 0.5%. L'indice des produits laitiers a augmenté de 0.3%, principalement en réaction à l'augmentation des prix du fromage et de la crème glacée dans un certain nombre de centres. A la suite d'une augmentation du prix de la margarine et du shortening, l'indice des matières grasses et de l'huile a augmenté de 1.2%. Le prix des aliments cuisinés a augmenté de 1.0% en moyenne, et le prix des boissons, y compris du café, du thé et des boissons gazeuses, a progressé de 0.8%. En ce qui concerne les autres denrées alimentaires, on a enregistré des augmentations sensibles en ce qui concerne les plaques de chocolat et la gelée en poudre. Au cours des douze mois terminés en janvier 1974 l'indice des aliments a augmenté de 16.0%, le prix des aliments consommés à la maison augmentant de 15.6%, et le prix des repas pris à l'extérieur augmentant de 18.1%.

De 157.4 en décembre, l'indice de l'habitation est passé à 158.4 en janvier; cela représente une augmentation de 0.6% qui provient de hausses de 0.4% et de 1.0% respectivement dans

spectively. Within shelter, the homeownership element moved up 0.7% because of increases in the indexes for mortgage interest, new houses and homeowner repairs: rents edged up 0.1%. Among household operation items, domestic gas and electricity rates rose in some centres and furniture quotations increased, on average, 0.6%. Among other home furnishings, floor coverings, linen, draperies and dishes were higher in price. Household supply items rose 0.7% as most items surveyed recorded increases. Household help wages rose in many centres causing the index for household services to advance 3.3%. In the twelve months to January 1974, the housing index rose 7.0%.

The Clothing index edged down 0.1% to 144.8 in January from 144.9 in December mainly in response to seasonal sale prices on a number of items. The footwear and women's wear indexes fell 0.7% and 0.1%, respectively; the former in response to sales on women's and children's footwear and the latter because of sales on items of outerwear and hosiery. In contrast, the men's wear index rose 0.3% as sale prices on some items were outweighed by increases on others. The children's wear index edged up 0.2% and that for price goods advanced 1.1% reflecting higher quotations for cotton, cotton blends and synthetic material. In the twelve months to January 1974, the Clothing index rose 7.5%.

The Transportation index rose 1.6% to 143.5 in January from 141.3 in December as increases were recorded in both the private and public transportation components. Within the former, new car quotations rose 3.3% as general increases were recorded for all models priced but with the greatest relative advances being registered for the compact and sub-compact models. Although motor oil prices rose, on average, 2.4% following increases in many centres, the gasoline index, having risen for the previous eight consecutive months, remained unchanged between December and January. The increase in the public transportation component was mainly caused by advances in the train and plane fares indexes, although there were also effective taxi fare increases in Winnipeg and in a number of Quebec cities. In the twelve-month period ending January 1974, the Transportation index rose 7.7%.

The Health and Personal Care index rose 0.4% to 161.8 in January from 161.1 in December as increases of 0.4% and 0.2% were recorded in the Personal Care and Health Care components, respectively. Amongst items of personal care, toiletry prices rose, on average, 0.7% and men's haircut charges increased in some outlets. Scattered price increases for non-prescribed medicines were the main cause of the advance in the Health Care component. In the past twelve months, the Health and Personal Care index rose 6.5%.

The Recreation, Education and Reading index rose 0.5% to 149.0 in January from 148.3 in December mainly as a result of higher newspaper subscription rates in Toronto, Quebec City and some other centres. In the twelve months to

l'élément logement et l'élément dépenses de ménage. A l'intérieur de l'élément logement, les frais de propriété ont augmenté de 0.7% du fait d'une hausse de l'indice de l'intérêt hypothécaire, des maisons neuves et des réparations à la charge du propriétaire, le loyer n'a augmenté que de 0.1%. En ce qui concerne les dépenses de ménage, le gaz et l'électricité ont augmenté dans certains centres et le prix du mobilier a en moyenne augmenté de 0.6%. En ce qui concerne les autres accessoires ménagers, les revêtements de sol, le linge de maison, les rideaux et la vaisselle ont augmenté. Les fournitures de ménage ont augmenté de 0.7%; en effet la plupart des articles entrant dans l'indice ont connu une hausse de prix. La rémunération du personnel domestique a augmenté dans nombreux centres ce qui a amené l'indice des services ménagers à progresser de 3.3%. Au cours des douze mois précédant janvier 1974, l'indice de l'habitation a augmenté de 7.0%.

L'indice de l'habillement qui se situait à 144.9 en décembre, a diminué de 0.1% (144.8) en janvier; cela résulte principalement des prix de solde saisonnier sur un certain nombre d'articles. L'indice des chaussures est tombé de 0.7%, et l'indice des vêtements pour femmes a diminué de 0.1%; la première de ces baisses correspond au solde de chaussures pour femmes et pour enfants et la deuxième est attribuable au solde de vente de vêtements de dessus et de bas. Par contre, l'indice des vêtements pour hommes a augmenté de 0.3%, car les prix de solde pratiqués sur certains articles ont été contrebalancés par l'augmentation du prix d'autres articles. L'indice des vêtements pour enfants a légèrement augmenté (0.2%) et l'indice des tissus à la pièce a progressé de 1.1%, du fait d'une hausse de prix des tissus de coton, de mélanges de cotons et des tissus synthétiques. Au cours des 12 mois terminés en janvier 1974, l'indice de l'habillement a augmenté de 7.5%.

L'indice des transports, qui se situait à 141.3 en décembre, a progressé de 1.6% et atteint 143.5 en janvier; en effet, des augmentations se sont produites tant en ce qui concerne l'élément transport privé que les transports publics. Dans le premier de ces éléments, le prix des voitures neuves a augmenté de 3.3% à la suite d'une hausse générale du prix de tous les modèles de l'indice, la plus forte de ces augmentations concernant cependant les modèles compacts et plus petits. Bien que le prix de l'huile à moteur ait en moyenne augmenté de 2.4% à la suite d'une augmentation dans de nombreux centres, l'indice de l'essence, qui avait augmenté constamment les huit mois précédents, est resté inchangé de décembre à janvier. L'augmentation de l'élément transports publics est principalement due à une hausse des tarifs ferroviaires et aériens, bien que l'on doive également tenir compte d'augmentations réelles du prix des taxis à Winnipeg et dans un certain nombre de villes du Québec. Au cours de la période de 12 mois terminée en janvier 1974, l'indice des transports a augmenté de 7.7%.

L'indice de l'hygiène et des soins personnels a augmenté de 0.4% et atteint 161.8 en janvier; par rapport aux 161.1 de décembre, l'indice des soins personnels a augmenté de 0.6% et l'indice d'hygiène de 0.2%. En ce qui concerne les soins personnels, le prix des produits de toilette a augmenté en moyenne de 0.7% et la coupe de cheveux pour hommes a augmenté chez certains coiffeurs. Diverses hausses de prix concernant les spécialités pharmaceutiques ont constitué la principale cause de la progression de l'élément hygiène. Au cours des 12 derniers mois, l'indice d'hygiène et de soins personnels a augmenté de 6.5%.

L'indice des loisirs, de la formation et de la lecture a augmenté de 0.5% et atteint 149.0 en janvier, contre 148.3 en décembre; cette hausse provient principalement d'une hausse des abonnements à Toronto, à Québec et dans certains autres centres.

January 1974, the Recreation, Education and Reading index advanced 5.3%.

In January 1974, the Tobacco and Alcohol index was unchanged from its December level of 136.9 and stood 1.2% above its level of January 1973.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between December and January, the total goods index advanced 0.8% with the largest increase being recorded for durable goods which rose 1.9% mainly in response to higher new car prices. The index for non-durable goods increased 0.8% mainly because of higher food prices. The component for semi-durable goods remained unchanged as lower clothing prices were offset by higher quotations for household furnishings. The services index rose 0.6% as increases were recorded in the shelter, transportation and health elements. In the twelve months to January 1974, the total goods index advanced 11.1% and that for services 6.5%.

Au cours des 12 mois précédant janvier 1974, l'indice des loisirs de la formation et de la lecture a progressé de 5.3%.

En janvier 1974, l'indice des tabacs et alcools n'a pas varié par rapport à son niveau de décembre (136.9); il est donc resté 1.2% au dessus de son niveau de janvier 1973.

Le classement par biens et services du mouvement des prix à la consommation permet de voir l'effet des variations de prix sous un autre angle. De décembre à janvier, l'indice total des biens a progressé de 0.8%, l'augmentation la plus importante concernant les biens durables; en effet ces derniers ont augmenté de 1.9%, principalement sous l'effet de la hausse du prix des voitures neuves. L'indice des biens non durables a augmenté de 0.8% principalement du fait de la hausse du prix des aliments. L'élément des biens semi-durables n'a pas varié; en effet, une baisse du prix de l'habillement a été contrebalancée par une hausse du prix des articles ménagers. L'indice des services a augmenté de 0.6% en effet, on a enregistré des hausses dans les éléments logement, transport, et hygiène. Au cours des douze mois précédant janvier 1974, l'indice des biens a progressé de 11.1% et l'indice des services de 6.5%.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES
 TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)	Month - Mois												Annual Annuel
	J	F	M	A	M	J	J	A	S	O	N	D	Annuel
(6) Industry selling price index: manufacturing - Indice des prix de vente dans l'industrie: industries manufacturières.	1970 119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.9	118.8	119.1
	1971 119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
	1972 124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
	1973 133.0	134.5	136.5	138.0	139.4	141.0	142.8	147.8	147.7	148.8	150.2	152.0	
	1974 156.1												

- (1) Indexes for 1972, 1973 and 1974 are subject to revision. - Les indices pour 1972, 1973 et 1974 sont sujets à révision.
- (2) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.
- (3) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (4) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés à total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (5) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (6) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

TABLE 3. SPECIFIED INDUSTRY SELLING PRICE INDEXES

industries and selected commodities(1)

1968 = 100

Month - Mois

Annual

Industries et certains produits(1)

Appuel

Other rubber products industry - Autre industrie des produits en caoutchouc.

03 169

Hoses, continuous molded - Tuyauteries souples moulées
d'une seule pièce.

03 1690 211

Hoses, horizontal reinforced - Tuyauteries souples à renfort horizontal.

03 1690 212

V — belts — Courroies trapézoïdales

03 1690 213

Foundation garments industry - Industrie des corsets et des soutiens-gorge.

07 2480

Girdles — Gaines

07 2480 034

Pantie girdles – Gaignes-culottes

07 2480 035

Corsets and corselettes – Corsets et corselettes

07 2480 036

Bandeaux bras — Soutiens-gorge courts

07 2480 037

longline bras - Soutiens-gorge longs

07 2480 038

Coffin and casket industry – Industrie des cercueils

08 2580

baskets and coffins (completely assembled) wooden hard-wood - Cerceuils et bières (complètement finis) en bois dur

08 2580 001

askets and coffins (completely assembled) wooden cloth covered - Cercueils et bières (complètement finis) en bois recouvert d'étoffe

08 2580 003

askets and coffins (completely assembled) metal, lined interior — Cercueils et bières (complètement finis) en métal, avec doublure ou rembourrage intérieur.

08 2580 004

wooden outer burial boxes - Boîtes extérieures ou doubles bières.

8 2580 009

ALL-ITEMS Consumer Price Index Converted to 1949=100 - January 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Janvier 1974 203.6

1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)

TABLEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)
(1961=100)

	Jan. 1974 Janv.	Dec. 1973 Déc.	Jan. 1973 Janv.	Dec. 1972 Déc.	1973	1972	1971
All-items - Indice d'ensemble	157.6	156.4	144.5	143.3	150.4	139.8	133.4
Food - Aliments	174.0	172.1	150.0	147.1	162.0	141.4	131.4
Food for home consumption - Aliments consommés à la maison	168.8	166.9	146.1	143.1	157.9	137.5	127.4

Shortening - Graisse végétale	148.2	143.1	122.8	119.2	129.2	121.8	118.7
Salad/cooking oil(2) - Huile à frire ou de table(2)	112.5	110.9
Salad dressing - Vinaigrette	123.1	123.2	111.2	111.1	114.2	109.9	105.4
Meat, poultry and fish - Viande, volaille et poisson	198.8	198.9	159.4	154.1	182.6	147.7	130.9
Meat - Viande	195.5	195.6	159.1	152.9	181.3	147.5	131.2
Beef - Boeuf	205.7	204.2	168.3	159.1	190.4	157.6	144.3
Sirloin steak - Bifteck de surlonge ..	185.2	180.4	158.2	148.0	176.1	152.4	143.4
Round steak - Bifteck dans la ronde ..	208.9	207.6	174.4	163.6	195.2	160.4	148.0
Prime rib roast - Rôti de côtes de choix	188.5	186.6	161.4	154.5	181.6	154.3	139.9
Blade roast - Rôti de palette	194.9	198.4	159.6	149.4	182.0	148.9	133.1
Stewing beef - Boeuf pour ragout	202.9	204.5	165.3	157.5	186.3	157.3	145.9
Hamburg - Boeuf haché	246.6	245.9	186.2	181.8	217.8	170.4	148.5
Liver - Foie	186.9	188.1	139.9	139.0	168.6	134.8	119.1
Pork - Porc	179.1	181.3	146.5	142.7	168.4	132.4	109.6
Bacon(3) - Bacon(3)	166.8	172.4	130.7	128.9	153.2	115.8	88.8
Smoked ham(4) - Jambon fumé(4)	175.3	178.7	136.1	135.4	158.8	125.7	110.7
Cottage roll - Roulé de haut d'épaule	189.4	189.8	146.1	143.9	176.9	135.0	110.9
Loin cuts - Coupes de longe	184.6	185.1	170.9	163.1	187.5	153.0	122.7
Shoulder cuts - Coupes d'épaule	188.6	190.9	145.0	135.6	173.8	128.0	120.4
Sausages - Saucisses	191.6	187.3	141.7	139.6	166.4	130.9	119.6
Other meat - Autres viandes	196.4	197.8	156.2	153.7	178.8	146.6	133.1
Wieners - Saucisses de Francfort	176.3	178.2	133.8	130.4	160.1	127.8	119.0
Veal - Veau	242.6	243.0	206.8	205.0	225.5	189.9	165.0
Canned meat - Viandes en conserve	189.2	187.5	128.6	127.7	151.5	123.3	123.0
Poultry - Volaille	181.2	182.5	132.3	131.3	164.3	124.6	108.9
Chicken - Poulet	180.4	180.2	136.9	135.3	169.1	128.9	112.0
Turkey - Dinde	170.2	175.1	112.3	114.1	140.4	105.4	95.8
Fish - Poisson	267.3	264.5	198.6	196.6	222.3	180.5	157.0
Canned salmon - Saumon en boîte	239.6	238.1	157.1	156.2	181.3	149.0	143.0
Canned tuna(2) - Thon en boîte(2)	114.6	114.2
Eggs - Oeufs	158.8	156.9	120.7	112.0	136.5	94.7	87.3
Fruit and vegetables - Fruits et légumes ..	167.9	161.8	150.2	144.6	166.7	139.8	130.5
Fresh fruit - Fruits frais	176.3	172.8	138.5	135.1	175.6	143.2	132.7
Oranges - Oranges	113.9	121.5	115.4	106.9	119.8	104.4	111.9
Bananas - Bananes	85.6	69.0	75.8	77.0	82.8	79.3	76.2
Apples - Pommes	177.2	177.5	119.6	118.1	160.0	123.8	118.8
Grapefruit - Pamplemousses	143.0	133.6	125.3	129.5	158.7	153.4	154.8
Processed fruit - Fruits traités	158.2	155.1	135.2	133.6	142.4	127.6	122.7
Canned peaches - Pêches en conserve	162.0	161.3	149.6	148.2	155.9	140.8	135.5
Canned pears - Poires en conserve	138.3	138.2	128.7	127.9	132.7	124.5	120.7
Canned apple sauce(2) - Compote de pommes en conserve(2)	131.3	125.3
Canned apple juice(3) - Jus de pommes en conserve(3)	174.5	168.4	129.5	130.7	138.3	122.0	110.4
Canned orange juice - Jus d'oranges en conserve	113.2	112.6	113.6	115.8	112.6	115.0	108.9
Raisins - Raisins secs	256.1	244.0	181.2	170.0	207.2	153.4	150.2
Fresh vegetables - Légumes frais	167.7	156.0	175.6	163.6	180.6	147.0	135.0
Potatoes - Pommes de terre	196.4	186.2	175.4	149.1	212.3	128.2	114.7
Tomatoes - Tomates	192.2	177.7	216.4	191.0	173.7	167.5	162.2
Lettuce - Laitue	146.6	135.4	198.6	220.6	189.3	162.9	160.8
Carrots - Carottes	112.0	112.9	121.8	117.6	126.6	124.9	123.4
Celery - Céleri	148.5	139.3	179.1	160.0	167.4	164.2	141.6
Onions - Oignons	177.5	172.3	173.0	173.5	221.6	157.9	128.5
Cabbage - Choux	193.4	160.3	187.8	170.0	199.1	171.9	150.4
Turnips - Navets	156.4	156.7	155.3	157.8	182.0	154.2	125.1

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) For explanation see page 94. - Pour de plus amples explications, voir la page 94.

f - First estimate based on a limited number of returns. - Premières estimations fondées sur un nombre limité de déclarations.

TABLE 14. Inter-City Indexes of Retail Price Differentials, as at May, 1971(1) Selected Groups of Commodities and Services, Winnipeg May 1971 Price Level=100

No.		Canada CPI weights — Ponderations dans l'I.P.C. pour le Canada	St. John's Nfld — Saint Jean (T.-N.)	Charlotte- town	Halifax
1	Food at home - Aliments consommés à la maison ...	23.6	109	109	103
	Dairy products - Produits laitiers	3.1	118	115	112
	Cereal and bakery products - Boulangerie et produits céréaliers	3.2	98	110	92
	Miscellaneous groceries - Denrées diverses	3.6	100	108	100
	Fats and oils - Huiles et matières grasses	1.3	104	105	99
	Eggs - Oeufs	0.9	167	127	106
	Meats, fish and poultry - Viande, poisson et volaille.	7.5	105	105	101
	Fruits and vegetables - Fruits et légumes	4.0	116	106	110
2	Household operation - Dépenses du ménage	9.9	114	115	114
	Furniture and appliances - Meubles et appareils	4.1	104	104	105
	Floor coverings, textiles, equipment - Revê- tements de sol, textile, matériel.	2.2	104	104	104
	Household supplies - Fournitures ménagères	1.5	112	111	109
	Household services - Services ménagers	2.1	144	149	146
3	Clothing - Habillement	11.3	105	101	99
	Men's wear - Vêtements pour hommes	2.6	104	103	103
	Women's wear - Vêtements pour dames	3.6	95	95	96
	Children's wear - Vêtements pour enfants	1.4	122	104	104
	Footwear, pc. goods, cloth. services, jewel- lery - Chaussures, tissus à la pièce, entre- tien des vêtements, joaillerie.	3.7	108	105	98
4	Transportation - Transports	12.0	109	105	104
	Private transportation - Transports privés	10.2	112	106	104
	New passenger cars - Voitures neuves	(5.1)	107	110	106
	Gasoline - Essence	(2.4)	118	108	105
	Other automobile operation - Autres frais de voiture.	(2.7)	118	95	101
	Public transportation - Transports publics	1.8	94	97	104
5	Health and personal care - Soins personnels et de santé.	6.6	101	102	112
	Health care - Soins de santé	4.4	102	105	117
	Personal care supplies - Fournitures pour les soins personnels.	1.2	109	112	114
	Personal care services - Services de soins personnels.	1.0	87	75	90
6	Recreation and reading - Loisirs et lecture	4.7	97	101	104
7	Tobacco and alcohol - Tabacs et alcools	6.5	126	112	111

(1) For explanatory text concerning this table, see page 96. As well, inter-city indexes of retail price differentials are now being updated on a component by component basis and will be published as they become available. Details can be found in the Retail Prices and Living Costs Service Bulletin (Statistics Canada Catalogue No. 62-005), Vol. 3. No. 1, March 1974.

TABLEAU 14. Indices comparatifs des prix de détail par ville, mai 1971(1) Groupes choisis de biens et de services, niveau des prix à Winnipeg en mai 1971=100

(1) Indexes for 1973 are subject to revision. Les indices pour 1973 sont sujets à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

- (1) Indexes for 1973 are subject to revision. - Les indices pour 1973 sont sujets à révision.
(2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
(3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
(4) This serie contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.
(5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
(6) Indexes for previous year will be revised one month at a time. - Les indices de l'année précédente seront révisés un mois à la fois.

Saskatchewan	168.1	137.6	124.9	132.1	144.9	147.1	154.6	
British Columbia - Colombie- Britannique	129.7	119.4	126.6	143.2	134.4	139.0	142.0	

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to
II.

Purchase Price Indexes of Secondary Metals (1969 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39 = 100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 - July 1973 were announced on November 6, 1973 for wheat, oats and barley.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Indices du prix d'achat des métaux de deuxième fusion (1969 = 100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39 = 100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t \ 35-39} \times P^2_{t \ 35-39} \times P^3_{t \ 35-39} \times \dots \times P^{30}_{t \ 35-39}}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de définir exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar, parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a une tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501) (catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t \ 35-39} \times P^2_{t \ 35-39} \times P^3_{t \ 35-39} \times \dots \times P^{30}_{t \ 35-39}}}$$

The selection of materials for pricing relates to groups as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to present usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according

L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantités de qualité constantes; il comprend uniquement les biens et services pour lesquels il y a des prix observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère

their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to selected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they measure, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing

power, and falling prices are associated with increasing purchasing power. The category of goods presents three sub-categories (durable goods, semi-durable goods, non-durable goods) determined in function of the average useful lifetime criteria. Durable goods, on the other hand, have been sub-divided according to broad functional categories.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). A l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. A partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

A mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est

power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is \$90.91 ($(100.0/110.0) \times 100$), which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B

liée à la baisse du pouvoir d'achat de la monnaie, et la baisse de prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice de prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P. avaient progressé de 44,5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144,50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cent ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (Tableau 12) doivent noter que, comme dans le cas de l'indice de prix à la consommation dont il a été tiré, il peut ne pas suivre près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., in n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait compte les changements de prix à la consommation peut être calculée en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des salaires moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surestimer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surestimation peut être réduite en réduisant le chiffre de \$100 au montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 ($(100.0/110.0) \times 100$), que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que

adjusted figure of \$90.91. Assuming the week A average of 100 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 10% rise in money wages $((\$100.00-\$80.00/\$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is 129.8 $((146.23/142.0) \times 100)$. (The wage and the price index both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, wage data adjusted by the consumer price index (which is a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce wages to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real

la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00-\$80.00/\$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est 129.8 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résumant assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de

wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city,

la rémunération effective ne sert pas à mesurer les variations niveaux de consommation des salariés ou de leurs familles, n'plutôt à montrer les tendances du pouvoir d'achat des salariés rapport aux articles contenus dans l'indice; enfin, l'indice ne pr pas en compte les autres revenus des familles (tels que allocations familiales) ou les variations de l'épargne familles.

La période de référence du tableau qui présente les sal tant réels (en dollars courants) qu'effectifs (en dollars constai prend pour base l'année 1961. En fait, on peut choisir n'imp quelle période de référence comme base, puisque les taux variation entre deux périodes seront les mêmes quelle que soi période de référence choisie.

On peut obtenir plus de renseignements sur le tableau en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

A l'origine, la statistique des différences entre les prix détail d'une ville du Canada à l'autre a été mise au point p l'alimentation; par la suite, on l'a étendue à d'autres postes budget familial tels que l'habillement, les transports, l'entret du ménage, la santé et les soins personnels, les loisirs, la format et la lecture, et le tabac et l'alcool. Au total, les comparai d'une ville à l'autre portent sur des biens et des services con tuant près des trois quarts du budget servant actuellemen construire l'indice des prix à la consommation au Canada, la se grande omission étant le logement (location et frais de post sion). Sans vouloir nier l'importance des différences en ce concerne le logement dans toute comparaison globale du niv général des prix auxquels les consommateurs doivent faire f dans divers centres urbains, il faut bien dire que les problèmes comporteraient l'établissement d'une comparaison valable d' ville à l'autre sont tels qu'ils nécessitent plus de recherc Entre-temps, on estime que malgré l'absence actuelle de donn sur les dépenses de logement, la publication de comparai prix de détail pour d'autres postes du budget permettra de faire gros progrès en ce qui concerne la satisfaction des besoins va des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour mesures de prix de détail tirées précédemment jusqu'à mai 19 ainsi que des données plus complètes sur plusieurs villes. l'explication plus détaillée de l'étude dont le tableau en question tiré figure dans les livraisons de novembre 1968, novembre 19 et avril 1972 de *Prix et indices des prix* (no 62-002 catalogue).

Les premières données de base pour la présente étude été constituées par l'importante collection de prix de dét recueillie lors de la confection des indices nationaux et urbains prix à la consommation. Au moment d'établir ces comparai géographiques de prix, on s'est efforcé d'assurer la comparabi en prenant des biens et des services de qualité égale et assortissant autant que possible les points de vente au détail type. Les relations de prix entre paires de villes on été calcul puis converties à la base commune des prix de Winnipeg = 1 afin de faciliter des comparaisons pour l'ensemble de toutes villes. Sauf pour les denrées alimentaires et les voitures neuve pour lesquelles les différences de prix entre villes ont été tir directement de nouvelles comparaisons fondées sur les données mai 1971, la mise à jour de ces mesures des différences de prix détail entre les villes a été assurée grâce à l'extension des mou

for the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the items covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond the budget groupings are not shown.

The weighting factors used to combine items to group component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. The data have been modified to reflect 1961 prices and weights. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time

Farm Input Price Indexes replace one of the two component indexes of the previously published series, Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replace the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is

presented in the form of a table of relative prices at the level of each article in each city for the periods observed according to the calculation established on the basis of the index of prices at the consumption level for the city in question. These relations between prices at the level of the article have been aggregated on the basis of the consumption habits of the citizen for the whole of Canada and not on the basis of the consumption habits applicable to individual cities. Even if there are differences in the consumption habits of one city to another, the importance of these differences in what concerns the cities of which it is a question here is not sufficient to influence sensibly the majority of the geographical comparisons. Due to the absence of relations of prices in what concerns housing, of which it has already been a question above and which might have a considerable importance each time that one would like to draw a global comparison between the differences of prices at the consumption level at the detail of one city to another, one does not find here any synthetic index aggregated beyond the principal components of the budget.

The weighting factors used to combine items to group articles in groups and in elements in Table 14 are based on the expenditures of 1957; they are not therefore identical to the weighting factors of 1967 adopted in May 1973 in the tables of relative prices at the consumption level.

It must be noted that the retail prices used in this comparison, being those that the consumer must pay, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices de prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est

reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes*, 1961=100, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the *Globe and Mail* and the *Montreal Gazette*. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of price in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new subgroups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (re-named Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Investors index and Preferred Index, see *Prices and Price Indexes* for February 1973.

reprise dans *Prices and Price Indexes* de septembre 1971 (62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes*, 1961=100 (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour famille agricole des séries de 1935-39 par un équivalent à jour on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un investisseur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture à la Bourse du jeudi indiqués dans le *Globe and Mail* et dans le *Montreal Gazette*. Pour les actions privilégiées, les prix sont des moyennes pondérées mensuelles. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines, matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et papiers, huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe des banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de février 1973.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. Comparison of these series with the implicit price deflator (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI (2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rates of material supplied by the Labour Standards Branch, Department of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining components with the weights as shown will not provide a composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (no 62-002). This index is found in Table 20 of *Prices and Price Indexes* (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (no 62-006).

Industry Selling Price Indexes 1956-1968 Cat.
no 62-528.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices—and—Price—Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtes a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.(2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

- (1) Division du produit national brut, Statistique Canada.
- (2) *Indices des prix de vente dans l'industrie, 1956-1968*, no 62-528 au catalogue.

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyennant des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux de métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 & 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but they can be used to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction cost indexes but rather for units of construction work put in place, such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as water supply pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by determining characteristics of the contracts and the bid items, such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are the prices paid by government departments to suppliers.

Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and operating electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure prices would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. The indexes introduced in this publication have certain short-comings. Nonetheless, they may be helpful for the purposes provided the users understand the deficiencies. The reader is asked to make particular note of Section III, Occasional Paper Catalogue 62-526 Price Indexes of Electric Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component prices and their weights included in the aggregate indexes presented herein are inappropriate for a particular project the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certain matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se reporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de

utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans certains cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation de variation du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou postes de manoeuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses de main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de transformation et les postes de manoeuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage sont exclus.

Par définition, l'expression "service d'électricité communautaire" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées de déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de l'enquête.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which are described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in the indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and general sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de baraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

(1) Available in English only.

(2) A comprehensive statistical report on wholesale, farm consumer and security prices and price indexes covering intensively the period 1949-52 and more broadly earlier periods, in some cases from 1913; brief text is included.

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Statistics Canada, or to the Queen's Printer, Ottawa, Canada.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- . . Figures not available.
- . . . Figures not appropriate or not applicable.
- Nil or zero.
- - Amount too small to be expressed.
- p Preliminary figures.
- r Revised figures.
- x Confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- . . Nombres indisponibles.
- . . . N'ayant pas lieu de figurer.
- Néant ou zéro.
- - Nombres infimes.
- p Nombres provisoires.
- r Nombres rectifiés.
- x Confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) rose 1.3% in February to 158.9 from the January index of 156.8. It was 18.1% higher than the February 1973 index of 134.6.

In terms of the relative contribution to the overall change in the total manufacturing index, the more noticeable increases were recorded in the foods and beverages group (1.5%) particularly in the sugar refineries (22.3%) and dairies (8.8%) which were slightly offset by a significant decrease in the slaughtering and meat packing plants (-0.8%). Increases also occurred in the miscellaneous manufacturing group (8.2%) reflecting higher prices registered in the jewelry and silverware manufacturing (12.5%). Price increases recorded for iron and steel mills (2.5%) were mainly responsible for advances in the primary metals group (1.4%). Decreases were relatively insignificant during the month of February.

NOTES SUR LES PRIX ET LES INDICES DE PRIX

Indice des prix de vente de l'industrie: industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'industrie (pour l'ensemble des industries manufacturières) a progressé de 1.3% en février pour passer à 158.9 contre 156.8 en janvier. Il a été de 18.1% plus élevé que l'indice de février 1973 (134.6).

Les principaux facteurs qui ont contribué à faire monter l'indice d'ensemble ont été une hausse dans le cas du groupe des aliments et boissons (1.5%) où les raffineries de sucre ont grimpé de 22.3% et les brasseries de 8.8%. Ces hausses ont été légèrement neutralisées par une baisse de 3.4% dans le cas de l'abattage et du conditionnement de la viande. Les industries manufacturières diverses ont monté de 8.2%, traduisant une hausse de prix de 12.5% dans la fabrication de bijouterie et d'orfèvrerie, et les prix dans la sidérurgie ont monté de 2.5% pour pousser la première transformation des métaux à avancer de 1.4%. Les diminutions en février ont été de peu d'importance.

Figures not available. - Les chiffres ne sont pas disponibles.

General Wholesale Price Index (1935-39=100)

The general wholesale price index rose 1.6% in February to 434.8 from the revised January index of 427.9. It was 26.3% higher than the February 1973 index of 344.2. Six of the eight major group indexes were higher, one declined, while one remained constant.

The animal products group index declined 1.6% to 487.0 from the revised January index of 495.1, lower by 6.0% from the peak of 516.3 in August 1973. From January to February decreases were noted for livestock, fresh meats and cured meats.

The textile products group remained relatively unchanged in February from the revised January Index.

An advance of 5.3% to 396.2 from the revised January index of 376.2 in the non-ferrous metal products group index reflected sharp price increases for silver. The vegetable products group index rose 4.5% in February to 459.1 from the revised January index of 439.3 on higher prices for sugar and its products and rubber and its products. The iron products group index moved 2.0% higher to 395.1 from 387.3. The chemical products group index increased 1.6% to 292.1 from 287.6. Advances to a lesser degree were noted in two major group indexes: non-metallic minerals products, 0.7% to 286.7 in February from the revised index of 284.6. wood products, to 534.2 from the revised January index of 533.2.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a grimpé de 1.6% février pour atteindre 434.8 contre 427.9 en janvier. Il a été 26.3% supérieur à l'indice de février 1973 (344.2). Les indices des huit groupes principaux ont monté, l'indice d'un groupe baissé et celui d'un autre est demeuré stationnaire.

L'indice du groupe des produits d'origine animale a diminué de 1.6% passant de 495.1 en février à 487.0, il a également de 6.0% inférieur au sommet atteint en août 1973 (516.3). On a observé en février une baisse du prix du bétail et des viandes fraîches et salées.

Le groupe des produits textiles est demeuré relativement inchangé en février par rapport à l'indice révisé de janvier.

Les fortes hausses de prix de l'argent ont poussé le groupe des métaux non ferreux à avancer de 5.3% passant de 376.2 à 396.2. Les hausses du prix du sucre et du caoutchouc et produits à base de ces matières ont fait monter de 4.5% l'indice du groupe des produits d'origine végétale, qui est passé de 439.3 à 459.1. L'indice du groupe des produits du fer a avancé de 2.0% passant de 387.3 à 395.1 et l'indice du groupe des produits chimiques a monté de 1.6% pour atteindre 292.1 contre 287.6. L'indice du groupe des minéraux non métalliques s'est élevé de 0.7% passant de 284.6 à 286.7 et l'indice des produits du bois a peine monté, passant de 533.2 à 534.2. L'indice du groupe des matières textiles est demeuré inchangé.

*These indexes are preliminary. - Ces indices sont provisoires.

urity Price Indexes (1961=100)

The investors' index of common stocks increased 2.2% to 184.4 in February. Both industrials and utilities moved up 1.7% to 197.8 and 137.4 respectively, while finance increased 3.5% to 185.9. The thirteen industrial sub-groups showed ten increases and two decreases; construction showed the largest increase (9.0%) to 171.5. For utilities, all sub-groups showed a slight increase. An advance in finance is due to a 3.5% increase to 222.7 in banks and a 3.5% increase to 127.4 in investment and loan.

In the same period, the index of mining stock prices increased 5.2% to 169.9 reflecting a 7.1% increase to 277.0 in base metals and a 2.8% increase to 112.7 in base metals.

Of the two supplementary indexes, uranium showed a 5.1% increase to 323.1, while primary oils and gas dropped 0.8% to 488.6.

The preferred stock index advanced slightly 0.6% to 70.4.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 0.5% to 406.1 in February from the January index of 408.1. A decrease of 3.4% to 512.5 from 530.4 in the January products index reflected lower prices for steers on the Eastern and Western markets, and for lambs, raw wool, hogs and hogs in the West. Higher prices were shown for fluid milk on both markets, and for fluid milk and lambs in the East, and for eggs in the West.

The field products index moved 4.9% higher to 299.7 from 285.8 on price increases for potatoes on both markets, wheat, corn and rye in the East, and for flax in the West. Higher prices were shown for rye in the West.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 1.7% to 465.0 in February from the revised January index of 457.4. Increases were higher for eight commodities, lower for seven and unchanged for fifteen. Principal changes included increases in raw sugar, cottonseed oil, tin, oats, steel sheets, steel, spruce lumber and hogs while decreases were recorded in raw cotton, steers, raw rubber, raw wool, iron ore, and sulphite pulp and wheat.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours des actions ordinaires a augmenté de 2.2% en février, pour s'établir à 184.4. Les industrielles et les services publics ont tous deux progressé de 1.7% pour atteindre 197.8 et 137.4 respectivement, tandis que les finances ont augmenté de 3.5% pour se fixer à 185.9. Dans les treize sous-groupes industriels, il y a onze gains contre deux pertes: la hausse la plus importante a été enregistrée dans les valeurs de la construction, progressant de 9.0% pour se stabiliser à 171.5. En ce qui concerne les services publics, tous les sous-groupes montrent une légère augmentation. La hausse de l'indice des finances est causée par un gain des indices bancaires de 5.6% (222.7) ainsi que d'une augmentation de 3.5% des valeurs des placements et prêts (127.4).

Au cours de la même période, l'indice des prix des titres miniers a augmenté de 5.2% pour atteindre 169.9, à la suite d'une augmentation de 7.1% des aurifères qui s'inscrivent à 277.0, et à un gain de 2.8% des actions des métaux communs qui se sont fixés à 112.7.

Pour ce qui est des deux indices de prix supplémentaires, on a observé une hausse de 5.1% dans le cas de l'uranium qui s'est fixé à 323.1, tandis que le pétrole et le gaz primaires accusaient une baisse de 0.8% et tombait à 488.6.

L'indice des actions privilégiées a légèrement avancé (0.6%) pour s'établir à 70.4.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a régressé de 0.5% pour atteindre 406.1 en février contre 408.1 en janvier. La baisse de 3.4% de l'indice des prix des produits d'origine animale, qui est passé de 530.4 à 512.5, s'explique par la baisse du prix des bouvillons dans l'Est et dans l'Ouest et des agneaux, de la laine brute des vaches et des porcs dans l'Ouest. On a observé une augmentation du prix du lait de fromagerie sur les deux marchés, du lait liquide et des agneaux dans l'Est et des oeufs dans l'Ouest.

L'indice des prix des produits de grande culture a monté de 4.9% passant de 285.8 à 299.7, en raison d'une hausse du prix des pommes de terre sur les deux marchés, de l'avoine, du maïs et du seigle dans l'Est et du lin dans l'Ouest. On a remarqué une baisse du prix du seigle dans l'Ouest.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a progressé de 1.7% pour atteindre 465.0 en février contre 457.4 en janvier (indice rectifié). Le prix de huit produits a monté, celui de sept a baissé et celui de quinze est demeuré stationnaire. Les principales variations comprennent une hausse du prix du sucre brut, de l'huile de coton, de l'étain, de l'avoine, des tôles d'acier, des déchets d'acier, du bois d'épinette et des porcs ainsi qu'une baisse du prix du coton brut, des bouvillons, du caoutchouc brut, de la laine brute, du minerai de fer, de la pâte au sulfite blanchie et du blé.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) rose 1.0% to 159.2 in February from 157.6 in January with about three-fifths of the increase being attributable to a 2.3% advance in the food price level. Lesser increases were registered for all other major index components. All-Items other than Food rose 0.5% with the main contributor being Housing which advanced 0.6%. The index for Tobacco and Alcohol went up by 1.4% and that for Health and Personal Care by 0.7%. The elements for Clothing and for Recreation, Education and Reading both advanced by 0.5% and Transportation edged up 0.2%. Between February 1973 and February 1974, the All-Items Index advanced 9.6%.

The Food index advanced 3.3% to 177.9 in February from 174.0 in January as home-consumed food prices moved up, on average, by 2.6% and prices of food eaten away from home rose 0.9% to a level 17.2% above a year ago. Major contributors to the food at home increase in the latest month were sharply higher prices for beef, potatoes and sugar-related commodities, though many other foodstuffs also registered advances. In contrast, pork and egg prices moved downwards between January and February. The index for meat, poultry and fish rose 2.9% as beef prices went up, on average, by 7.0%. The poultry index rose 1.6% but pork quotations fell 1.9% to record their fifth consecutive monthly decline. Over the twelve months since February 1973, poultry and beef prices advanced by over 34% and 25%, respectively, and pork rose by over 13%. Egg prices fell 4.8% between January and February but were still retailing over 26% above their level of twelve months previous. The fruit and vegetable index registered a 4.7% rise in the latest month with the main impetus coming from an advance of over 29% in potato prices. The cereal and bakery products index rose 1.4% between January and February as most items surveyed registered increases. Higher cheese prices in a number of cities were the major cause of a rise of 0.7% in the index for dairy products and, led by increased margarine prices, the fats and oils component rose 2.0%. Amongst other food items, there was a notable advance in the price of sugar which moved up a further 17% to register an advance of nearly 60% since the beginning of the year; chocolate bars retailed 20% higher in February than two months previous. Soft drink prices moved up by 4.3% in the latest month, reaching a level fractionally above that of a year earlier just prior to the removal of the federal sales tax. In the twelve months to February 1974, the Food index moved up 17.4% with the price of food for home consumption registering a 17.3% advance.

The Housing index rose 0.6% to 159.4 in February from 158.4 in January as a result of increases of 0.7% and 0.6% in the shelter and household operation components, respectively. Within shelter, the homeownership element moved up 0.9% mainly because of increases in the indexes for mortgage interest, new houses and homeowner repairs; rents edged up 0.2%. Among household operation items, higher electricity rates were reported in some centres and furniture

Mouvements des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961=100) est passé de 157.6 en janvier à 159.2 en février, une progression de 1.0%; environ les trois cinquièmes de cette augmentation sont attribuables à la hausse de 2.3% de l'indice des prix des aliments. Des augmentations moindres ont été enregistrées pour toutes les autres composantes principales de l'indice. L'indice d'ensemble, sans les aliments, a progressé de 0.5%; cette hausse est attribuable en grande partie à l'indice de l'habitation qui a augmenté de 0.6%. L'indice des tabacs et alcools a progressé de 1.4% et celui de soins personnels et de l'hygiène, de 0.7%. Les indices de l'habillement et des loisirs, de la formation et de la culture ont tous les deux avancé de 0.5% et celui des transports a monté de 0.2%. De février 1973 à février 1974, l'indice d'ensemble a avancé de 9.6%.

L'indice des aliments a augmenté de 2.3%, passant de 174.0 en janvier à 177.9 en février, à la suite d'une hausse moyenne de 2.6% des prix des aliments consommés à la maison et d'une hausse de 0.9% de l'indice des repas pris à l'extérieur qui a atteint un niveau de 17.2% supérieur à il y a un an. La hausse des prix des aliments consommés à la maison au cours du mois dernier, était principalement aux fortes augmentations du prix du boeuf, des pommes de terre et des produits du sucre, bien que plusieurs autres produits alimentaires aient également enregistré des hausses. En revanche les prix du porc et des oeufs ont baissé entre janvier et février. L'indice de la viande, de la volaille et du poisson a progressé de 2.9% alors que le prix du boeuf a augmenté d'une moyenne de 7.0%. L'indice de la volaille a augmenté de 1.6% et les prix du porc ont fléchi de 1.9%, ce qui constitue la cinquième baisse mensuelle consécutive. Au cours des douze derniers mois, les prix de la volaille et du boeuf ont grimpé de plus de 34% et 25% respectivement, et ceux du porc ont augmenté de plus de 13%. Les prix des oeufs ont baissé de 4.8% entre janvier et février mais le prix de vente au détail dépassait encore de 26% celui d'il y a un an. L'indice des fruits et des légumes a enregistré une hausse de 4.7% au cours du mois dernier à la suite principalement d'une hausse de 29% du prix des pommes de terre. L'indice des céréales et des produits de boulangerie a progressé de 1.4% de janvier à février alors que la plupart des produits observés enregistraient des augmentations. La hausse du prix du fromage dans certaines villes a contribué en grande partie à faire monter de 0.7% l'indice des produits laitiers et la hausse du prix de la margarine, a progressé de 2.0% l'indice des huiles et des corps gras. Parmi les autres aliments, on a observé une hausse sensible du prix du sucre qui a encore grimpé de 17% pour enregistrer une avance de presque 60% depuis le début de l'année; les tablettes de chocolat se vendaient au détail 20% plus cher en février qu'il y a deux mois. Le prix des boissons gazeuses a monté de 4.3% au cours du mois dernier, pour atteindre un niveau légèrement supérieur à celui de l'an dernier juste avant que l'on abolisse la taxe de vente fédérale. Au cours des douze derniers mois, l'indice des aliments a progressé de 17.4% alors que le prix des aliments consommés à la maison augmentait de 17.3%.

L'indice de l'habitation a progressé de 0.6% pour passer de 158.4 en janvier à 159.4 en février, par suite des augmentations de 0.7% et de 0.6% des éléments logement et dépenses de ménage respectivement. Pour ce qui est du logement, l'élément principal a grimpé de 0.9% surtout à cause des augmentations des indices des intérêts hypothécaires, des maisons neuves et des réparations à la charge du propriétaire; les loyers ont progressé de 0.2%. Dans le cas des dépenses de ménage, le prix de l'électricité a mo

otations rose 0.8%, on average. Among other home furnishings, linen and draperies, floor coverings and flatware are higher in price. Household supply items rose 1.4%, on average, as all items surveyed recorded increases, and the index for household services advanced 0.5%. Between February 1973 and February 1974, the Housing index rose 7.0%.

The Clothing index advanced 0.5% to 145.5 in February from 144.8 in January thus contrasting with the declines that have occurred between these two months in the previous years. Although seasonal sale prices were in effect on many articles, most items recorded increases reflecting, in part, higher prices for materials used in clothing, such as synthetic fabrics, cotton and wool. The major contributors to the latest rise in the clothing index were women's wear and footwear which increased 0.7% and 1.4%, respectively. Children's wear prices went up, on average, 0.2% and the piece goods index advanced 0.7%. The index for men's wear edged up 0.2%, however, mainly because of seasonal sale prices. In the twelve months to February 1974, the Clothing index rose 8.3%.

The Transportation index rose 0.2% to 143.8 in February from 143.5 in January as an increase in the private transportation element outweighed a decline in the component for public transportation. The main contributor to the 0.2% rise in private transportation was a 3.4% increase in the index for automobile insurance. Motor oil prices rose 1.3% following increases in some outlets in a number of cities but there was a marginal decline in the gasoline index. The public transportation component fell 0.6% as a decline in the index for train rates outweighed some higher taxi and inter-city bus fares. In the twelve-month period ending February 1974, the Transportation index advanced 7.7%.

The Health and Personal Care index rose 0.7% to 163.0 in February from 161.8 in January as the result of a 1.2% rise in the personal care component. Personal care services advanced 2.3% following increases in women's hairdressing and men's haircut charges in a number of centres, while expenditures for toiletry items edged up, on average, 0.2%. Between February 1973 and February 1974, the Health and Personal Care index rose 6.7%.

The Recreation, Education and Reading index rose 0.5% to 149.8 in February from 149.0 in January as a result of increases in the reading and recreation elements. The Reading index advanced 1.9% in response to some higher magazine and newspaper subscription rates. Increased movie admission charges in a number of cities and widespread price advances for camera film (including processing) were major contributors to a rise of 0.4% in the recreation component. In the latest twelve months, the Recreation, Education and Reading index rose 5.4%.

The Tobacco and Alcohol index rose 1.4% to 138.8 in February from 136.9 in January as a result of widespread increases in the price of beer for home consumption. In the

dans certaines villes et le prix des meubles a augmenté en moyenne de 0.8%. Pour ce qui est des autres articles d'ameublement, le prix du linge de maison, des rideaux, des revêtements de sol et des couverts s'est élevé. Les éléments fournitures de ménage ont avancé en moyenne de 1.4% tandis qu'on a enregistré des augmentations pour tous les articles observés et l'indice des services de ménage a progressé de 0.5%. De février 1973 à février 1974, l'indice de l'habitation s'est accru de 7.0%.

L'indice de l'habillement s'est accru de 0.5% passant de 144.8 en janvier à 145.5 en février par opposition aux diminutions qui se sont produites durant ces deux mois au cours des quatre années précédentes. Même si les prix de vente saisonniers s'appliquaient à certains articles, la plupart des articles ont enregistré des hausses à cause, en partie, du prix plus élevé des matières utilisées dans l'habillement comme les tissus synthétiques, le coton et la laine. Les principaux responsables de cette dernière hausse de l'indice de l'habillement ont été les vêtements pour femmes et les chaussures qui ont augmenté de 0.7% et de 1.4% respectivement. Le prix des vêtements pour enfants a progressé en moyenne de 0.2% et l'indice des tissus à la verge s'est élevé de 0.7%. L'indice des vêtements pour hommes a baissé de 0.2%, à cause surtout des prix de vente saisonniers. De février 1973 à février 1974, l'indice de l'habillement a progressé de 8.3%.

L'indice des transports a progressé de 0.2%, passant de 143.5 en janvier à 143.8 en février; la hausse de l'élément des transports privés a eu en effet plus de poids que la baisse de l'élément des transports publics. La hausse de 0.4% de l'indice des transports privés a été causée par une augmentation de 3.4% de l'indice de l'assurance-automobile. Le prix de l'huile à moteur a progressé de 1.3% par suite des augmentations observées dans quelques points de vente d'un certain nombre de villes, mais il y a eu baisse très légère de l'indice de l'essence. L'élément des transports publics a diminué de 0.6%, la baisse de l'indice des tarifs de transport ferroviaire ayant eu plus de poids que la hausse de certains tarifs de transport par taxi et de transport interurbain par autobus. De février 1973 à février 1974, l'indice des transports a progressé de 7.7%.

L'indice des soins personnels et de l'hygiène a avancé de 0.7%, passant de 161.8 en janvier à 163.0 en février, en raison d'une augmentation de 1.2% de l'élément des soins personnels. Les services de soin personnel ont progressé de 2.3% par suite d'une hausse des frais de coiffure pour dames et pour hommes dans un certain nombre d'agglomérations; le prix des articles de toilette a par ailleurs marqué une légère avance de 0.2% en moyenne. De février 1973 à février 1974, l'indice des soins personnels et de l'hygiène a progressé de 6.7%.

L'indice des loisirs, de la formation et de la lecture a progressé de 0.5%, passant de 149.0 en janvier à 149.8 en février, en raison de la hausse des éléments lecture et loisirs. L'indice de lecture a avancé de 1.9% à la suite de la hausse des tarifs d'abonnement aux revues, magazines et journaux. La hausse du prix d'entrée au cinéma dans un grand nombre de villes et l'augmentation générale du prix des films pour appareils photo (y compris le développement) sont principalement responsables de la progression de 0.4% de l'élément loisirs. Au cours des douze derniers mois, l'indice des loisirs, de la formation et de la lecture a avancé de 5.4%.

L'indice des tabacs et alcools a progressé de 1.4%, passant de 136.9 en janvier à 138.8 en février en raison principalement de la hausse générale du prix de la bière consommée à la maison. Au

latest twelve months, the Tobacco and Alcohol index rose 2.3%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between January and February, the total goods index advanced 1.3% with the largest increase being recorded for non-durable goods which rose 1.7% mainly in response to higher prices for food, beer and household supplies. The index for semi-durable goods rose 0.5% largely because of increased quotations for clothing, footwear, linen and draperies, and the component for durable goods edged up 0.2% mainly in response to higher furniture prices. A rise of 0.6% was recorded for the services index following increases in the shelter, transportation, health and recreation elements. In the twelve months to February 1974, the total goods index advances 11.7% and that for services 6.5%.

cours des douze derniers mois, l'indice des tabacs et alcool avancé de 2.3%.

Si l'on classe par biens et services les articles qui entrent dans l'indice des prix à la consommation, on obtient une image différente de l'incidence de la variation des prix. De janvier à février, l'indice d'ensemble des biens a progressé de 1.3%, les biens non durables enregistrant l'augmentation la plus élevée (1.7%) en raison principalement de la hausse du prix des aliments, de la bière et des fournitures de ménages. L'indice des biens semi-durables a progressé de 0.5% à la suite de la hausse du prix des vêtements, des chaussures, du linge de maison et des rideaux. L'élément biens durables a monté de 0.2% en raison principalement de la hausse du prix des meubles. On a enregistré une progression de 0.6% de l'indice des services à la suite des augmentations observées dans le cas des éléments suivants: logement, transport, hygiène et loisirs. Au cours de la période de douze mois se terminant en février 1974, l'indice d'ensemble des biens a progressé de 11.7% et celui des services, de 6.5%.

	Month - Mois												Annuel
	J	F	M	A	M	J	J	A	S	O	N	D	
	1971												
	1972												
	1973												
	1974												
(6) Industry selling price index, manufacturing - Indice des prix de vente dans l'industrie, industries manufactu- rières.	1970 119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.9	118.8	119.1
	1971 119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
	1972 124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
	1973 133.1	134.6	136.5	138.0	139.4	141.0	142.8	147.8	147.7	148.8	150.2	152.0	142.7
	1974 156.8	158.9											

(1) Indexes for 1972, 1973 and 1974 are subject to revision. - Les indices pour 1972, 1973 et 1974 sont sujets à révision.

(2) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.

(3) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

(4) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés p total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.

(5) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.

(6) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88

Industries and selected commodities(1)

1968 = 100

Month — Mois

Annual

Industries et certains produits(1)

Annuel

Other rubber products industry - Autre industrie des produits en caoutchouc.

03 1690

Hoses, continuous molded — Tuyauteries souples moulées
d'une seule pièce.

03 1690 211

Hoses, horizontal reinforced — Tuyauteries souples à renfort horizontal.

03 1690 212

V — belts — Courroies trapézoïdales

03 1690 213

Foundation garments industry – Industrie des corsets et des soutiens-gorge.

07 2480

Girdles — Gaines

07 2480 034

Pantie girdles – Gaignes-culottes

07 2480 035

Corsets and corselettes — Corsets et corselettes

07 2480 036

Bandeaux bras – Soutiens-gorge courts

07 2480 037

ongline bras - Soutiens-gorge longs

7 2480 038

lin and casket industry — Industrie des cercueils

08 2580

askets and coffins (completely assembled) wooden hard-
wood — Cerceuil et bière (complètement finis) en bois

B 2580 001

askets and coffins (completely assembled) wooden cloth covered — Cercueils et bières (complètement finis) en bois recouvert d'étoffe

3 2580 003

baskets and coffins (completely assembled) metal, lined interior — Cercueils et bières (complètement finis) en métal avec doublure au rembourrage intérieur

2580 004

outer burial boxes - Boîtes extérieures ou doubles bières.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - February 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Février 1974 205.7

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further information see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) April 1973=100. - Avril 1973=100.

(3) On a 1961=100 time base as of May 1973. - Sur base 1961=100 à partir de mai 1973.

(4) Indexes based on chain store prices in 34 cities. - Les indices sont basés sur les prix des magasins à succursales dans 34 villes.

TABLE 10. Consumer Price Index for Canada - Reclassified by Goods and Services(1)

TABLEAU 10. Indice des prix à la consommation - Reclassé par biens et services(1)

(1961 = 100)

	Feb. 1974 Fév.	Jan. 1974 Janv.	Feb. 1973 Fév.	Jan. 1973 Janv.	1973	1972	1971
Goods - Biens	152.2	150.2	136.3	135.2	142.3	130.8	125.1
Durable goods - Biens durables	113.0	112.8	107.7	107.8	109.2	107.7	106.4
Automobiles - Automobiles	108.7	108.7	103.8	103.8	104.8	104.3	102.3
Furniture and floor covering - Meubles et revêtements de sol	139.1	137.8	127.2	127.3	131.6	125.8	123.1
Household appliances and equipment - Appa- reils et accessoires ménagers	109.7	109.6	105.4	105.4	106.9	104.8	103.2
Home entertainment and recreation equipment - Matériel récréatif	97.3	97.3	96.7	96.7	96.8	97.3	100.8
Semi-durable goods - Biens semi-durables	143.1	142.4	133.2	133.4	136.9	131.0	127.9
Clothing, footwear and piece goods(2) - Vêtements, chaussures, et tissus à la verge(2)	142.6	142.0	132.3	132.6	136.0	130.3	127.4
Household furnishings and utensils - Articles d'ameublement et articles ménagers	152.9	150.9	138.6	137.8	143.2	135.5	132.0
Other semi-durable goods(3) - Autres biens semi-durables(3)	142.4	141.5	135.5	135.5	138.6	132.7	128.3
Non-durable goods(4) - Biens non durables(4)	165.4	162.6	144.8	143.0	152.7	136.9	129.3
Non-durables excluding food - Biens non durables sans les aliments	143.7	142.7	133.1	132.1	136.3	129.5	125.9
Alcoholic beverages - Boissons alcooliques	133.7	130.5	128.6	128.5	129.5	126.3	122.5
Tobacco products - Produits du tabac	146.4	146.4	146.3	145.4	146.2	140.7	137.7
Domestic supplies - Fournitures de ménage	131.8	130.2	124.0	123.1	126.7	120.9	118.4
Health and personal care supplies - Pro- duits pour l'hygiène et les soins personnels	118.6	118.4	115.8	115.1	116.5	114.0	112.1
Other non-durables - Autres biens non durables	158.9	158.4	138.3	136.5	144.8	133.9	129.3
Services	174.4	173.4	163.7	162.8	167.6	157.9	150.1
Shelter services - Habitation	175.3	174.3	165.1	163.9	169.0	157.9	149.7
Household utilities - Services publics aux ménages	136.9	136.0	128.8	128.8	130.8	122.3	119.6
Domestic services - Services aux ménages	216.4	214.2	193.9	192.0	196.6	183.8	170.8
Health, personal care, and clothing services - Hygiène, soins personnels et services vestimentaires	183.9	182.3	166.8	166.1	173.3	161.9	152.7
Recreation, education, and communication services - Loisirs, formation et communications	154.5	154.0	149.0	148.3	151.2	144.7	137.9
Transportation services - Transports	186.5	185.1	175.3	175.5	179.2	174.8	168.1

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(3) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

- (1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à révision.
(2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
(3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
(4) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.
(5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
(6) This serie contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractor profit and productivity. - Cette serie comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 - July 1973 were announced on November 6, 1973 for wheat, oats and barley.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge.

General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39=100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 au catalogue).

Indice des prix de trente matières industrielles (1935-39=100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}}$$

The selection of materials for pricing relates to groups as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to present usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according

L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense de familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation de familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère

their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to selected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the services indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they measure, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Rising prices are associated with declining purchasing

power, more distinct or dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est

power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is $\$90.91 ((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B

liée à la baisse du pouvoir d'achat de la monnaie, et la baisse de prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice de prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cent ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice de prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera $\$90.91 ((100.0/110.0) \times \$100)$, ce que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel de salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant qu'

justed figure of \$90.91. Assuming the week A average of 0.00 as an index equal to 100, the week B index becomes 3.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 10% rise in money wages $((\$100.00-\$80.00/\$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98 $((146.23/142.0) \times 100)$. (The wage and the price index both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollars (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce wages to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real

la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00-\$80.00/\$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de

wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city,

la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés en rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes qui comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherches. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons de prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour des mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969 et avril 1972 de *Prix et indices des prix* (no 62-002 catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains de prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mou-

the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns among cities, the magnitude of these differences in the comparisons covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-city retail price differentials, aggregative indexes beyond the budget groupings are not shown.

The weighting factors used to combine items to group component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of food commodities can be of significance in explaining city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. The data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time

Farm Input Price Indexes replace one of the two component indexes of the previously published series, Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replace the Composite Index Exclusive of Living Component from the forward.

A detailed description of concepts, methods and data is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is

ments relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est

reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes*, 1961=100, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the *Globe and Mail* and the *Montreal Gazette*. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of price in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new subgroups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Investors index and Preferred Index, see *Prices and Price Indexes* for February 1973.

reprise dans *Prices and Price Indexes* de septembre 1971 (62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes*, 1961=100 (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour famille agricole des séries de 1935-39 par un équivalent à jour ou on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placier hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix d'actions ordinaires et des titres miniers sont les cours de fermeture à la Bourse du jeudi indiqués dans le *Globe and Mail* et dans le *Montreal Gazette*. Pour les actions privilégiées, les prix sont des moyennes pondérées mensuelles. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par de nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et papiers, huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe des banques et de l'ancien indice supplémentaire investissements prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de février 1973.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price changes on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. Comparison of these series with the implicit price deflator (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1967 this sample has been replaced with prices from the ISPI (2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage material supplied by the Labour Standards Branch, Department of Labour, and relates to minimum wages paid on construction contracts for construction in a variety of trades and occupations.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining components with the weights as shown will not provide a composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 construction trades in each of 14 cities in Canada. Combined average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (62-002). This index is found in Table 20 of *Prices and Price Indexes* (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Gross National Product Division, Statistics Canada.
Industry Selling Price Indexes 1956-1968 Cat.
62-528.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices-and-Price-Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1967, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. (2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

- (1) Division du produit national brut, Statistique Canada.
- (2) *Indices des prix de vente dans l'industrie, 1956-1968*, no 62-528 au catalogue.

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyennant des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux de métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 & 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance. The indexes are designed to measure price changes for a programme of highway construction, in each of the provinces. Because price levels in the time base-period (1) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are rising in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction indexes but rather for units of construction work put in place, such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as pipe, usually supplied to the contractor by the government departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by determining characteristics of the contracts and the bid items, such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are paid by government departments to suppliers.

Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and operating electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction methodology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of prices of completed structures. Completed structure prices would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. Each of the indexes introduced in this publication have their own short-comings. Nonetheless, they may be helpful for various purposes provided the users understand the deficiencies. The reader is asked to make particular note of Section 62-526 Occasional Paper Catalogue - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component indexes and their weights included in the aggregate index presented herein are inappropriate for a particular project, the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par le ministère aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se reporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de

utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans certains cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses de main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de ce enquête.

Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which is described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.

Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.

Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.

Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Indexes of Machinery and Equipment

In response to the need of users wishing either to reflect expenditure data of machinery and equipment for change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment changes made by establishments belonging to industries as classified by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in the indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices and Cost collections from manufacturers most of whom reside in the United States.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

(a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.

(b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.

(c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de baraquements temporaires.

(d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

NOTES ON PRICES AND PRICE INDEX NUMBERS

NOTES SUR LES PRIX ET SUR LES NOMBRE-INDICES DES PRIX

Industry Selling Price Index: Manufacturing
(1961=100)

The industry selling price index (Total Manufacturing) moved 1.3% higher in March to 161.3 from the February index of 159.3. It was 18.1% higher than the March 1973 index of 136.6.

In terms of the relative contribution to the overall change in the total manufacturing index the more notable changes were increases recorded in the primary metals group (3.2%), particularly in the smelting and refining industry (3.5%), and iron and steel mills (3.0%). Increases also recorded in the wood products group (4.3%) reflecting higher prices registered in the sawmills and planing mills (6.5%). Increases recorded in the pulp and paper mills (1.3%) were mainly responsible for advances in the paper and allied products group (1.7%). Slaughtering and meat packing prices declined by 5.0%. Other decreases were relatively insignificant.

Indice des prix de vente dans l'industrie: Fabrication
(1961=100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières a augmenté de 1.3% passant de 159.3 en février à 161.3 en mars. L'augmentation est de 18.1% par rapport à l'indice de mars 1973 (136.6).

Si l'on compare les facteurs de variation de l'indice total, il faut retenir en premier lieu l'augmentation enregistrée dans le groupe de première transformation des métaux (3.2%) tout particulièrement dans l'industrie de la fonte et l'affinage (3.5%) et dans l'industrie du fer et de l'acier. On a aussi enregistré des augmentations dans le groupe des produits du bois (4.3%) en raison de la hausse des prix dans les scieries et les usines de rabotage (6.5%). La hausse des prix enregistrée dans les industries des pâtes et papiers (1.3%) est grandement responsable des hausses observées dans le groupe du papier et produits connexes (1.7%). Le prix des produits d'abattage de la viande a diminué de 5.0%. Les autres baisses ont été de peu d'importance.

Figures not available. - Les chiffres ne sont pas disponibles.

General Wholesale Index (1935-39=100)

The general wholesale index rose 1.5% to 442.5 from the revised February index of 435.8. It was 25.7% higher than a year earlier. One of the eight major group indexes was lower, while the remaining seven increased.

The animal products group index decreased 2.6% to 474.5 from the revised February index of 487.2. This reflected price declines for livestock, (-4.4%) fresh meats (-6.7%) and cured meats (-5.4%). An increase of 4.5% to 415.1 from the revised February index of 397.4 for the iron products group index reflected price increases for rolling mill products. The non-ferrous metals group index rose 3.6% to 415.3 from the revised February index of 400.9 on higher prices for petroleum and its products. An advance of 2.9% to 549.1 from the revised February index of 533.6 in the wood products group reflected price movements for spruce, newsprint, fir and woodpulp. Advances of a lesser degree were recorded in four major group indexes, chemical products 1.7% to 297.3 from 292.2, vegetable products 1.5% to 465.7 from 458.8, textile products 1.3% to 421.1 from 415.7 and non-metallic minerals 0.7% to 293.8 from 291.7.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a augmenté de 1.5% pour atteindre 442.5 par rapport à l'indice rectifié de février (435.8). Ceci représente une augmentation de 25.7% par rapport à il y a un an. L'indice d'un des huit groupes principaux a diminué alors que les sept autres ont progressé.

L'indice du groupe des produits d'origine animale a diminué de 2.6% pour atteindre 474.5, alors que l'indice rectifié de février était de 487.2. Cette diminution est attribuable aux baisses des prix du bétail (-4.4%) des viandes fraîches (-6.7%) et des viandes saumurées (-5.4%). Par suite de la hausse des prix des produits de laminage, l'indice du groupe des produits de fer a progressé de 4.5% pour atteindre 415.1, alors que l'indice rectifié de février était de 397.4. L'indice du groupe des métaux non ferreux a augmenté de 3.6% pour s'établir à 415.3 par rapport à l'indice rectifié de février qui s'établissait à 400.9 par suite de la hausse du prix du pétrole et de ses produits. La hausse de 2.9% de l'indice du groupe des produits de bois qui a atteint 549.1 (l'indice rectifié de février était de 533.6), est attribuable aux mouvements des prix de l'épinette, du papier journal, du sapin et de la pulpe de bois. Des avances de moindre importance ont été observées dans les indices de quatre groupes principaux; l'indice des produits chimiques a augmenté de 1.7%, passant de 292.2 à 297.3; celui des produits d'origine végétale, de 1.5%, passant de 458.8 à 465.7; celui des produits textiles, de 1.3%, passant de 415.7 à 421.1 et celui des minéraux non métalliques, de 0.7%, passant de 291.7 à 293.8.

*These indexes are preliminary. - Ces indices sont provisoires.

Security Price Indexes (1961=100)

The Investors' Index of common stock prices rose 3.3%, from 184.4 in February to 190.6 in March. Amongst the major groups, industrials rose 3.3% to 204.4, utilities increased 4.2% to 143.2 and finance gained 2.6% to 190.7. Within the thirteen industrial sub-groups, there was a noticeable increase of 9.4% in metal fabricating stock prices. As for utilities, pipe-line securities decreased 0.5% (141.0), while there was an increase in the other sub-groups. The increase in the finance index is mainly due to a 2.3% rise in bank securities to 227.7, and to a 3.7% increase in investments and insurance (132.1).

In the same period, the index of mining stock prices rose 1.9% to 173.1; golds increased 2.5% to 284.0 and base metals rose 1.0% to 113.8.

Of the two supplementary price indexes, uranium increased 5.7% to 304.6 and primary oil and gas fell 0.3% to 4.

The preferred stock index advanced 1.8% to 71.7.

Canadian Farm Products Index (1935-39=100)

The price index of Canadian farm products at terminal markets advanced 0.7% to 408.8 in March, from the February index of 406.1. The field products index moved 0.5% higher to 308.9 from 299.7 on price increases for potatoes and hay on both markets, for wheat and tobacco in the East, and for rye in the West. Lower prices were shown for corn and rye in the East, and for flax in the West.

The animal products index declined 0.8% to 508.6 in March, reflecting lower prices for hogs and raw wool on both Eastern and Western markets. Higher prices for steers on both markets included a subsidy on the top grades introduced by the federal government.

Higher prices were also shown for lambs on both Eastern and Western markets, for eggs in the East, and for calves in the West.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 1.6% to 476.9 in March from the revised February index of 469.4. Prices were higher for eight commodities, lower for eight and unchanged for fourteen. Principal changes included increases in steel scrap, tin, cottonseed oil, spruce lumber, copper, raw sugar, raw sugar and wheat while decreases were recorded for hogs, beef hides, raw wool, linseed oil, raw rubber and

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours des actions ordinaires a augmenté de 3.3% passant de 184.4 en février à 190.6 en mars. Parmi les trois grands groupes, les valeurs industrielles ont progressé de 3.3% pour se fixer à 204.4, les services publics ont augmenté de 4.2% pour s'établir à 143.2, et les finances ont gagné 2.6% pour atteindre 190.7. Parmi les treize sous-groupes industriels une hausse de 9.4% est à signaler dans le prix des actions de la fabrication des métaux. Dans le cas des services d'utilité publique les valeurs des pipelines ont diminué de 0.5% (141.0) alors que les autres sous-groupes étaient à la hausse. L'augmentation de l'indice des finances est attribuable à un gain des valeurs bancaires de l'ordre de 2.3% pour s'établir à 227.7 et à une augmentation du prix des actions des placements et des prêts de 3.7% (132.1).

Au cours de la même période, l'indice du cours des titres miniers a augmenté de 1.9% pour se fixer à 173.1; les aurifères, s'ont gagnés 2.5% pour se stabiliser à 284.0 et les métaux communs ont augmenté de 1.0% pour atteindre 113.8.

Pour ce qui est des deux indices supplémentaires, l'uranium a diminué de 5.7% pour s'établir à 304.6, et le pétrole et le gaz primaires ont fléchi de 0.3% pour s'inscrire à 4.

L'indice des actions privilégiées a augmenté de 1.8% à 71.7.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 0.7%, passant de 406.1 en février à 408.8 en mars. L'indice des produits de grande culture a augmenté de 3.1% pour s'établir à 308.9 (299.7 en février) en raison de la hausse du prix des pommes de terre et du foin sur les deux marchés, du blé et du tabac dans l'Est et du seigle dans l'Ouest. On a constaté une diminution de prix pour le maïs et le seigle dans l'Est et pour le lin dans l'Ouest.

L'indice des produits d'origine animale a régressé de 0.8%, passant de 512.5 à 508.6, traduisant ainsi une baisse du prix des porcs et de la laine brute sur les marchés de l'Est et de l'Ouest. On a observé une augmentation du prix des bouvillons sur les deux marchés, ce qui comprenait une subvention du gouvernement fédéral dans le cas des catégories supérieures.

On a aussi constaté une hausse du prix des agneaux sur les deux marchés, des oeufs dans l'Est et des veaux dans l'Ouest.

Indice des prix de trente produits industriels (1935-39=100)

L'indice des prix de trente produits industriels, calculé sous forme de moyenne géométrique non pondérée, a avancé de 1.6%, passant de 469.4 (indice révisé de février) à 476.9 en mars. Le prix de huit produits a augmenté, celui de huit autres a diminué et il est demeuré stationnaire pour les quatorze autres produits. Les principaux changements comprennent une augmentation du prix de la ferraille (acier), de l'étain, de l'huile de coton, des sciages d'épinette, du cuivre, du coton brut, du sucre brut et du blé; des diminutions ont par contre été enregistrées pour les porcs, les peaux de boeuf, la laine brute, l'huile de lin, le caoutchouc brut et les bouvillons.

**Farm Input Price Index (1961=100)
First Quarter 1974**

The Farm Input Price Index for Canada increased 5.6% in the 1st quarter 1974 moving to 185.4 from its revised 4th quarter level of 175.5. The Eastern index moved up to 190.4 from its revised 4th quarter level of 180.9, an increase of 5.3%. The Western index rose to 179.6 from a revised 4th quarter figure of 169.2, an increase of 6.1%. The increase over 1st quarter 1973 was 19.5% for Canada, 22.0% for the East, and 16.6% for the West.

Sharply higher seed prices along with increased prices for feed, fertilizer, labour, machinery replacement and operation and supplies caused most of the upward movement in the index.

**Indices (1961=100) des prix des entrées dans l'agriculture
premier trimestre de 1974**

L'indice canadien des prix des entrées dans l'agriculture augmenté de 5.6% au cours de 1er trimestre de 1974 pour atteindre 185.4 contre un niveau rectifié de 175.5 au 4e trimestre. L'indice pour l'Est est passé de 180.9 (niveau rectifié du trimestre) à 190.4, ce qui représente une augmentation de 5.3%. L'indice pour l'Ouest a grimpé de 169.2 à 179.6, soit une augmentation de 6.1%. L'augmentation par rapport au 1er trimestre 1973 a été de 19.5% pour le Canada, de 22.0% dans l'Est et 16.6% dans l'Ouest.

L'essentiel du mouvement de hausse est dû à la forte augmentation des prix des semences et aux augmentations des prix des aliments pour animaux et des engrais, des coûts de la main-d'oeuvre et des frais de remplacement et d'utilisation des machines ainsi que des prix des accessoires.

Consumer Price Movements

The Consumer Price Index for Canada (1961 = 100) rose 1.0% to 160.8 in March from 159.2 in February. Though major components moved up, most of the impetus behind the latest month's advance was attributable to a 1.4% rise in the Food index (despite some decline in meat prices), to a 0.8% increase in the Housing element and to a 1.8% advance in the Clothing index. The component for Recreation, Education and Reading rose 0.5% while that for Tobacco and Alcohol increased 0.4%. Both the Transportation and the Health and Personal Care elements moved up 0.3%. In the latest month the price level of All-Items other than Food was higher. Between March 1973 and March 1974, the Consumer Price Index advanced 10.4%.

The Food index increase of 1.4% to 180.5 in March from 177.9 in February was largely attributable to a 1.5% increase in the retail price level of food for home consumption. Food eaten away from home rose 1.2%. Except for beef and pork quotations, which moved downwards, higher prices were registered in the latest month for all important groups of home-consumed foodstuffs. Sugar and related items, together with fresh vegetables, provided the major impetus for the index rise. Sugar prices climbed a further 30% between February and March, thereby more than doubling in the last month. Fresh vegetable prices, on average, advanced more than 8% in the latest month with potatoes, lettuce and green beans accounting for most of the rise. Led by a 4% increase in bread prices between February and March, the cereal and bakery products index rose 2.9%; dairy products, on average, registered a 1.4% rise. Margarine prices, moving up for the fourth successive month, advanced over 7% in the March to reach a level nearly 42% above twelve months earlier. Soft drinks and other beverages, frozen and convenience foods, as well as processed fruit and vegetables also registered higher prices in the latest month. In contrast, the price of beef prices in early March was 1.6% lower than one month earlier, though it was 22% above that of March 1973. Similarly, pork prices moved downwards by 2.6% in the latest month with this sixth consecutive monthly decline bringing the index to an average less than 7% above a year earlier. Between March 1973 and March 1974, the total Food index and its components for home-consumed food each rose 18.1%. Food away from home advanced 18.1% over the same twelve-month period.

The Housing index rose 0.8% to 160.7 in March from 159.4 in February as a result of increases of 0.6% and 1.2% in shelter and the household operation components, respectively. Within shelter, the home-ownership element advanced 0.8% mainly because of increases in the indexes for mortgage interest, new houses and homeowner repairs: rents rose 0.2%. All major groups within household operation registered increases. Furniture and appliance prices rose, on average, 2.3% and 2.7%, respectively, reflecting increases in prices. Domestic gas rates rose in Vancouver and other cities and utility rates went up in some smaller Ontario centres. Similar increases were recorded for linen and draperies and coverings reflecting, in part, higher raw material prices. Quotations for tableware also rose. Household supply prices advanced 1.7% as all items surveyed registered increases. Appliance repair charges rose in most centres, causing the index for household services to advance 0.7%. In the

Mouvements des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961 = 100) a progressé de 1.0%, passant de 159.2 en février à 160.8 en mars. Bien que tous les principaux éléments aient augmenté, la poussée du mois dernier est principalement attribuable à une hausse de 1.4% de l'indice des aliments (en dépit d'une baisse légère du prix de la viande), de 0.8% de l'élément logement et de 1.8% de l'élément habillement. L'élément loisirs, formation et lecture a progressé de 0.5% et celui des tabacs et alcools, de 0.4%. L'élément transports, ainsi que l'élément soins personnels et hygiène ont progressé de 0.3%. En mars, le niveau des prix de l'indice d'ensemble, sans les aliments, a augmenté de 0.8%. De mars 1973 à mars 1974, l'indice d'ensemble a progressé de 10.4%.

L'indice des aliments a progressé de 1.4%, passant de 177.9 en février à 180.5 en mars, en raison principalement d'une hausse de 1.5% du niveau des prix de détail des aliments consommés à la maison; l'élément repas pris à l'extérieur a progressé de 1.2%. Sauf dans le cas du boeuf et du porc, dont les prix ont diminué, le prix de tous les groupes importants d'aliments consommés à la maison ont augmenté. Le sucre et ses dérivés, ainsi que les légumes frais sont les principaux responsables de cette hausse. Le prix du sucre a augmenté de 30% en mars, ce qui signifie qu'il a presque doublé au cours des trois derniers mois. Les prix des légumes frais ont avancé de plus de 8%, les pommes de terre, la laitue et le chou contribuant le plus à la hausse. Les céréales et produits de boulangerie ont monté de 2.9%, en raison surtout d'une hausse de 4% du prix du pain. Les produits laitiers ont enregistré une hausse de 1.4%. Le prix de la margarine, à la hausse pour le septième mois consécutif, a augmenté de plus de 7% en mars, ce qui donne une augmentation de près de 42% par rapport à il y a un an. Il y a eu aussi hausse de prix dans le cas des boissons gazeuses et autres boissons, des aliments congelés et des plats cuisinés, ainsi que des fruits et des légumes traités. En revanche, le niveau des prix du boeuf au début de mars était inférieur de 1.6% à celui du mois précédent, même s'il était de 22% supérieur à celui de mars 1973. Les prix du porc, à la baisse depuis six mois consécutifs, ont diminué de 2.6% en mars, atteignant une moyenne supérieure de moins de 7% à celle d'il y a un an. Entre mars 1973 et mars 1974, l'indice des aliments et son élément aliments consommés à la maison ont augmenté chacun de 18.6%; les repas pris à l'extérieur ont monté de 18.1%.

L'indice de l'habitation a progressé de 0.8%, passant de 159.4 en février à 160.7 en mars, en raison d'une hausse de 0.6% du logement et de 1.2% des dépenses de ménage. L'élément propriété a progressé de 0.8% à la suite surtout de hausses de l'intérêt hypothécaire, du prix des maisons neuves et des frais de réparations à la charge du propriétaire. Les loyers ont augmenté de 0.2%. Tous les principaux groupes dans les dépenses de ménage ont enregistré des hausses. Les prix des meubles et des appareils ménagers ont augmenté en moyenne de 2.3% et 2.7% respectivement, à la suite de hausses dans la plupart des centres. Les tarifs du gaz domestique ont augmenté à Vancouver et ceux de l'électricité ont progressé dans quelques petits centres de l'Ontario. On a enregistré des hausses généralisées pour le linge de maison et les rideaux de même que pour les revêtements de sol en partie à la suite d'une augmentation du prix des matières premières; les prix des articles de table ont aussi augmenté. Les fournitures de ménage ont avancé de 1.7% à la suite d'une hausse du prix de tous

twelve months to March 1974, the Housing index rose 7.5%.

The Clothing index advanced 1.8% to 148.1 in March from 145.5 in February. Widespread advances for a large number of items resulted in this latest increase which again reflected, in part, higher prices for materials used in clothing such as synthetic fabrics, cotton and wool. The men's and women's wear components, in advancing 1.9% and 1.3%, respectively, were significant contributors to the rise in the overall clothing index as was the clothing services component which rose 4.4% following general increases for laundry, dry cleaning and shoe repairs. Prices for children's clothing increased 2.5%, on average, and footwear quotations advanced 0.9%. In the latest twelve months, the Clothing index rose 10.1%.

The Transportation index rose 0.3% to 144.2 in March from 143.8 in February as increases were recorded in both the private and the public transportation components. Higher new car prices were the main cause of the increase in the private transportation element with advances being generally confined to models imported from Japan. Gasoline prices fell marginally in a few cities as reductions were recorded in some outlets, but motor oil quotations rose in a number of centres. The public transportation component advanced mainly in response to higher plane fares on domestic flights and increased local transit fares in some centres. In the twelve-month period ending March 1974, the Transportation index rose 7.7%.

The Health and Personal Care index rose 0.3% to 163.5 in March from 163.0 in February as increases of 0.3% and 0.2% were recorded in the personal care and the health care components, respectively. Within personal care, toiletry prices rose, on average, 0.7% and within health care, pharmaceutical quotations rose 0.4% as increases were recorded for prescribed and some non-prescribed medicines. In the latest twelve months, the Health and Personal Care index advanced 7.0%.

The Recreation, Education and Reading index rose 0.5% to 150.6 in March from 149.8 in February mainly in response to widespread increases in television repair charges. Phonograph records also rose in price in many centres and newspaper subscription rates went up in some smaller Ontario cities. In the twelve months to March 1974, the Recreation, Education and Reading index advanced 5.7%.

The Tobacco and Alcohol index rose 0.4% to 139.3 in March from 138.8 in February mainly in response to increases in the price of beer consumed in licensed premises in Quebec City, Montreal and Ottawa, and to generally higher cigar prices. In the latest twelve months, the Tobacco and Alcohol index rose 2.6%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between February and March, the total goods index advanced 1.1% with the main impetus coming from non-durable goods which rose 1.1% mainly in response to higher prices for food and domestic supplies. The index for semi-durable goods rose 1.5% largely because of higher clothing

les articles observés. Les frais de réparation des appareils ménagers ont augmenté dans la plupart des centres, ce qui a progresser de 0.7% l'élément services aux ménages. Au cours douze derniers mois écoulés, l'indice de l'habitation a progressé 7.5%.

L'indice de l'habillement a progressé de 1.8%, passant 145.5 en février à 148.1 en mars. Les prix d'un bon nombre d'articles qui ont augmenté un peu partout sont à la base de la dernière hausse qui découle encore une fois en partie de la hausse des prix des tissus synthétiques, du coton et de la laine. Les éléments vêtements pour hommes et pour femmes qui ont progressé de 1.9% et de 1.3% respectivement, ont largement contribué à cette hausse. Les services vestimentaires ont augmenté de 4.4% à la suite de la hausse générale des frais de blanchissage, nettoyage à sec et de réparation des chaussures. Le prix des vêtements pour enfants a augmenté de 2.5% et celui des chaussures, de 0.9%. Au cours des douze derniers mois, l'indice de l'habillement a augmenté de 10.1%.

L'indice des transports a augmenté de 0.3%, passant 143.8 en février à 144.2 en mars, en raison des augmentations des éléments transports publics et privés. La hausse du prix des automobiles neuves est la cause principale de l'augmentation du transport privé; ce sont surtout les voitures importées du Japon qui ont enregistré ces hausses. Le prix de l'essence a légèrement diminué dans quelques villes en raison des diminutions enregistrées dans quelques points de vente mais le prix de l'huile à moteur a augmenté dans certains centres. L'indice des transports publics a augmenté à la suite d'une hausse du tarif des vols intérieurs et des tarifs du transport local dans certains centres. Au cours de la période de douze mois se terminant en mars 1974, l'indice des transports a augmenté de 7.7%.

L'indice des soins personnels et hygiène a augmenté de 0.3%, passant de 163.0 en février à 163.5 en mars à la suite d'une hausse de 0.3% de l'élément soins personnels et de 0.2% de l'élément hygiène. Le prix des articles de toilette a augmenté de 0.7% et celui des produits pharmaceutiques, de 0.4% en raison des augmentations du prix des médicaments prescrits et de certains médicaments non prescrits. Au cours des douze derniers mois, l'indice a progressé de 7.0%.

L'indice des loisirs, de la formation et de la lecture a accru de 0.5%, passant de 149.8 en février à 150.6 en mars, en raison surtout de la hausse généralisée des frais de réparation des téléviseurs. Le prix des disques a aussi augmenté dans de nombreux centres et les frais d'abonnement aux journaux ont monté dans certaines petites villes de l'Ontario. Au cours des douze mois se terminant en mars 1974, l'indice a progressé de 5.7%.

L'indice des tabacs et alcools a progressé de 0.4%, passant de 138.8 en février à 139.3 en mars, en raison surtout de la hausse du prix de la bière consommée dans les endroits autorisés à Québec, de Montréal et d'Ottawa et de la hausse générale du prix des cigares. Au cours des douze derniers mois, l'indice a augmenté de 2.6%.

Si l'on classe les articles qui entrent dans l'indice des biens et services, on obtient une vue différente du mouvement des prix à la consommation. En mars, l'indice total des biens a augmenté de 1.1%; les biens non-durables ont augmenté de 1.1% par suite surtout de la hausse du prix des aliments et des fournitures domestiques sont les principaux responsables de cette hausse. L'indice des biens semi-durables

, and the component for durable goods increased 1.0%
y in response to higher quotations for appliances,
ure and furnishings. A rise of 0.6% was recorded for the
es index following increases in, amongst others, the
r, health, personal care and clothing elements. In the
e months to March 1974, the total goods index ad-
d 12.5% and that for services 6.8%.

augmenté de 1.5% en raison principalement de la hausse du prix
des vêtements. L'élément des biens durables a augmenté de 1.0%
à la suite surtout de la hausse des prix des appareils ménagers, des
meubles et des fournitures de maison. On a observé une hausse de
0.6% de l'indice des services à la suite d'augmentations des
éléments logement, santé et hygiène, habillement, et d'autres. Au
cours des douze mois se terminant en mars 1974, l'indice total des
biens a augmenté de 12.5% et celui des services, de 6.8%.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES

TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100													Annual
Industries and selected commodities(1)	Month - Mois												Annual
Industrie et certains produits(1)	J	F	M	A	M	J	J	A	S	O	N	D	Annual
	1971												
	1972												
	1973												
	1974												
(6) Industry selling price index: manufacturing - Indice des prix de vente dans l'industrie: industries manufactu- rières.	1970	119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.9	118.9	118.8	119.1
	1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	121.6
	1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	127.4
	1973	133.1	134.6	136.6	138.0	139.4	141.0	142.8	147.8	147.7	148.8	150.2	142.7
	1974	156.8	159.3	161.3									

- (1) Indexes for 1972, 1973 and 1974 are subject to revision. - Les indices pour 1972, 1973 et 1974 sont sujets à révision.
- (2) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.
- (3) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (4) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés p total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (5) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (6) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

(1) All indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision

(2) Includes gold. - Y compris l'or

(3) Consists of iron products and non-ferrous metals groups above but excluding gold. - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or.

(4) These two series comprise the General Wholesale Index. - Ces deux séries comprennent l'indice général de gros.

(5) Excludes gold. Sauf l'or.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - March 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Mars 1974 207.8

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

Non-durable goods(4) - Biens non durables(4)	167.2	165.4	145.7	144.8	152.7	136.9	129.3
Non-durables excluding food - Biens non durables sans les aliments	144.4	143.7	133.2	133.1	136.3	129.5	125.9
Alcoholic beverages - Boissons alcooliques	134.4	133.7	128.6	128.6	129.5	126.3	122.5
Tobacco products - Produits du tabac	146.8	146.4	146.3	146.3	146.2	140.7	137.7
Domestic supplies - Fournitures de ménage	134.1	131.8	124.4	124.0	126.7	120.9	118.4
Health and personal care supplies - Pro- duits pour l'hygiène et les soins personnels	119.4	118.6	115.8	115.8	116.5	114.0	112.1
Other non-durables - Autres biens non durables	159.3	158.9	138.3	138.3	144.8	133.9	129.3
Services	175.5	174.4	164.4	163.7	167.6	157.9	150.1
Shelter services - Habitation	176.2	175.3	165.7	165.1	169.0	157.9	149.7
Household utilities - Services publics aux ménages	137.6	136.9	129.3	128.8	130.8	122.3	119.6
Domestic services - Services aux ménages	219.7	216.4	193.9	193.9	196.6	183.8	170.8
Health, personal care, and clothing services - Hygiène, soins personnels et services vestimentaires	186.6	183.9	167.9	166.8	173.3	161.9	152.7
Recreation, education, and communication services - Loisirs, formation et communications	155.4	154.5	149.6	149.0	151.2	144.7	137.9
Transportation services - Transports	186.7	186.5	176.7	175.3	179.2	174.8	168.1

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLÉAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

June - Juin										

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(3) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for 1974 are subject to revision. Les indices pour 1974 sont sujets à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

(1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à révision.

(2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.

(3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).

(4) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.

(5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.

(6) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contract profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

(1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.

(4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

(1) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service bulletin, 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des prix dans la construction, no 62-006 au catalogue.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières, par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) For further detailed explanation see occasional paper 62-526. - Pour plus de renseignements, voir le bulletin hors série No 62-526 au catalogue.

(4) For further detailed explanation see occasional paper 62-533. - Pour plus de renseignements, voir le bulletin hors série No 62-533 au catalogue.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix et d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", les bulletins sur les enquêtes annuelles au cours desquelles sont recueillies des statistiques sur les expéditions de produits, l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise sont pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, sont pondérés à la pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été exclus de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois inclus dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to mill.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 - July 1973 were announced on November 6, 1973 for wheat, oats and barley.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge.

Used in original indexes from Aug. 1972 to July 1973. - Utilisé dans les premiers indices d'août 1972 jusqu'en juillet 1973.

Incorporated retroactively in revised final indexes Aug. 1972 to July 1973. - Inclus rétroactivement dans les indices finals révisés d'août 1972 à juillet 1973.

Used in current indexes. - Utilisé dans les indices courants.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1}{tN} \times \frac{P^2}{tN} \times \frac{P^3}{tN} \times \dots \times \frac{P^{30}}{tN}}$$

$$\sqrt[30]{\frac{P^1}{t \ 35-39} \times \frac{P^2}{t \ 35-39} \times \frac{P^3}{t \ 35-39} \times \dots \times \frac{P^{30}}{t \ 35-39}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des classes par produit. Cet indice est "général" du fait qu'il prend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprend surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de définir exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, l'indice ne constitue pas une mesure du pouvoir d'achat du consommateur parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité première réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de ces trente marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1}{tN} \times \frac{P^2}{tN} \times \frac{P^3}{tN} \times \dots \times \frac{P^{30}}{tN}}$$

$$\sqrt[30]{\frac{P^1}{t \ 35-39} \times \frac{P^2}{t \ 35-39} \times \frac{P^3}{t \ 35-39} \times \dots \times \frac{P^{30}}{t \ 35-39}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights and relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité et de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 No. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévue. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix à la consommation au détail et coût de la vie" - Bulletin de service, numéro 62-005, catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leur système de pondération particuliers, et de ce qu'ils font appel à moins de quotations, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations urbaines ont sous-estimé le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu le taux de croissance des prix, principalement sur des périodes longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois par leur contenu et par leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que les indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir d'une période de base et des périodes subséquentes.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

A mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., in n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10%

not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is $\$90.91 ((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 25% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98 $((146.23/142.0) \times 100)$. (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which

des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 au montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera \$90.91 $((100.0/110.0) \times 100)$, que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourra appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus de biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains ajustés

has a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prix et indices des prix* (no 62-002 au catalogue).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group and component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains de prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice de prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale en les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-dessus des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tables relatives à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre en ce qui concerne les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base de 1961 = 100.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto and Montreal stock exchanges.

The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the investor's mining and supplementary stock indexes are Thursday's closing quotations from the exchange (Montreal, Toronto, Vancouver or Calgary) with the highest volume for particular stock, as reported in the Daily Canadian Data Bank of the Financial Post Computer Services Department. For preferred stocks, prices are monthly weighted averages of the daily closing price in which weights are daily total volume. The price reference base for the indexes is the year 1956, and the indexes express prices as a percentage of price 1956, arithmetically converted to the 1961 = 100 base.

Revised indexes on the base 1956 = 100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the indexes, apart from shift in the price reference base, was the classification of stocks according to the Standard Industrial Classification. In continuing major group Industrials, 4 sub-groups (Mill and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) were replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of former index, viz., Industrial Mines, Beverages, Textile Clothing, Pulp and Paper, and Oils (renamed Petro-

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (no 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961 = 100* (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières mesurent dans le temps l'incidence du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un actionnaire hypothétique (par opposition au spéculateur). Le portefeuille comprend des actions de sociétés canadiennes cotées à la Bourse de Toronto et de Montréal.

Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres miniers et les indices supplémentaires sont les cours de fermeture de jeudi (Montréal, Toronto, Vancouver et Calgary) affichant le volume le plus élevé pour une valeur en particulier, d'après la Banque des données canadiennes quotidiennes du Service de l'informatique du *Financial Post*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles des cours de clôture de chaque jour et les poids, le volume quotidien total. La période de référence pour les indices est l'année 1956 et les indices représentent les prix exprimés en pourcentage des prix de 1956 recalculé sur la base 1961 = 100.

Les indices révisés sur la base 1956 = 100 ont été publiés pour la première fois dans la livraison de juin 1962 de cette publication. La modification la plus importante à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et

leum) were continued. The major group utilities was continued but the Pipelines index was added as a sub-group and the previous Power and Traction sub-group was replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A major group Finance was composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights which were previously limited to major groups, were extended to sub-groups. Weights in the index continue to be based on shares outstanding.

A revision of the Security Price Indexes to the 1971 = 100 base is under development.

For the list of stocks currently included in the Investors Index and the Preferred Index, see list below.

**Residential and Non-Residential Building
Construction Price Indexes**

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators(1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

**Indices des prix de la construction résidentielle
et non résidentielle**

Les indices à pondération fixe des prix des entrées matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices-and-Price-Indexes* mai 1970. On peut s'en procurer un exemplaire ainsi que données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement(1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et des marges bénéficiaires.

(1) Division du produit national brut, Statistique Canada.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system (2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining the components with the weights as shown will not provide a composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some local unions. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of overtime time compensation for one hour in the city specified. These rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the effect of rate change on basic union wages for the major construction trades employed in a given city. Because union members in cities tend to be engaged mainly in non-residential commercial building construction and because rates for work associated with engineering work were excluded from the price sample the indexes best approximate wage rate index for non-residential construction.

Industry Selling Price Indexes 1956-1968 Cat. 62-528.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.(2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Etant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

(2) *Indices des prix de vente dans l'industrie, 1956-1968*, no 62-528 au catalogue.

Highway Construction Price Indexes (1961=100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956=100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961=100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Indices des prix de la construction routière (1961=100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière pourcentages des sommes payées en 1961. La conversion des indices à la base 1961=100 ne modifie pas leur évolution pourcentages comparativement aux indices publiés précédemment et dont la base était 1956=100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des groupes et des pondérations publiées donne l'indice général publié (1961=100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'index général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961) les niveaux de prix ont varié d'une province à l'autre; aussi, on peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge ou l'épandage à chaud d'une tonne de béton bitumineux. Outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission des unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période du 1er avril 1968 au 31 mars 1969.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. The indexes introduced in this publication have specific short-comings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section I, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be indexed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials and equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and users directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union electric wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban contract and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62 = 526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façons à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Le terme "construction" a été défini comme étant construction neuve ou la réparation des réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou postes de manoeuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, compteurs, les transformateurs de distribution et les dépenses de main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manoeuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage sont exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres. Toutefois, la majeure partie des données de coût ont été tirées de déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de l'enquête.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels des techniciens et du personnel administratif. Pour le cas de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêt pendant la construction, frais généraux, fourniture et entretien de baraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices are then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

NOTES ON PRICES AND PRICE INDEX NUMBERS

NOTES SUR LES PRIX ET LES INDICES DE PRIX

Industry Selling Price Index Manufacturing (1961=100)

The industry selling price index (total manufacturing) moved 1.7% higher in April to 165.0 from the March index of 162.2. It was 19.4% higher than the April 1973 index of 138.2.

In terms of the relative contribution to the overall change in the total manufacturing index the more notable changes were increases recorded in the food & beverages group particularly in pasteurizing plants industry (5.3%), sugar refineries (6.1%) and soft drink mfrs (7.3%). Increases also occurred in the paper and allied products group (4.1%) reflecting higher prices registered in the pulp and paper mills (4.7%). Price increases recorded in iron foundries (4.5%) and aluminum rolling, casting and extruding (6.8%) were mainly responsible for advances in the primary metals group (2.0%). Decreases during the month were relatively insignificant.

Indice des prix de vente dans l'industrie (1961=100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières a augmenté de 1.7%, passant de 162.2 en mars à 165.0 en avril. Il s'est accru de 19.4% par rapport à son niveau d'avril 1973 (138.2).

En ce qui a trait à l'apport relatif des groupes à la variance globale de l'indice total de la fabrication, les progressions les plus importantes ont été celles du groupe des aliments et boissons, et plus particulièrement de l'industrie de pasteurisation (5.3%), des raffineries de sucre (6.1%) et des fabricants de boissons gazeuses (7.3%). On a aussi noté des hausses dans le groupe papier et activités connexes (4.1%) en raison de la hausse des prix des usines de pâtes et papiers (4.7%). Les augmentations de prix enregistrées dans les fonderies de fer (4.5%) et dans le laminage, le moulage et l'extrusion de l'aluminium (6.8%) sont les principaux responsables de la progression des prix dans le groupe de première transformation des métaux (2.0%). Les baisses observées au cours du mois ont été relativement peu importantes.

These indexes are preliminary. - Ces indices sont provisoires.

General Wholesale Price Index (1935-39=100)

The general wholesale price index rose 1.7% in April to 452.2 from the revised March index of 444.5. It was 27.0% higher than the April 1973 index of 356.0. All of the eight major group indexes were higher. There were slight increases in the vegetable and animal products group components.

The non-metallic minerals group index rose 4.5% in April to 311.4 from 298.1 on higher prices for petroleum & its products, whose index rose 10.2% between April and March. It was 58.6% higher than April 1973. An advance of 3.2% to 569.0 from 551.6 in the wood products group index reflected price increases for woodpulp, building board, cedar and newsprint. Higher prices for scrap iron and steel, tinplate & galvanized sheets and rolling mill products were chiefly responsible for an increase of 2.2% to 430.4 from 421.0 in the iron products group index. The textile products group index moved 2.0% higher to 429.5 from 421.1 on price increases for cotton fabrics, woollen hosiery & knit goods, misc. fibre products and cotton knit goods. Increases to lesser degrees were recorded for non-ferrous metals, 1.8%, chemical products, 1.7%, animal products, 0.9%, and vegetable products, 0.3%.

L'indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 1.7% passant de 444.5 en mars (indice révisé) à 452.2 en avril, ce qui représente aussi une hausse de 27.0% par rapport à l'indice d'avril 1973 (356.0). Les indices des huit principaux groupes ont tous augmenté. On a aussi noté des petites hausses des éléments du groupe des produits d'origine végétale et d'origine animale.

L'indice des minéraux non métalliques a augmenté de 4.5% passant de 298.1 en mars à 311.4 en avril, par suite de la hausse des prix du pétrole et des produits dérivés dont l'indice a augmenté de 10.2% entre les mois de mars et avril, ce qui représente une hausse de 58.6% par rapport à avril 1973. La progression de 3.2% des produits du bois dont l'indice est passé de 551.6 à 569.0 a été provoquée par la hausse des prix de la pâte à bois, des planches de construction, du cèdre et du papier journal. L'augmentation des prix des riblons de fer et d'acier, de l'étain, des feuilles galvanisées et des produits de laminage est responsable en grande partie de l'avance de 2.2% de l'indice du groupe des produits du fer qui est passé de 421.0 à 430.4. L'indice du groupe des produits textiles a progressé de 2.0% passant de 421.1 à 429.5 à cause de l'augmentation des prix des tissus en coton, de la bonneterie en laine, des produits fibreux divers et des tricotages en coton. Des augmentations moins importantes ont été enregistrées pour les métaux non ferreux (1.8%), les produits chimiques (1.7%), les produits d'origine animale (0.9%) et les produits d'origine végétale (0.3%).

*These indexes are preliminary. - Ces indices sont provisoires.

Security Price Indexes (1961=100)

The investors index of common stock prices decreased 5.7% in April to 178.2 from 189.1 in April 1973, which means year-to-year decrease of 5.7%. Of the three major groups, industrials decreased 6.3% to 191.4, utilities 6.6% to 133.7 and finance 7.2% to 177.0. All of the thirteen industrial sub-groups decreased, with the highest losses occurring in industrial mines and beverages. In utilities, electric power and telephone decreased 3.9% and 3.3% respectively to 101.8 and 87.3; the three other sub-groups decreased more than 8.0%. The decrease in the finance index resulted from a 5.9% decrease in banks to 214.3 and an 11.5% decrease in investment and loan to 116.9.

In the same period, the index of mining stock prices increased 6.6% to 161.6; gold was down 5.9% to 267.3 and base metals were down 7.7% to 105.1.

Of the two supplementary indexes, uraniums fell 11.4% to 272.1 and primary oils and gas moved down 11.4% to 431.8.

The preferred stock index decreased 5.3% from 71.7 in March to 67.9 in April.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at term markets advanced 1.4% to 508.6 from the revised March index of 501.4. An advance of 2.2% to 542.0 from the revised March index of 530.3 in the animal products index reflected higher prices for butterfat, fluid milk, cheesemilk and steers on both Eastern and Western markets and for calves and lambs in the West. Lower prices were shown for raw wool and hogs on Eastern markets, for poultry in the East and calves, eggs and chickens in the West. The field products index rose 0.6% to 475.1 from the revised March index of 472.4 on higher prices for hay and potatoes on both Eastern and Western markets. Lower prices were recorded for rye on both markets, for oats and corn in the East and flax in the West. The field products index from July 1973 forward now contains estimates of final government Board payments for the 1973-1974 crop year.

Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 1.5% to 491.7 in April from the revised March index of 484.5. Prices were higher for eight commodities, lower for nine and

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours de placement des actions ordinaires a diminué de 5.7% en avril pour s'établir à 178.2; le même indice se situant à 189.1 à pareille date l'an passé, ce qui représente une diminution annuelle de 5.7%. Parmi les trois grands groupes les valeurs industrielles ont diminué de 6.3% pour se fixer à 191.4, les services publics accusent une baisse de 6.6% pour s'inscrire à 133.7 et les valeurs des finances ont perdu 7.2% pour s'établir à 177.0. Les treize sous-groupes industriels ont tous diminué, les pertes les plus évidentes se situant dans les actions des mines industrielles et des boissons. Dans le cas des services d'utilité publique, les actions de l'énergie électrique et du téléphone ont diminué de 3.9% et 3.3% respectivement pour s'inscrire à 101.8 et 87.3; les trois autres sous-groupes accusent une baisse de plus de 8.0%. La diminution de l'indice des finances est attribuable à une baisse des valeurs bancaires de 5.9% pour se fixer à 214.3, et à une perte de 11.5% des valeurs des placements et des prêts (116.9).

Au cours de la même période, l'indice du cours des titres miniers a diminué de 6.6% pour s'établir à 161.6; les aurifères ont perdu 5.9% (267.3), et les métaux communs ont baissé de 7.7% (105.1).

Pour ce qui est des deux indices supplémentaires, l'uranium a diminué de 11.4% (272.1); le pétrole et le gaz primaires ont enregistré une baisse de 11.4% pour s'inscrire à 431.8.

L'indice des actions privilégiées a diminué de 5.3% de mars (71.7) à avril (67.9).

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 1.4% pour atteindre 508.6, alors que l'indice révisé de mars était de 501.4. L'augmentation de 2.2% de l'indice des produits d'origine animale qui a atteint 542.0, alors que l'indice révisé de mars était de 530.3 est attribuable à une hausse des prix des matières grasses, du lait de consommation, du lait de fromagerie et des bouvillons, sur les marchés de l'Est et de l'Ouest, et des veaux et des agneaux dans l'Est. On a enregistré une baisse des prix de la laine brute et des porcs sur les deux marchés, de la volaille dans l'Est et des veaux, des oeufs et des agneaux dans l'Ouest. L'indice des produits de grande culture a atteint 475.1, ce qui représente une hausse de 0.6% par rapport à l'indice révisé de mars (472.4), les prix du foin et des pommes de terre ayant augmenté sur les marchés de l'Est et de l'Ouest. On signale une baisse du prix du seigle sur les deux marchés, de l'avoine et du maïs dans l'Est, et du lin dans l'Ouest. L'indice des produits de grande culture de juillet 1973 jusqu'à maintenant renferme des estimations des paiements finals de la Commission du blé pour la campagne agricole 1973-1974.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme une moyenne géométrique non pondérée, a progressé de 1.5% pour s'établir à 491.7 en avril, contre 484.5 en mars (indice révisé). Les prix de huit marchadises ont augmenté, ceux de neuf

unchanged for thirteen. Principal changes included increases for white lead, crude oil, domestic lead, bleached sulphite pulp, tin, domestic zinc, spruce lumber and raw sugar while decreases were recorded for linseed oil, raw rubber, raw wool, hogs, steers domestic wheat and cottonseed oil.

Consumer Price Movements

The Consumer Price Index for Canada (1961 = 100) rose 0.7% to 161.9 in April from 160.8 in March. Though all major components registered increases, the Food index edged up by only 0.1% while the price level of All-Items other than Food increased 0.9%. Main contributors to this latest month's advance were the Clothing and the Transportation elements which rose 0.9% and 1.2%, respectively, along with Housing which went up 0.4%. The indexes for Recreation, Education and Reading and for Health and Personal Care advanced 1.5% and 2.0%, respectively. The Tobacco and Alcohol component moved up by 1.6%. Between April 1973 and April 1974, the All-Items Index advanced 9.9%.

The Food index edged up 0.1%* to 180.8 in April from 180.5 in March. This latest increase was attributable to a 1.8% advance in the price of food consumed outside the home. The food at home index fell 0.2% as marked declines in beef and pork prices offset advances in most other major components. Increases in a number of centres for fresh milk, butter and bread led advances of 4.6% and 2.4%, respectively, in the dairy and the cereal and bakery products indexes. In April, the cereal and bakery products index stood over 26% above its level of twelve months earlier. Egg prices likewise registered an increase of over 26% in the past twelve months, having increased by 1.4% between March and April. Margarine prices continued their advance of recent months, moving up 11.6% in the latest month, to stand over 58% above their level of twelve months previous. Mixed movements were recorded for fresh produce in the latest month: fresh fruit prices rose 0.4%, on average, but fresh vegetable prices declined 1.6% as decreases for lettuce, cabbage, onions and other items more than offset a further 5% rise in the price of potatoes. Processed fruit and vegetables recorded advances of 2.0% and 2.9%, respectively, and were retailing over 18% above their levels of a year earlier. Soft drinks and other beverages as well as frozen and convenience foods, moved higher in price between March and April. In contrast, the level of beef prices in early April was 6.9% below that of a month earlier and pork prices fell 7.2%, on average, over the same period. Poultry quotations rose 1.5%, however. While poultry and beef prices, respectively, stood 22.5% and 11.0% higher than in April 1973, pork was retailing, on average, 2.8% below its level of a year previous and about 18% under its peak of September 1973. Though prices of sugar-related products, such as chocolate bars and jam, recorded increases in the latest month, the price of sugar itself fell 4.4% to register its first decrease since last October. Between April 1973 and April 1974, the Food index rose 15.7%, with the price of food consumed at home rising 15.2% and that for food away from home 18.6%

ont diminué et ceux de treize sont demeurés inchangés. Les principales variations comprennent une augmentation du prix de la céruse, du pétrole brut, du plomb produit au pays, de la pâte à sulfite blanchie, de l'étain, du zinc produit au pays, des sciages d'épinette et du sucre brut et une baisse du prix de l'huile de lin, du caoutchouc brut, de la laine brute, des porcs, des bouvillons, du blé du pays, et de l'huile de coïon.

Mouvements des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961 = 100) est passé de 160.8 en mars à 161.9 en avril, soit une progression de 0.7%. Bien que les principaux éléments aient enregistré des hausses, l'indice des aliments n'a augmenté que de 0.1% alors que le niveau des prix de l'ensemble des éléments sauf les aliments a augmenté de 0.9%. La progression du mois dernier est attribuable en grande partie aux secteurs de l'habillement et des transports qui ont progressé de 0.9% et 1.2% respectivement. L'indice de l'habitation a augmenté de 0.4%. Les indices de loisirs, de la formation et de la lecture et des soins personnels d'hygiène ont progressé de 1.5% et 2.0% respectivement. L'élément tabacs et alcools a connu une hausse de 1.6%. De avril 1973 à avril 1974, l'indice d'ensemble a progressé de 9.9%.

L'indice des aliments a augmenté de 0.1%*, passant de 180.5 en mars à 180.8 en avril. Cette dernière augmentation est imputable à une hausse de 1.8% du prix des repas pris à l'extérieur. L'indice des aliments consommés à la maison a régressé de 0.2% parce que les baisses sensibles des prix du boeuf et du porc ont eu plus de poids que les hausses de prix de la plupart des autres éléments principaux. Dans un certain nombre de centres, les hausses de prix du lait frais, du beurre et du pain ont fait monter de 4.6% et 2.4% respectivement les indices des produits laitiers, des céréales et des produits de boulangerie s'est maintenu à un niveau de plus de 26% au-dessus de ce qu'il était un an plus tôt. Les prix des oeufs ont été majorés de plus de 26% au cours des douze derniers mois, l'augmentation étant de 1.4% entre mars et avril. Les prix de la margarine ont continué leur progression. Les derniers mois, la hausse se situant le mois dernier à 11.6%, pour atteindre un niveau de plus de 58% au-dessus de ce qu'il était douze mois plus tôt. Diverses variations ont été enregistrées pour les fruits et légumes frais. Le prix des fruits frais a augmenté de 0.4%. Le prix des légumes frais a diminué de 1.6% parce que la baisse du prix de la laitue, du chou, des oignons et d'autres articles a eu plus de poids qu'une hausse de 5% du prix des pommes de terre. Les fruits et légumes traités ont enregistré des hausses respectives de 2.0% et 2.9%, et se vendaient dans les magasins de détail à des prix supérieurs de 18% à ceux de l'an dernier. Les boissons gazeuses et les autres boissons, de même que les aliments congelés et les plats cuisinés ont augmenté de prix de mars à avril. Par contre, les prix du boeuf au début d'avril étaient de 6.9% inférieurs à ceux du mois précédent et les prix du porc ont diminué de 7.2% au cours de la même période. Le prix de la volaille a augmenté de 1.5%. Alors que les prix de la volaille et du boeuf maintenaient respectivement à 22.5% et à 11.0% au-dessus de ce qu'ils étaient d'avril 1973, le prix de détail du porc a été de 2.8% inférieur à celui de l'année précédente et d'environ 18% au-dessous du prix maximum enregistré en septembre 1973. Bien que les produits à base de sucre comme les tablettes de chocolat et la confiture aient augmenté de prix le mois dernier, le sucre lui-même a enregistré sa première baisse de prix (4.4%) depuis octobre dernier. Entre avril 1973 et avril 1974, l'indice des aliments a progressé de 15.7%, le prix des aliments consommés à la maison augmentant de 15.2% et celui des repas pris à l'extérieur, de 18.6%.

The Housing index moved up by 0.4% to 161.4 in April from 160.7 in March as a result of increases in both the shelter and the household operation components. Within shelter, the home-ownership element rose 0.7% because of increases in the indexes for new houses, mortgage interest and repairs; rents moved up 0.2%. In the household operation component, electricity rates increased in Winnipeg and a number of small Ontario cities, while fuel oil prices edged down in Vancouver. Among home furnishing items, furniture, floor coverings, linens and utensils rose in price. Household supply items advanced 1.2% due mainly to price increases for toilet paper, food wrap and garbage bags. The housing index rose 7.5% from its April 1973 level.

The Clothing index advanced 0.9% to 149.5 in April from 148.1 in March. Increases were recorded in the great majority of items surveyed as the index continued to reflect, in part, higher prices for materials used in clothing. The men's and women's wear components, in rising 1.2% and 0.7%, respectively, were significant contributors to the increase in the overall Clothing index as was children's wear which advanced 1.8%. Footwear prices rose, on average, 0.7% and increases for wool, cotton and synthetic fabrics pushed the piece goods index to rise 1.4%. In the latest twelve months, the Clothing index went up 9.6%.

The Transportation index advanced 1.2% to 145.9 in April from 144.2 in March as increases were recorded in both the private and the public transportation components. Within the former, the automobile operation and maintenance element advanced 1.4% as most items surveyed, including tires, tires and batteries, recorded increases. Gasoline prices, however, declined 0.8% mainly due to the lowering of provincial gasoline taxes in Alberta. New car prices edged up 0.3%. The public transportation component advanced mainly in response to higher international air fares and to an increase in the train fares index. Taxi fares also went up in some centres including Halifax and Regina. In the latest twelve months, the Transportation index rose 9.0%.

The Health and Personal Care index moved up 2.0% to 166.8 in April from 163.5 in March as increases of 3.8% and 1.0% were recorded in the health care and personal care components, respectively. Within health care, dentists' fees increased in most cities while the index for pharmaceuticals edged up due to increases in both prescribed and non-prescribed drugs. Among items of personal care, toiletry prices rose, on average, 1.7% and men's haircut charges increased in Vancouver and Victoria. In the twelve months ending April 1974, the Health and Personal Care index increased 8.2%.

The Recreation, Education and Reading index advanced by 1.5% to 152.9 in April from 150.6 in March as a result of increases in the recreation and reading components. The recreation element rose 1.7% mainly in response to advances in hotel and motel rates in most major centres and to widespread increases in prices for boats and motors.

L'indice de l'habitation est monté de 0.4%, passant de 160.7 en mars à 161.4 en avril, en raison d'une augmentation du coût du logement et des dépenses de ménage. Dans le secteur du logement, les frais de propriété ont progressé de 0.7% par suite d'une hausse du prix des maisons neuves, du taux d'intérêt hypothécaire et des frais des réparations; les loyers ont augmenté de 0.2%. Dans le domaine des dépenses de ménage, les tarifs d'électricité ont augmenté à Winnipeg et dans certaines petites villes de l'Ontario, tandis qu'à Vancouver il y a eu baisse du prix du mazout. Quant aux articles d'ameublement de maison, il y a eu hausse du prix des meubles, des revêtements de sol, du linge de maison et des ustensiles. L'indice des fournitures de ménage a grimpé de 1.2% par suite surtout d'une hausse du prix du papier hygiénique, des emballages pour aliments et des sacs à ordures. L'indice de l'habitation s'est maintenu à 7.5% au-dessus du niveau d'avril 1973.

L'indice de l'habillement a progressé de 0.9% passant de 148.1 en mars à 149.5 en avril. On a enregistré des augmentations dans la plupart des articles observés alors que l'indice continuait de traduire en partie la hausse des prix des matières utilisées dans la fabrication des vêtements. Les prix des vêtements pour hommes et des vêtements pour femmes ont augmenté de 1.2% et de 0.7% respectivement et ont contribué sensiblement à l'augmentation de l'indice global de l'habillement tout comme l'élément vêtements pour enfants qui a progressé de 1.8%. Les prix des chaussures ont augmenté de 0.7% et la hausse des prix de la laine, du coton et des tissus synthétiques ont fait monter l'indice du tissu à la verge de 1.4%. Au cours des douze derniers mois, l'indice de l'habillement a augmenté de 9.6%.

L'indice des transports a progressé de 1.2%, passant de 144.2 en mars à 145.9 en avril, en raison des augmentations enregistrées par les transports privés et publics. Dans l'élément transport privé, l'élément utilisation et entretien de l'automobile a augmenté de 1.4% alors que la plupart des éléments observés y compris les réparations, les pneus et les batteries ont enregistré des augmentations. Le prix de l'essence, toutefois, a diminué de 0.8% surtout en raison de la réduction des taxes provinciales sur l'essence en Alberta. Le prix des automobiles neuves a augmenté de 0.3%. La hausse de février dans l'élément transports publics est en grande partie attribuable à la hausse des tarifs d'avions internationaux et à l'augmentation de l'indice des tarifs des trains. Les tarifs des taxis ont aussi monté dans certaines villes y compris Halifax et Regina. Au cours des douze derniers mois, l'indice des transports a augmenté de 9.0%.

L'indice des soins personnels et hygiène s'est accru de 2.0%, passant à 163.5 en mars à 166.8 en avril alors qu'on a enregistré des hausses respectives de 3.8% et de 1.0% dans les éléments hygiène et soins personnels. Dans l'élément hygiène, les honoraires de dentistes ont augmenté dans la plupart des villes alors que l'indice des produits pharmaceutiques a progressé à cause de la hausse de prix des médicaments prescrits. Parmi les articles de soins personnels, le prix des articles de toilette a augmenté de 1.7% et le prix de la coupe de cheveux pour hommes a augmenté à Vancouver et à Victoria. Au cours des douze mois se terminant en avril 1974, l'indice des soins personnels et de santé a augmenté de 8.2%.

L'indice des loisirs, de la formation et de la lecture a progressé de 1.5%, passant de 150.6 en mars à 152.9 en avril, en raison des hausses enregistrées par les éléments loisirs et lecture. L'élément récréation a augmenté de 1.7% à la suite de la hausse des prix des chambres d'hôtel et de motel dans la plupart des grands centres et de l'augmentation généralisée des prix des

A rise of 2.2% in the reading index followed higher newspaper subscription rates in some cities including St. John's, Halifax and Montreal. Between April 1973 and April 1974, the Recreation, Education and Reading index advanced 6.9%.

The Tobacco and Alcohol index advanced 1.6% to 141.5 in April from 139.3 in March in response to generally higher cigarette and tobacco prices. In the latest twelve months, the Tobacco and Alcohol index rose 4.2%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between March and April, the total goods index advanced 0.6% with the largest increase being recorded for semi-durable goods which rose 1.3% mainly in response to higher prices for clothing. The index for non-durable goods advanced 0.5% mainly in response to increased quotations for newspapers, cigarettes and tobacco: the component for durable goods advanced 0.6% largely because of higher furniture and automobile prices. A rise of 0.9% was recorded for the services index following increases in the shelter, transportation and health elements. In the twelve months to April 1974, the total goods index advanced 11.4% and that for services 7.1%.

*It should be noted that the Food index calculations, which are carried to 10 figures in the computer, are rounded to one decimal for publication. This rounding sometimes results in seeming anomalies such as has occurred this month. The total Food index is shown as rising by 0.1% between its March and April levels of 180.5 and 180.8, respectively — seemingly a movement of closer to 0.2%. However, the actual figures are as follows:

seemingly a movement of closer to 0.2%.

bateaux et des moteurs. La hausse de 2.2% de l'indice de la lecture est attribuable à la hausse du prix des abonnements aux journaux dans certaines villes, dont Saint-Jean (T.-N.), Halifax et Montréal. Entre avril 1973 et avril 1974, l'indice loisirs, de la formation et de la lecture a progressé de 6.9%.

L'indice des tabacs et alcools a progressé de 1.6% passant de 139.3 en mars à 141.5 en avril en raison de l'augmentation du prix des cigarettes et du tabac. Au cours des douze derniers mois l'indice du tabac et de l'alcool a augmenté de 4.2%.

Si l'on classe les articles qui entrent dans l'indice des prix à la consommation par biens et services, on obtient une image différente du mouvement des prix à la consommation. Entre mars et avril, l'indice d'ensemble des biens a augmenté de 0.6% l'augmentation la plus forte étant enregistrée pour les biens semi-durables (1.3%) par suite principalement de la hausse du prix de l'habillement. L'indice des biens non durables a progressé de 0.5% principalement en raison de la hausse des prix de journaux, des cigarettes et du tabac. L'élément des biens durables a augmenté de 0.6% en grande partie à cause de la hausse du prix des meubles et des automobiles. L'indice des services a accusé une hausse de 0.9% par suite de la hausse des prix du logement, des transports et de l'hygiène. Au cours de la période de douze mois se terminant en avril 1974, l'indice d'ensemble des biens a progressé de 11.4% et celui des services, de 7.1%.

*Il convient de signaler que les données sur l'indice des aliments, qui comportent dix chiffres dans l'ordinateur sont arrondies à une décimale près aux fins de la publication. Le fait d'arrondir entraîne parfois certaines anomalies apparentes comme celles qui se sont présentées ce mois-ci. On indique que l'indice d'ensemble des aliments a augmenté de 0.1% entre les mois de mars et avril (180.5 et 180.8 respectivement) - Variation qui semble se rapprocher davantage de 0.2%. Toutefois, les chiffres réels sont les suivants:

	April 1974 Avril	March 1974 Mars	Percentage change - Variation en %
Food Index — Total — Indice d'ensemble des aliments	180.7706415	180.5080651	0.1454651695
Rounded, these figures become — Chiffres arrondis	180.8	180.5	0.1

Transportation - Transports	145.9	144.2	133.9	133.9	1.2	-	9.0
Health and personal care - Soins personnels et hygiène	166.8	163.5	154.1	152.8	2.0	0.9	8.2
Recreation, education and reading - Loisirs, formation et lecture	152.9	150.6	143.0	142.5	1.5	0.4	6.9
Tobacco and alcohol - Tabacs et alcools	141.5	139.3	135.8	135.8	1.6	-	4.2
Security price indexes - (1961=100) - Indices des cours des valeurs mobilières							
Investors index - Total - Indices des portefeuillistes	178.2	190.6	189.1	189.5	- 6.5	- 0.2	- 5.7
Industrials - Total - Industriels	191.4	204.4	199.9	200.7	- 6.3	- 0.4	- 4.2
Industrial mines - Mines industrielles	129.1	144.5	134.2	138.8	- 10.7	- 3.3	- 3.8
Foods - Aliments	156.0	160.5	158.7	156.9	- 2.8	1.1	- 1.7
Beverages - Boissons	237.5	267.5	253.1	256.0	- 9.2	- 1.1	- 6.2
Textiles and clothing - Textiles et vêtements	174.7	178.3	162.0	165.7	- 2.0	- 2.2	7.8
Pulp and paper - Pâte et papier	140.6	152.2	132.8	133.1	- 7.6	- 0.2	5.8
Printing and publishing - Impression et édition	335.6	358.3	388.0	379.4	- 6.3	2.3	- 13.9
Primary metals - Métaux primaires	132.9	136.7	119.5	115.6	- 2.8	3.4	11.1
Metal fabricating - Fabrications des métaux	195.1	202.0	207.7	216.5	- 3.5	- 4.1	- 6.1
Non-metallic minerals - Minéraux non métalliques	177.6	183.6	190.6	186.8	- 3.3	2.0	- 6.1
Petroleum - Pétrole	302.1	318.2	327.6	334.7	- 5.1	0.9	- 7.1
Chemicals - Produits chimiques	119.3	122.8	118.9	119.9	- 2.9	- 0.8	0.0
Construction - Construction	170.3	175.5	145.8	144.9	- 2.9	0.6	16.1
Retail trade - Commerce de détail	144.9	154.3	177.5	182.7	- 6.1	- 2.8	- 18.1
Utilities - Total - Services publics	133.7	143.2	155.2	156.5	- 6.6	- 0.8	- 13.1
Pipeline - Pipe-line	129.5	141.0	167.1	171.1	- 8.2	- 2.3	- 22.1
Transportation - Transport	297.9	327.0	355.1	352.6	- 8.9	0.7	- 16.1
Telephone - Téléphone	87.3	90.3	88.6	90.0	- 3.3	- 1.6	- 1.1
Electric power - Énergie électrique	101.8	105.9	124.5	122.8	- 3.9	1.4	- 18.1
Gas distribution - Distribution du gaz	157.7	172.1	168.0	173.8	- 8.4	- 3.3	- 6.1
Finance - Total - Finances	177.0	190.7	185.8	183.1	- 7.2	1.5	- 4.1
Banks - Banques	214.3	227.7	215.5	210.7	- 5.9	2.3	- 0.1
Investment and loan - Placements et prêts	116.9	132.1	140.7	141.8	- 11.5	- 0.8	- 16.1
Mining - Actions minières							
Mining Index - Total - Indices des prix des titres minières	161.6	173.1	132.3	126.4	- 6.6	4.7	22.1
Gold - Or	267.3	284.0	161.4	141.4	- 5.9	14.1	65.1
Base metals - Métaux communs	105.1	113.8	117.6	119.3	- 7.7	- 1.4	- 10.1
Supplementary indexes - Indices supplémentaires							
Uranium - L'uranium	272.1	304.6	228.1	225.5	- 10.7	1.2	19.1
Primary oils and gas - Pétrole et gaz primaires	431.8	484.4	467.6	489.8	- 11.4	- 4.5	- 7.1

(1) Gross weighted, including inter industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 88.

(2) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.

(3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1973 are subject to revision. See notes page 89 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1973 sont sujets à révision. Voir les renvois de la page 89 pour les prix détaillés des grains de l'Ouest.

	1973 133.1	134.6	136.6	138.2	139.4	141.0	142.8	147.8	147.7	148.8	150.2	152.0	142.7
	1974 156.8	159.3	162.2	165.0									

- (1) Indexes for 1972, 1973 and 1974 are subject to revision. - Les indices pour 1972, 1973 et 1974 sont sujets à révision.
- (2) This industry was changed in commodity content, price sample and weights in accordance with
- (3) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.
- (4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augment des établissements et des produits a été établie, et les prix de ces produits ont été agrégés p total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certain produits utilisant l facteurs de pondération de 1971 et dont la période de référence est 1971.
- (6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (7) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

	1974	120.7	126.0	139.0	152.5									
Yellow brass metal scrap - Déchets de cuivre jaune														
	1972	81.1	82.8	90.1	89.2	88.9	84.5	80.1	80.3	81.6	80.4	79.4	81.0	83.3
	1973	89.4	97.1	104.9	106.7	104.3	107.8	120.9	125.2	127.0	129.4	135.8	141.2	115.8
	1974	141.4	144.7	157.5	173.9									
Copper metal scrap group - Total - Déchets de cuivre														
	1972	74.2	76.8	83.4	83.0	80.8	76.7	73.6	73.4	73.7	72.7	72.3	72.9	76.1
	1973	78.1	83.8	92.2	100.6	99.8	103.2	112.8	118.7	122.7	125.2	132.0	135.5	108.7
	1974	135.4	138.9	150.9	165.3									
Aluminum turnings, skimmings, dross and irony - Tournures, écume, scories.														
	1972	49.4	50.3	52.1	52.1	52.1	47.8	43.7	43.3	42.9	42.5	42.9	43.3	46.9
	1973	45.4	46.7	47.4	48.6	49.7	50.3	51.1	51.3	63.5	63.7	63.7	63.7	53.7
	1974	65.0	67.1	73.7	91.4									
New aluminum clips (low copper and dural) - Rognures d'aluminium neuf (à faible teneur en cuivre et duralumin)														
	1972	65.3	65.4	66.1	68.6	66.8	65.0	61.5	61.1	60.2	59.9	61.4	63.0	63.7
	1973	66.2	68.6	70.7	76.0	79.7	85.0	90.4	94.7	98.0	97.2	97.4	100.9	85.4
	1974	102.3	125.1	144.6	153.1									
Clean aluminum wire and sheets (1's and 2's) - Fil et tôles minces d'aluminium propres (1er et 2e choix).														
	1972	74.2	74.4	74.9	76.6	74.8	73.9	72.7	73.0	72.7	71.0	72.6	73.8	73.7
	1973	75.1	76.2	78.5	84.3	86.6	92.3	93.9	98.2	100.2	101.2	101.5	105.6	91.1
	1974	111.8	129.2	151.2	164.6									
Aluminum metal scrap group - Total - Déchets d'aluminium														
	1972	58.9	59.4	60.5	61.6	60.7	57.9	54.3	53.9	53.1	52.6	53.6	54.6	56.8
	1973	57.0	58.8	60.3	64.3	66.8	70.1	73.0	75.5	82.7	82.6	82.9	84.6	71.5
	1974	86.5	98.9	111.8	124.3									
Zinc metal scrap group - Total - Déchets de zinc														
	1972	94.3	98.8	105.2	111.4	114.1	118.0	118.5	118.8	125.3	123.4	127.7	130.9	115.5
	1973	137.8	151.4	158.8	164.2	150.0	157.1	169.2	179.2	201.2	229.0	232.8	268.1	183.2
	1974	280.9	289.5	305.8	348.6									
Battery plates, lugs and lead dross - Plaques, queues de plaques de batteries et rebut de plomb.														
	1972	71.6	72.4	77.5	79.2	77.6	76.2	74.5	74.1	73.0	70.3	70.4	70.4	73.9
	1973	73.0	77.3	79.1	82.0	84.5	83.3	86.5	88.7	89.4	98.4	98.5	103.1	87.0
	1974	107.0	115.1	119.2	134.2									
Scrap lead including cable lead - Déchets de plomb, y compris plomb pour câbles.														
	1972	79.1	79.9	87.4	99.4	95.2	98.1	94.8	94.3	94.2	88.7	88.5	83.1	90.2
	1973	87.1	90.8	98.2	99.9	100.9	99.3	102.0	101.9	102.5	105.3	107.3	113.3	100.7
	1974	125.6	133.6	141.9	158.2									
Lead metal scrap group - Total - Déchets de plomb														
	1972	72.7	73.5	79.0	81.4	79.8	78.8	76.9	76.5	75.5	72.6	72.6	72.1	76.0
	1973	74.9	79.1	81.2	84.1	86.4	85.2	88.3	90.5	91.2	99.7	100.0	104.7	88.8
	1974	109.4	117.8	122.2	137.5									

(1) All indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.

TABLE 5. SELECTED PRICES INDICATORS(I)

ALL-ITEMS Consumer Price Index Converted to 1949=100 - April 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Avril 1974 209.2

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)
TABLEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)
(1961=100)

	Apr. 1974 Avril	Mar. 1974 Mars	Apr. 1973 Avril	Mar. 1973 Mars	1973	1972	1971
All-items - Indice d'ensemble	161.9	160.8	147.3	145.7	150.4	139.8	133.4
Food - Aliments	180.8	180.5	156.2	152.2	152.0	141.4	131.4
Food for home consumption - Aliments consommés à la maison	175.4	175.7	152.3	148.2	157.9	137.5	127.4

Shortening - Graisse végétale	177.2	158.9	123.7	122.2	129.2	121.8	118.7
Salad/cooking oil(2) - Huile à frire ou de table(2)	136.4	120.5	100.0
Salad dressing - Vinaigrette	134.8	125.0	111.1	111.2	114.2	109.9	105.4
Meat, poultry and fish - Viande, volaille et poisson	192.5	202.2	174.5	169.4	182.6	147.7	130.9
Meat - Viande	186.0	198.3	174.2	169.4	181.3	147.5	131.2
Beef - Boeuf	201.7	216.6	181.6	177.5	190.4	157.6	144.3
Sirloin steak - Bifteck de surlonge ..	181.5	193.5	166.9	163.9	176.1	152.4	143.4
Round steak - Bifteck dans la ronde ..	203.2	224.0	187.2	184.8	195.2	160.4	148.0
Prime rib roast - Rôti de côtes de choix	183.2	199.2	175.5	173.0	181.6	154.3	139.9
Blade roast - Rôti de palette	187.2	213.4	177.4	169.7	182.0	148.9	133.1
Stewing beef - Boeuf pour ragoût	203.2	216.0	177.8	176.5	186.3	157.3	145.9
Hamburg - Boeuf haché	243.0	254.6	206.2	197.3	217.8	170.4	148.5
Liver - Foie	191.3	196.8	162.7	155.0	168.6	134.8	119.1
Pork - Porc	158.8	171.1	163.4	160.0	168.4	132.4	109.6
Bacon(3) - Bacon(3)	136.6	153.9	140.1	141.9	153.2	115.8	88.8
Smoked ham(4) - Jambon fumé(4)	154.5	166.6	149.4	144.9	158.8	125.7	110.7
Cottage Roll - Roulé de haut d'épaule	170.6	184.5	185.2	164.5	176.9	135.0	110.9
Loin cuts - Coupes de longe	173.7	183.0	191.3	190.2	187.5	153.0	122.7
Shoulder cuts - Coupes d'épaule	147.4	167.2	173.4	164.9	173.8	128.0	120.4
Sausages - Saucisses	183.7	187.1	158.2	150.0	166.4	130.9	119.6
Other meat - Autres viandes	191.0	194.5	172.9	164.3	178.8	146.6	133.1
Wieners - Saucisses de Francfort	168.7	172.2	157.4	142.6	160.1	127.8	119.0
Veal - Veau	243.4	247.1	217.8	214.3	225.5	189.9	165.0
Canned meat - Viandes en conserve ..	190.2	191.4	137.3	133.9	151.5	123.3	123.0
Poultry - Volaille	189.6	186.8	154.8	145.2	164.3	124.6	108.9
Chicken - Poulet	194.6	188.0	160.6	150.6	169.1	128.9	112.0
Turkey - Dinde	163.5	170.3	129.0	121.2	140.4	105.4	95.8
Fish - Poisson	274.4	272.8	204.2	201.7	222.3	180.5	157.0
Canned salmon - Saumon en boîte	240.4	240.6	157.6	158.2	181.3	149.0	143.0
Canned tuna(2) - Thon en boîte(2)	115.5	115.5	100.0
Eggs - Oeufs	155.2	153.1	123.1	113.5	136.5	94.7	87.3
Fruit and vegetables - Fruits et légumes ..	182.4	181.9	164.4	154.1	166.7	139.8	130.5
Fresh fruit - Fruits frais	183.7	183.0	175.9	150.2	175.6	143.2	132.7
Oranges - Oranges	117.6	129.5	122.7	120.9	119.8	104.4	111.9
Bananas - Bananes	70.0	70.3	83.1	73.9	82.8	79.3	76.2
Apples - Pommes	190.2	187.7	138.0	129.9	160.0	123.8	118.8
Grapefruit - Pamplemousses	138.3	147.4	137.8	135.5	158.7	153.4	154.8
Processed fruit - Fruits traités	164.5	161.4	137.9	137.7	142.4	127.6	122.7
Canned peaches - Pêches en conserve ..	171.8	168.1	153.7	153.3	155.9	140.8	135.5
Canned pears - Poires en conserve	143.3	139.7	131.4	130.0	132.7	124.5	120.7
Canned apple sauce(2) - Compote de pommes en conserve(2)	138.4	136.9	100.0
Canned apple juice(3) - Jus de pommes en conserve(3)	185.0	179.8	130.1	129.7	138.3	122.0	110.4
Canned orange juice - Jus d'oranges en conserve	115.0	113.9	112.0	113.0	112.6	115.0	108.9
Raisins - Raisins secs	257.4	254.1	188.3	187.7	207.2	153.4	150.2
Fresh vegetables - Légumes frais	195.2	198.5	176.7	173.0	180.6	147.0	135.0
Potatoes - Pommes de terre	286.0	272.4	197.5	187.8	212.3	128.2	114.7
Tomatoes - Tomates	190.8	189.8	148.6	168.6	173.7	167.5	162.2
Lettuce - Laitue	160.7	187.8	190.3	167.2	189.3	162.9	160.8
Carrots - Carottes	122.0	120.8	124.6	122.0	126.6	124.9	123.4
Celery - Céleri	151.3	159.9	153.5	185.9	167.4	164.2	141.6
Onions - Oignons	179.7	198.6	252.9	202.7	221.6	157.9	128.5
Cabbage - Choux	196.2	227.7	226.4	224.4	199.1	171.9	150.4
Turnips - Navets	156.2	156.7	172.1	164.4	182.0	154.2	125.1

Transportation services - Transports	190.6	186.7	176.8	176.7	179.2	174.8	168.1

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

June - Juin										

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

May - Mai								
June - Juin								

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for 1974 are subject to revision. Les indices pour 1974 sont sujets à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. - L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

(1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à révision.

(2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.

(3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).

(4) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.

(5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.

(6) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

Manitoba	152.9	153.8	140.8	144.6	161.1	159.7	167.9	
Saskatchewan	168.1	137.6	124.9	132.1	144.9	147.1	154.6	
British Columbia - Colombie-Britannique	129.7	119.4	126.6	143.2	134.4	139.0	142.0	

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in *Construction Price Statistics*, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, *Statistiques des Prix dans la Construction*, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to mill.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 - July 1973 were announced on November 6, 1973 for wheat, oats and barley. The estimates of Final payments for the 1973-74 crop year are based on wheat Board predictions of April 1974.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge. Les estimations des paiements totaux pour la campagne agricole 1973-74 sont fondées sur les prévisions d'avril 1974 de la Commission canadienne du blé.

Used in original indexes from Aug. 1972 to July 1973. - Utilisé dans les premiers indices d'août 1972 jusqu'en juillet 1973.
Incorporated retroactively in revised final indexes Aug. 1972 to July 1973. - Inclus rétroactivement dans les indices finals révisés d'août 1972 à juillet 1973.
Used in current indexes. - Utilisé dans les indices courants.

General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39=100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

30

$$\frac{p^1_{tN} \times p^2_{tN} \times p^3_{tN} \times \dots \times p^{30}_{tN}}{30}$$

30

$$\frac{p^1_{t \ 35-39} \times p^2_{t \ 35-39} \times p^3_{t \ 35-39} \times \dots \times p^{30}_{t \ 35-39}}{30}$$

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de définir exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix de produits. En tant que chiffre représentatif classique, on a une tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50 (Reference Paper No. 24)* et *Prices and Price Indexes 1949-52 (Vol. 23)* (no 62-501 à catalogue).

Indice des prix de trente matières industrielles (1935-39=100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

30

$$\frac{p^1_{tN} \times p^2_{tN} \times p^3_{tN} \times \dots \times p^{30}_{tN}}{30}$$

30

$$\frac{p^1_{t \ 35-39} \times p^2_{t \ 35-39} \times p^3_{t \ 35-39} \times \dots \times p^{30}_{t \ 35-39}}{30}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according

L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille de familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense de familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation de familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère

to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they measure, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing

power, and falling prices are associated with increasing purchasing power. The category of goods presents three sub-categories (durable goods, semi-durable goods, non-durable goods) determined in function of the average useful lifetime criteria. D' autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). A l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. A partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

A mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est

power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is $\$90.91 ((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B

liée à la baisse du pouvoir d'achat de la monnaie, et la baisse prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice prix à la consommation. Ainsi, en janvier 1973, par rapport niveau de 1961, les prix à la consommation mesurés par l'I.F. avaient progressé de 44.5%, de sorte qu'un panier équivalent biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (Tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre près le cas d'une famille en particulier faisant partie du groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait compte les changements de prix à la consommation peut être calculée en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans la proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des salaires moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de l'indice des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 par le montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera $\$90.91 ((100.0/110.0) \times \$100)$ que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant

adjusted figure of \$90.91. Assuming the week A average of \$0.00 as an index equal to 100, the week B index becomes 13.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 10% rise in money wages $((\$100.00-\$80.00/\$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is 102.98 $((146.23/142.0) \times 100)$. (The wage and the price index both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, wage data adjusted by the consumer price index (which is a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce wages to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of wages in real earnings calculated from averages of gross wages may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real

la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00-\$80.00/\$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de

wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city,

la rémunération effective ne sert pas à mesurer les variations de niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes qui comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherches. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons de prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour des mesures de prix de détail tirées précédemment jusqu'à mai 1971 ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969 et avril 1972 de *Prix et indices des prix* (no 62-002 catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et assortissant autant que possible les points de vente au détail de type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mou-

ver the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. The data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time

Farm Input Price Indexes replace one of the two component indexes of the previously published series, Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from forward.

A detailed description of concepts, methods and data is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is

ments relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est

reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes*, 1961=100, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto and Montreal stock exchanges.

The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the investor's mining and supplementary stock indexes are Thursday's closing quotations from the exchange (Montreal, Toronto, Vancouver or Calgary) with the highest volume for a particular stock, as reported in the Daily Canadian Data Bank of the Financial Post Computer Services Department. For preferred stocks, prices are monthly weighted averages of the daily closing price in which weights are daily total volume. The price reference base for the indexes is the year 1956, and the indexes express prices as a percentage of price in 1956, arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the indexes, apart from the shift in the price reference base, was the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials, 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) were replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) were continued. The major group utilities was continued but the Pipelines index was added as a sub-group and the previous Power and Traction sub-group was replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A major group Finance was composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights which were previously limited to major groups, were extended to sub-groups. Weights in the index continue to be based on shares outstanding.

A revision of the Security Price Indexes to the 1971=100 base is under development.

For the list of stocks currently included in the Investors Index and Preferred Index, see *Prices-and-Price-Indexes* for March 1974.

reprise dans *Prices and Price Indexes* de septembre 1971 (62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes*, 1961= (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour famille agricole des séries de 1935-39 par un équivalent à jour ou a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières mesurent le temps l'incidence du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un actionnaire hypothétique (par opposition au spéculateur). Le portefeuille comprend des actions de sociétés canadiennes cotées à la Bourse de Toronto et de Montréal.

Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres miniers et les indices supplémentaires sont cours de fermeture de jeudi (Montréal, Toronto, Vancouver ou Calgary) affichant le volume le plus élevé pour une valeur particulier, d'après la Banque des données canadiennes quotidiennes du Service de l'informatique du *Financial Post*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles des cours de clôture de chaque jour et les poids, le volume quotidien total. La période de référence pour les indices est l'année 1956 et les indices représentent les prix exprimés en pourcentage des prix de 1956 recalculé sur la base 1961=100.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de cette publication. La modification la plus importante à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice : mines industrielles, boissons, textiles et habillement, pâte à papier, et huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes : l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe des banques et de l'ancien indice supplémentaire investissements prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

On prépare actuellement une révision des Indices des cours des valeurs mobilières sur la base 1971=100.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix-et-indices-des-prix* de Mars 1974.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflator (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI (2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rates for material supplied by the Labour Standards Branch, Department of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining components with the weights as shown will not provide a composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (no 62-002). This index is found in Table 20 of *Prices and Price Indexes* (no 62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (no 62-006).

Gross National Product Division, Statistics Canada.
Industry Selling Price Indexes 1956-1968 Cat. 62-528.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices—and—Price—Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtes a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.(2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968*, no 62-528 au catalogue.

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. L'Association publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyennant des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les salaires moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de construction non résidentielle, ou commerciale, et que les taux pour les métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentage des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentage comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses propres besoins.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction Canada* (no 62-520 au catalogue de Statistique Canada). L'index général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as sewer pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by the determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are those paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and supplying electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structures would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. Such uses of the indexes introduced in this publication have specific short-comings. Nonetheless, they may be helpful for purposes provided the users understand the deficiencies. The reader is asked to make particular note of Section 6 of Occasional Paper Catalogue 62-526 Price Indexes of Electric Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are specific, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component indexes and their weights included in the aggregate index presented herein are inappropriate for a particular use, the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichage d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certain matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par le ministère aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de

utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes de grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, compteurs, les transformateurs de distribution et les dépenses main-d'œuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et postes de manœuvre et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage sont exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de l'enquête.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which has been described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to reflect expenditure data of machinery and equipment for change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment and phases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in the indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices and Cost Collections from manufacturers most of whom reside in the United States.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'œuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

(1) Available in English only.

(2) A comprehensive statistical report on wholesale, farm consumer and security prices and price indexes covering intensively the period 1949-52 and more broadly earlier periods, in some cases from 1913; brief text is included.

Remittances should be in the form of cheque or money order, made payable to the Receiver General of Canada and forwarded to the Publications Distribution Unit, Financial Control Section, Statistics Canada, or to the Queen's Printer, Ottawa, Canada.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

NOTES ON PRICES AND PRICE INDEX NUMBERS

Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) rose 1.3% higher in May to 167.7 from the April index of 165.5. It was 20.2% higher than the May 1973 index of 139.5.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the petroleum and coal products group, particularly in the petroleum refining industry (10.8%). Increases also occurred in the primary metals group reflecting higher prices registered in iron and steel mills industry (8.2%), and in smelting and refining (1.0%). Price decreases recorded in manufacturers of industrial chemicals (4.1%) were mainly responsible for advances in the chemical products group.

Decreases for the period were relatively few, the most notable occurring in the wood products group where the sawmills and planing mills industry declined (-2.3%).

NOTES SUR LES PRIX ET LES INDICES DE PRIX

Indice des prix de vente dans l'industrie: industries manufacturières (1961=100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières a progressé de 1.3%, passant de 165.5 en avril à 167.7 en mai. L'augmentation est de 20.2% par rapport à l'indice de mai 1973 (139.5).

Les principaux facteurs qui ont contribué à faire monter l'indice d'ensemble, ont été une hausse dans le groupe des produits du pétrole et de charbon, en particulier dans les raffineries de pétrole (10.8%). On a aussi observé des augmentations dans le groupe de la première transformation des métaux imputables à une hausse des prix dans l'industrie du fer et de l'acier (8.2%) ainsi que dans la fonderie et l'affinage (1.0%). Les hausses de prix enregistrées chez les fabricants de produits chimiques industriels (4.1%) expliquent en majeure partie l'augmentation de l'indice du groupe des produits chimiques et connexes.

Il y a eu relativement peu de diminutions en mai; la plus importante s'est produite dans le groupe des produits du bois, à la suite d'une baisse de 2.3% dans les scieries.

General Wholesale Price Index (1935-39=100)

The general wholesale price index rose 0.1% in May to 453.5 from the revised April index of 453.0. It was 26.0% higher than the May 1973 index of 359.8. Four of the eight major group indexes were higher, while four declined.

The non-metallic mineral products group index moved up 3.5% in May to 325.1 from the revised April index of 314.1 on higher prices for coke, whose index rose 16.9% between April and May. It was 46.3% higher than May 1973 index. The non-ferrous metals group advanced 3.1% to 436.0 from the revised April index of 422.9 due to sharp price increases for silver and antimony. The iron products group index moved 2.5% higher to 440.5 from 429.6. Advances to a lesser degree were noted in the chemical products group, 0.2% to 306.1 from the April index of 305.6.

The wood products group index moved 1.4% lower to 563.3 from the revised April index of 571.2 reflecting declines in cedar, spruce, fir and hemlock. The animal products group index declined 1.0% to 474.2 from the revised April index of 479.0. More moderate decreases were recorded in the vegetable products group index to 465.1 from the revised April index of 469.2 and the textile products group index to 426.0 from 429.5.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 0.1% pas de 453.0 en avril (indice rectifié) à 453.5 en mai. Ceci repré- sente une augmentation de 26.0% par rapport à mai 1973 (359.8). Quatre des huit principaux groupes ont progressé et quatre diminué.

L'indice des minéraux non métalliques a progressé de 3.5% passant de 314.1 en avril (indice rectifié) à 325.1 en mai, à la suite d'une hausse de 16.9% du prix du coke entre avril et mai. L'indice des métaux non ferreux a progressé de 3.1%, passant de 422.9 en avril (indice rectifié) à 436.0 en mai, à la suite d'une soudaine augmentation du prix de l'argent et de l'antimoine. L'indice des produits du fer a progressé de 2.5%, passant de 429.6 à 440.5. On a observé une plus faible progression (0.2%) de l'indice des produits chimiques, qui est passé de 305.6 en avril à 306.1 en mai.

L'indice des produits du bois a régressé de 1.4%, passant de 571.2 en avril (indice rectifié) à 563.3 en mai, par suite des baisses du prix du cèdre, de l'épinette, du sapin et de la pruche. L'indice des produits d'origine animale a diminué de 1.0%, passant de 479.0 en avril (indice rectifié) à 474.2 en mai. On a observé des baisses plus modérées dans l'indice des produits d'origine végétale, qui est passé de 469.2 en avril (indice rectifié) à 465.1 en mai, ainsi que dans celui des matières textiles qui est passé de 429.5 à 426.0.

Security Price Indexes (1961=100)

The investors' index of common stocks decreased 8.9% to 162.3 in May. Of the three major groups, industrials decreased 9.6% to 173.2, utilities 6.7% to 124.8 and finance 9% to 163.0. Among the thirteen industrial sub-groups, a 1% increase to 121.9 was recorded for chemicals; printing and publishing moved up 2.5% to 343.9. Losses were recorded for all other sub-groups, the largest being for petroleum (down 20.1% to 241.5). For utilities, the five sub-groups showed decreases, ranging from 9.1% for electricity (92.5) to 2% for telephone (83.6). The decrease in finance was due to a 7.9% loss to 197.4 in banks and a 8.0% loss to 107.6 in investments and loans.

In the same period, the index of mining stock prices moved down 11.9% to 142.4, reflecting a 12.9% decrease to 232.8 in gold and a 10.5% decrease to 94.1 in base metals.

As for the two supplementary indexes, uranium was down 10.1% to 244.6, while primary oils and gas dropped 1% to 345.2.

The preferred stock index was down 7.1% from 67.9 in April to 63.1 in May.

Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 0.2% to 507.6 in May from the revised April index of 508.6. A decrease of 1.0% to 536.7 from a revised April index of 542.0 in the animal products index reflected lower prices for raw wool, eggs and hogs on both Eastern and Western markets, and for steers and calves in the East, and lambs in the West. High prices were shown for fluid milk on both markets and for lambs and poultry in the East.

The field products index moved up 0.7% to 478.4 from the revised April index of 475.1. Price increases were shown for corn on both Eastern and Western markets, for potatoes in the East and for flax in the West. Lower prices were shown for wheat in the East, and for potatoes and rye in the West.

Thirty Industrial Materials Prices Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, showed a decrease of 0.3% to 490.1 in May from the April index of 491.7. Prices were higher for six commodities, lower for seven and unchanged for seventeen. Principal changes included increases for seed oil, iron ore, steel bars, raw sugar and tin while decreases were recorded for raw wool, raw cotton, spruce, domestic wheat, beef hides and hogs.

Indices des cours des valeurs mobilières (1961=100)

L'indice des cours des actions ordinaires a diminué de 8.9% en mai, pour s'inscrire à 162.3. Parmi les trois grands groupes, les valeurs industrielles ont enregistré une perte de 9.6% pour s'établir à 173.2, les services publics accusent une baisse de 6.7% pour se fixer à 124.8 et les finances ont perdu 7.9% pour marquer 163.0. Parmi les treize sous-groupes industriels, une hausse de 2.1% est à signaler dans le prix des actions des produits chimiques (121.9); les valeurs de l'impression et de l'édition ont augmenté de 2.5% pour atteindre 343.9. Tous les autres sous-groupes industriels ont enregistré une perte dont la plus importante est 20.1% dans le cas du pétrole (241.5). En ce qui concerne les services publics, les cinq sous-groupes ont enregistré une diminution variant de 9.1% dans le cas de l'énergie électrique (92.5), à 4.2% pour les actions des compagnies de téléphone (83.6). La baisse de l'indice des finance est due aux pertes de 7.9% de l'indice bancaire (197.4) et de 8.0% des valeurs des placements et des prêts (107.6).

Au cours de la même période, l'indice des prix des titres miniers a diminué de 11.9% pour s'établir à 142.4, à la suite d'une perte de 12.9% des aurifères qui s'inscrivent à 232.8 et à une baisse de 10.5% des métaux communs qui se sont fixé à 94.1.

Pour ce qui est des deux indices de prix supplémentaires, on a observé une diminution de 10.1% dans le cas de l'uranium qui s'est fixé à 244.6, alors que le pétrole et le gaz primaires accusaient une baisse de 20.1% et tombait à 345.2.

L'indice des actions privilégiées a diminué de 7.1% tombant de 67.9 en avril à 63.1 en mai.

Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a régressé de 0.2% passant de 508.6 en avril (indice rectifié) à 507.6 en mai. La baisse de 1.0% de l'indice des produits d'origine animale, qui est passé de 542.0 en avril (indice rectifié) à 536.7 en mai, s'explique par la baisse du prix de la laine brute, des oeufs et des porcs sur les marchés de l'Est et de l'Ouest, des bouvillons et des veaux dans l'Est et des agneaux dans l'Ouest. On a observé une hausse du prix du lait de consommation sur les deux marchés ainsi que des agneaux et de la volaille dans l'Est.

L'indice des produits de grande culture a progressé de 0.7%, passant de 475.1 en avril (indice rectifié) à 478.4 en mai. On a observé une hausse du prix de foin sur les deux marchés, des pommes de terre dans l'Est et du lin dans l'Ouest. Il y a eu baisse du prix du maïs dans l'Est, ainsi que des pommes de terre et du seigle dans l'Ouest.

Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a régressé de 0.3%, passant de 491.7 en avril à 490.1 en mai. Six produits ont enregistré une hausse de prix, sept ont accusé une baisse et dix-sept sont demeurés stationnaires. Les principales variations comprennent une hausse du prix de l'huile de lin, du minerai de fer, des lingots d'acier, du sucre brut et de l'étain ainsi qu'une baisse du prix de la laine brute, du coton brut, des sciages d'épinette, du blé canadien, des peaux de boeuf et des porcs.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) rose 1.7% to 164.6 in May from 161.9 in April. About one-half of this rise was attributable to a 3% advance in food prices; a further one-quarter of the overall increase was accounted for by higher retail prices for petroleum products. Every major component contributed to a 1.2% rise in All-Items other than Food. The indexes for Housing and for Transportation rose 1.2% and 1.7%, respectively. The Recreation, Education and Reading component climbed 1.1% and that for Clothing increased 0.7%. A rise of 0.9% was registered both for the Tobacco and Alcohol and for the Health and Personal Care elements. Between May 1973 and May 1974, the All-Items Index advanced 10.9%.

The Food index advanced 3.0% to 186.1 in May from 180.8 in April. Between April and May the price of food for home consumption rose 3.3% while food eaten away from home increased 1.5%. Higher prices for fresh produce accounted for two-fifths of the rise in the total food index. In the latest month the price of bananas rose 40%, tomatoes 30%, potatoes 18% and lettuce 15%. Over the twelve months ending in May 1974 the price level for fresh vegetables was up 16.4% and for fresh fruit up 9.5%. After declining in the preceding two months, the beef index moved up 3.9% between April and May to a level 17% above a year earlier. Pork prices, by contrast, continued to move downwards, falling 1.9% in the latest month to a level almost 20% below their September 1973 peak. The poultry and the egg indexes also registered declines in the latest month; poultry was down 1.6% and eggs 1.4%. Among dairy products, the fresh milk index advanced 4.1% and powdered skim milk went up 19.6%. Evaporated milk, ice cream, butter and cheese also rose in price. While price levels of flour and bread were virtually unchanged, other bakery products such as cookies, cake mixes and crackers registered increases between April and May. Fats and oils moved up 6.8%, on average, in the latest month; over the twelve month period to May 1974, margarine prices rose 70% and cooking oil almost 50%. After declining 4.4% in the previous month, sugar prices advanced 6.8% to a new peak nearly 125% above a year earlier. Various sugar related products such as soft drinks, jelly powders and jam also recorded price increases in the latest month, as did most frozen and convenience food items. Between May 1973 and May 1974 the total Food index moved up 18.3%, with the price of food consumed at home rising 18.1% and food eaten away from home 19.0%.

The Housing index advanced 1.2% to 163.4 in May from 161.4 in April with about half the increase attributable to a 15% surge in the average price of fuel oil. Furniture prices moved up since the preceding month and the general household supplies index also advanced, despite lower consumer prices for some cleaning items following removal of the Ontario sales tax. In the shelter component of the Housing index, the home-ownership element rose 1.1% because of

Mouvements des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961=100) a augmenté de 1.7%, passant de 161.9 en avril à 164.6 en mai. Près de la moitié de cette avance est attribuable à une hausse de 3% du prix des aliments; un quart de l'augmentation totale est attribuable à la hausse du prix de détail des produits du pétrole. Tous les principaux éléments ont contribué à la hausse de 1.2% de l'indice d'ensemble (sans les aliments). Les indices de l'habitation et des transports ont progressé de 1.2% et de 1.7%, respectivement. L'indice loisirs, formation et lecture a monté de 1.1% et celui de l'habillement, de 0.7%. Les éléments tabac, alcools et soins personnels et hygiène ont tous deux augmenté de 0.9%. Entre mai 1973 et mai 1974, l'indice d'ensemble a progressé de 10.9%.

L'indice de l'alimentation a progressé de 3.0%, passant de 180.8 en avril à 186.1 en mai. D'avril à mai, les prix des aliments consommés à la maison a augmenté de 3.3% alors que celui des repas pris à l'extérieur a monté de 1.5%. La hausse du prix des fruits et légumes frais rend compte des deux cinquièmes de la hausse de l'indice total des aliments. Au cours du mois dernier, le prix des bananes a monté de 40%, celui des tomates, 30%, celui des patates, 18% et celui de la laitue, 15%. Au cours des douze mois se terminant en mai 1974, le niveau du prix des légumes frais a monté de 16.4% et celui des fruits frais, de 9.5%. Après avoir régressé au cours des deux mois précédents, l'indice du prix du bœuf a avancé de 3.9%, d'avril à mai, atteignant un niveau supérieur de 17% à celui d'il y a un an. Par contre, le prix du porc a continué de diminuer et est tombé de 1.9% au cours du mois observé pour s'établir à un niveau inférieur de près de 20% au sommet atteint en septembre 1973. Les indices de la volaille et des oeufs ont aussi fléchi pendant le mois observé; le prix de la volaille a baissé de 1.6% et celui des oeufs, de 1.4%. Parmi les produits laitiers, l'indice du lait frais a avancé de 4.1% et celui du lait écrémé en poudre, de 19.6%. Le prix du lait évaporé, de la crème glacée, du beurre et du fromage a aussi monté. Alors que les prix de la farine et du pain n'ont pour ainsi dire pas varié, ceux d'autres produits de boulangerie tels que les biscuits, les mélanges à gâteaux et les biscuits salés, ont monté d'avril à mai. Les prix des matières grasses et des huiles ont monté de 6.8% en moyenne au cours du mois dernier; au cours de la période de douze mois se terminant en mai 1974, le prix de la margarine a augmenté de 70% et celui de l'huile de cuisson, de près de 50%. Après avoir baissé de 4.4% le mois précédent, le prix du sucre a avancé de 6.8% pour atteindre un nouveau sommet dépassant de presque 125% le niveau d'il y a un an. Le prix de divers produits à base de sucre tels que les boissons gazeuses, les poudres à gelée et les confitures a aussi monté au cours du mois dernier, de même que la plupart des prix des aliments congelés et des plats cuisinés. De mai 1973 à mai 1974, l'indice total des aliments a progressé de 18.3%, le prix des aliments consommés à la maison augmentant de 18.1% et celui des repas pris à l'extérieur, de 19.0%.

L'indice de l'habitation a progressé de 1.2%, passant de 161.4 en avril à 163.4 en mai; près de la moitié de cette avance est attribuable à une hausse de 15% du prix moyen du mazout. Les prix des meubles ont monté par rapport à ceux du mois dernier. L'indice des fournitures générales de ménage a aussi progressé malgré la baisse du prix payé par le consommateur pour certains articles de nettoyage par suite de l'abolition de la taxe de vente en Ontario. Quant à l'élément logement de l'indice de l'habitation,

creases in the indexes for new houses, mortgage interest and repairs; rents moved up 0.2%. In the latest twelve months, the Housing index rose 8.0%.

The Clothing index rose 0.7% to 150.5 in May from 149.5 in April. Increases were recorded in all major components except footwear which declined fractionally mainly in response to the removal of the Ontario sales tax on footwear retailing for \$30 or less. Men's and women's clothing prices rose, on average, 1.2% and 0.9%, respectively. Children's wear moved up 0.5% and continuing increases for cotton and synthetic fabrics caused the piece goods index to rise 0.7%. In the latest twelve months, the Clothing index went up 9.5%.

The Transportation index advanced 1.7% to 148.4 in May from 145.9 in April. Over four-fifths of this increase was attributable to the impact of higher gasoline prices which, by the third week in May, registered an average rise of 6.6% over the preceding month. The motor oil index moved up 0.2%. The average price of new cars edged up 0.2% mainly in response to increased quotations for some domestic models. Among public transportation items, taxi fares increased in Toronto while local bus fares rose in Quebec City. Inter-city travel prices moved up 0.9% largely because of seasonally higher trans-Atlantic air fares. The May Transportation index was 10.0% higher than a year earlier.

The Health and Personal Care index rose 0.9% to 168.3 in May from 166.8 in April. In health care, the pharmaceutical index moved up 1% as increases were recorded for both prescribed and non-prescribed drugs. Within personal care, higher prices for men's haircuts and women's hairdressing outweighed average price declines for a number of personal supplies that reflected, in part, the removal of the 7% Ontario sales tax. The Health and Personal Care index was 7.7% higher than a year earlier.

The Recreation, Education and Reading index rose 0.7% to 154.6 in May from 152.9 in April. Higher prices for recreation equipment, including boats and motors, photographic supplies and toys, accounted for about two-thirds of the increase. Among other recreational items, movie admission prices rose in a number of major cities. In the reading component, newspaper subscription rates rose in Ottawa. In the latest twelve months, the Recreation, Education and Reading index moved up 7.5%.

The Tobacco and Alcohol index rose 0.9% to 142.8 in May from 141.5 in April. Higher prices for home-consumed tobacco were recorded in Quebec and Nova Scotia; increases were also registered in a number of major cities for beer and liquor in licensed premises. In the latest twelve months, the Tobacco and Alcohol index rose 4.8%.

les frais de propriété ont augmenté de 1.1% en raison des augmentations des prix des maisons neuves, du taux d'intérêt hypothécaire et des frais de réparations; les loyers ont augmenté de 0.2%. Au cours des douze derniers mois, l'indice de l'habitation a augmenté de 8.0%.

L'indice de l'habillement a progressé de 0.7%, passant de 149.5 en avril à 150.5 en mai. On a observé des augmentations pour tous les éléments principaux sauf pour celui des chaussures qui a légèrement diminué par suite de l'abolition de la taxe de vente en Ontario pour les chaussures de moins de \$30. Les prix des vêtements pour hommes et pour femmes ont augmenté, en moyenne, de 1.2% et de 0.9% respectivement. Les prix des vêtements pour enfants ont monté de 0.5% et les hausses continues du prix du coton et des tissus synthétiques ont fait monter de 0.7% l'indice du tissu à la verge. Au cours des douze derniers mois, l'indice de l'habillement a avancé de 9.5%.

L'indice des transports a progressé de 1.7%, passant de 145.9 en avril à 148.4 en mai. Plus des quatre cinquièmes de cette augmentation est attribuable à la hausse du prix de l'essence qui, à la troisième semaine de mai, avait monté en moyenne de 6.6% par rapport au mois précédent. L'indice de l'huile à moteur a avancé de 1.7%. Le prix moyen des voitures neuves a monté de 0.2% en raison surtout de la hausse du prix de certains modèles canadiens. Parmi les éléments des transports publics, les tarifs des taxi ont augmenté à Toronto alors que les tarifs des autobus locaux ont augmenté à Québec. Les prix des transports interurbains ont monté de 0.9% surtout à cause de l'augmentation saisonnière des billets d'avions transatlantiques. L'indice des transports de mai a dépassé de 10.0% celui d'il y a un an.

L'indice des soins personnels et hygiène a progressé de 0.9%, passant de 166.8 en avril à 168.3 en mai. Pour ce qui est de l'élément hygiène, l'indice des produits pharmaceutiques a avancé de 1% en raison des augmentations enregistrées pour les médicaments prescrits et non prescrits. En ce qui concerne les soins personnels, la hausse du prix des coupes de cheveux pour hommes et des coiffures pour femmes a contrebalancé les baisses moyennes des prix d'un bon nombre de fournitures de soins personnels par suite de l'abolition de la taxe de vente de 7% de l'Ontario. L'indice des soins personnels et hygiène a dépassé de 7.7% celui de l'an dernier.

L'indice des loisirs, de la formation et de la lecture a progressé de 1.1% passant de 152.9 en avril à 154.6 en mai. La hausse des prix du matériel récréatif, y compris les embarcations et moteurs, les fournitures de photographie et les jouets, a rendu compte des deux tiers environ de cette progression. Parmi les autres articles de loisirs, le prix des billets de cinéma a monté dans certaines grandes villes. Dans l'élément lecture, les frais d'abonnement aux journaux ont augmenté à Ottawa. Au cours des douze derniers mois, l'indice des loisirs, de la formation et de la lecture a progressé de 7.5%.

L'indice des tabacs et alcools a avancé de 0.9%, passant de 141.5 en avril à 142.8 en mai. On a enregistré une hausse du prix de la bière consommée à la maison au Québec et en Nouvelle-Ecosse; on a aussi enregistré des augmentations du prix de la bière et des spiritueux dans les débits de certaines grandes villes. Au cours des douze derniers mois, l'indice des tabacs et alcools a augmenté de 4.8%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between April and May, the total goods index advanced 2.3% with the main impetus coming from non-durable goods which rose 3.0% mainly in response to higher prices for food, gasoline and fuel oil. The index for semi-durable goods rose 1.0% largely in response to higher clothing prices and the component for durable goods increased 0.4% mainly because of higher quotations for furniture and automobiles. A rise of 0.7% was recorded for the services index following increases in, amongst others, the shelter, health, personal care and clothing elements. In the latest twelve months the total goods index advanced 13.0% and that for services 7.2%.

Si l'on classe les articles qui entrent dans l'indice des prix de la consommation par biens et services, on obtient une image différente du mouvement des prix à la consommation. Entre avril et mai l'indice total des biens a progressé de 2.3% par suite principalement de l'augmentation de 3.0% de l'indice des biens non durables en raison surtout de la hausse du prix des aliments de l'essence et du mazout. L'indice des biens semi-durable a progressé de 1.0% à la suite principalement de l'augmentation du prix des vêtements et l'élément des biens durables a augmenté 0.4% surtout à cause de la hausse du prix des meubles et automobiles. On a observé une hausse de 0.7% de l'indice des services en raison des augmentations enregistrées entre autres pour le logement, les soins personnels et hygiène ainsi que les vêtements. Au cours des douze derniers mois, l'indice total des biens a augmenté de 13.0% et celui des services, de 7.2%.

Recreation, education and reading - Loisirs, formation et lecture	154.6	152.9	143.8	143.0	1.1	0.6	7.
Tobacco and alcohol - Tabacs et alcools	142.8	141.5	136.2	135.8	0.9	0.3	4.
Security price indexes - (1961=100) - Indices des cours des valeurs mobilières							
Investors index - Total - Indices des portefeuillistes	162.3	178.2	180.1	189.1	- 8.9	- 4.8	- 9.
Industrials - Total - Industriels	173.2	191.4	190.1	199.9	- 9.6	- 4.9	- 8.
Industrial mines - Mines industrielles	115.4	129.1	125.2	134.2	- 10.6	- 6.7	- 7.
Foods - Aliments	143.6	156.0	153.4	158.7	- 7.9	- 3.3	- 6.
Beverages - Boissons	226.2	237.5	248.2	253.1	- 4.8	- 1.9	- 8.
Textiles and clothing - Textiles et vêtements	166.1	174.7	146.2	162.0	- 4.9	- 9.7	13.
Pulp and paper - Pâte et papier	131.8	140.6	125.5	132.8	- 6.3	- 5.5	5.
Printing and publishing - Impression et édition	343.9	335.6	366.5	388.0	2.5	- 5.5	- 6.
Primary metals - Métaux primaires	124.5	132.9	116.0	119.5	- 6.4	- 2.9	- 7.
Metal fabricating - Fabrications des métaux	187.1	195.1	204.5	207.7	- 4.1	- 1.5	- 8.
Non-metallic minerals - Minéraux non métalliques	170.6	177.6	184.4	190.6	- 3.9	- 3.2	- 7.
Petroleum - Pétrole	241.5	302.1	307.6	327.6	- 20.1	- 6.1	- 21.
Chemicals - Produits chimiques	121.9	119.3	108.7	118.9	2.1	- 8.6	12.
Construction - Construction	154.9	170.3	142.9	145.8	- 9.1	- 2.0	- 8.
Retail trade - Commerce de détail	136.7	144.9	168.0	177.5	- 5.6	- 5.3	- 18.
Utilities - Total - Services publics	124.8	133.7	149.9	155.2	- 6.7	- 3.4	- 16.
Pipeline - Pipe-line	119.8	129.5	157.7	167.1	- 7.5	- 5.6	- 24.
Transportation - Transport	276.9	297.9	348.7	355.1	- 7.1	- 1.8	- 20.
Telephone - Téléphone	83.6	87.3	87.8	88.6	- 4.2	- 0.9	- 4.
Electric power - Énergie électrique	92.5	101.8	118.6	124.5	- 9.1	- 4.7	- 22.
Gas distribution - Distribution du gaz	148.4	157.7	156.3	168.0	- 5.9	- 7.0	- 5.
Finance - Total - Finances	163.0	177.0	175.8	185.8	- 7.9	- 5.4	- 7.
Banks - Banques	197.4	214.3	205.0	215.5	- 7.9	- 4.9	- 3.
Investment and loan - Placements et prêts	107.6	116.9	131.0	140.7	- 8.0	- 6.9	- 17.
Mining - Actions miniers							
Mining Index - Total - Indices des prix des titres miniers	142.4	161.6	131.2	132.3	- 11.9	- 0.8	8.
Gold - Or	232.8	267.3	172.0	161.4	- 12.9	6.6	35.
Base metals - Métaux communs	94.1	105.1	110.0	117.6	- 10.5	- 6.5	- 14.
Supplementary indexes - Indices supplémentaires							
Uranium - L'uranium	244.6	272.1	209.2	228.1	- 10.1	- 8.3	16.
Primary oils and gas - Pétrole et gaz primaires	345.2	431.8	418.1	467.6	- 20.1	- 10.6	- 17.

(1) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 88.

(2) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.

(3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1974 are subject to revision. See notes page 89 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1974 sont sujets à révision. Voir les renvois de la page 89 pour les prix détaillés des grains de l'Ouest.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES
TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

		1961 = 100												Annual Annuel	
Industries and selected commodities(1)		Month - Mois													
Industrie et certains produits(1)		J	F	M	A	M	J	J	- A	S	O	N	D		
Clay products manufacturers (from domestic clay) - Fabricants de produits de l'argile (domestique).	1970	119.9	119.9	120.1	120.8	121.1	121.1	121.1	121.1	121.4	121.4	122.6	122.6	121.1	
	1971	122.6	122.8	122.8	123.1	123.1	123.8	126.1	126.2	126.2	126.2	126.4	126.5	124.6	
	1972	128.5	129.2	129.1	129.3	129.2	129.3	129.4	129.8	130.1	130.1	131.7	132.6	129.9	
	1973	135.0	135.9	136.5	139.0	139.0	139.3	140.0	140.0	141.4	141.9	146.0	148.7	140.2	
	1974	152.5	158.1	159.2	161.4	161.9									
Brick, stiff mud (wire cut) process, face - Brique, procédé pâte ferme, de parement.	1970	119.7	119.7	119.7	120.7	120.7	120.7	120.7	120.7	120.7	120.7	123.0	123.0	120.8	
	1971	123.0	123.0	123.0	123.2	123.2	123.2	126.0	126.0	126.0	126.0	126.0	126.0	124.6	
	1972	128.5	128.9	128.9	128.9	128.9	128.9	128.9	129.4	129.4	129.4	132.3	133.1	129.6	
	1973	135.8	135.8	135.8	135.8	135.8	135.8	136.9	136.9	137.6	138.8	144.5	146.1	138.0	
	1974	149.6	154.6	155.8	157.9	157.9									
Brick, dry press, face - Brique, procédé à set de parement.	1970	109.6	109.6	109.6	109.6	109.6	109.6	109.6	109.6	109.6	109.6	109.6	109.6	109.6	
	1971	109.6	109.6	109.6	109.6	109.6	109.6	109.5	109.1	109.2	108.8	108.8	108.5	109.3	
	1972	109.6	109.6	109.4	109.3	109.0	108.4	108.7	108.7	110.8	110.8	110.9	111.4	109.7	
	1973	113.9	113.5	113.7	113.8	113.9	113.9	113.8	114.1	114.3	113.9	117.2	117.3	114.4	
	1974	116.9	120.1	123.7	123.6	123.2									
Structural tile, hollow blocks (incl. fireproofing and load-bearing tile) - Tuile de construction, blocs creux (y compris murs de refend et coupe-feu).	1970	131.7	131.7	133.7	133.7	133.7	133.7	133.7	133.7	133.7	133.7	133.7	133.7	133.4	
	1971	133.7	136.1	136.1	137.1	137.1	137.1	145.5	145.5	145.5	145.5	145.5	145.5	140.8	
	1972	149.4	149.4	149.4	149.4	149.4	149.4	149.4	150.9	150.9	150.9	150.9	150.9	150.0	
	1973	153.8	158.8	158.8	158.8	158.8	158.8	158.8	158.8	158.8	158.8	161.3	161.3	158.8	
	1974	174.2	186.2	186.2	186.2	186.2									
Drain tile - Tuyaux à drainage	1970	125.5	125.5	125.5	127.2	129.3	129.3	129.3	129.3	129.3	129.3	129.3	129.3	128.2	
	1971	129.3	129.3	129.3	129.3	129.3	135.3	135.3	136.5	136.5	136.5	138.5	138.5	133.6	
	1972	139.6	139.6	139.6	140.7	140.7	140.7	140.7	140.7	140.7	140.7	140.7	140.7	140.4	
	1973	140.8	140.5	145.7	145.7	145.7	148.2	148.2	148.2	155.7	155.7	155.7	166.6	149.7	
	1974	172.3	172.3	172.3	180.7	194.4									
Sewer pipe - Tuyaux d'égouts	1970	117.1	117.1	117.1	117.1	117.1	117.1	117.1	117.1	120.1	120.1	120.1	120.1	118.1	
	1971	120.1	120.1	120.1	120.1	120.1	120.1	120.1	120.1	120.1	120.1	120.1	121.7	120.2	
	1972	121.7	125.9	125.9	125.9	125.9	128.1	128.1	128.1	128.1	128.1	128.1	128.1	126.8	
	1973	134.7	140.5	140.5	165.9	165.9	165.9	165.9	165.9	165.9	165.9	167.8	173.2	159.8	
	1974	173.2	186.9	186.9	186.9	186.9									
Clay products manufacturers (from imported clay) - Fabricants de produits de l'argile (importée).	1970	117.0	116.6	117.1	116.8	116.3	117.0	116.2	115.8	115.7	117.3	118.6	118.6	116.9	
	1971	120.2	119.9	120.7	120.9	121.2	120.7	121.9	122.3	121.4	121.5	122.0	122.0	121.2	
	1972	123.0	124.7	124.7	124.7	124.7	124.7	124.7	124.7	124.7	124.7	124.7	124.9	124.5	
	1973	124.9	127.3	127.4	127.5	126.6	128.6	131.2	131.2	131.2	131.2	133.5	134.4	129.6	
	1974	142.1	142.4	142.8	146.0	146.3									
Tile, glazed, wall - Carreaux vitrifiés, de revêtement mural.	1970	103.5	102.1	104.2	102.8	100.7	103.5	100.1	98.7	98.0	95.3	100.7	100.7	100.9	
	1971	98.7	97.3	100.7	101.4	102.8	100.7	102.8	102.1	98.0	98.7	100.7	100.7	100.4	
	1972	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	100.1	
	1973	100.1	100.6	98.4	99.1	98.8	99.1	103.3	103.7	103.7	103.5	105.7	107.5	102.0	
	1974	107.8	108.2	107.6	113.5	114.7									
Glass manufacturers - Fabricants de verre	1970	120.1	120.1	126.4	126.4	126.4	126.4	126.4	126.4	126.4	126.4	126.4	126.4	125.4

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES
TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

Industries and selected commodities(1) Industrie et certains produits(1)	1961 = 100												Annual Annuel
	Month - Mois												Annual Annuel
	J	F	M	A	M	J	J	A	S	O	N	D	
	1971												
	1972												
	1973												
	1974												
Industry selling price index: manufacturing(7) - Indice de prix de vente dans l'industrie: industries manufactu- rières(7)	1970 119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.9	118.8	119.1
	1971 119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
	1972 124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
	1973 133.1	134.6	136.6	138.2	139.5	141.0	142.8	147.8	147.7	148.8	150.2	152.0	142.7
	1974 156.8	159.3	162.2	165.5	167.7								

- (1) Indexes for 1972, 1973 and 1974 are subject to revision. - Les indices pour 1972, 1973 et 1974 sont sujets à révision.
- (2) This industry was changed in commodity content, price sample and weights in accordance with
- (3) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.
- (4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels:

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

- (5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés au total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.
- (6) Motor gasoline prices are 'List' and may not be a reflection of actual transaction prices. - Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.
- (7) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - May 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Mai 1974 212.7

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

Alcoholic beverages - Boissons alcooliques ...	147.4	147.2	139.0	139.3	139.6	136.7	128.8
Beer for home consumption - Bière consommée à la maison	136.6	134.4	129.4	128.6	129.5	126.3	122.5
Liquor for home consumption - Spiritueux consommés à la maison	138.2	135.3	126.7	126.7	126.7	124.4	119.7
	133.4	133.4	132.6	132.6	133.1	130.3	128.3

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further information see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) April 1973=100. - Avril 1973=100.

(3) On a 1961=100 time base as of May 1973. - Sur base 1961=100 à partir de mai 1973.

(4) Indexes based on chain store prices in 34 cities. - Les indices sont basés sur les prix des magasins à succursales dans 34 villes.

TABLE 10. Consumer Price Index for Canada - Reclassified by Goods and Services(1)

TABEAU 10. Indice des prix à la consommation - Reclassé par biens et services(1)

(1961 = 100)

	May 1974 Mai	Apr. 1974 Avril	May 1973 Mai	Apr. 1973 Avril	1973	1972	1971
Goods - Biens	158.3	154.8	140.1	138.9	142.3	130.8	125.1
Durable goods - Biens durables	115.3	114.8	109.2	108.1	109.2	107.7	106.4
Automobiles - Automobiles	109.9	109.7	105.1	103.9	104.8	104.3	102.3
Furniture and floor covering - Meubles et revêtements de sol	145.0	143.4	130.6	128.4	131.6	125.8	123.1
Household appliances and equipment - Appa- reils et accessoires ménagers	112.0	111.9	106.3	105.6	106.9	104.8	103.2
Home entertainment and recreation equipment - Matériel récréatif	99.8	99.1	97.6	97.1	96.8	97.3	100.8
Semi-durable goods - Biens semi-durables	148.6	147.2	136.2	134.9	136.9	131.0	127.9
Clothing, footwear and piece goods(2) - Vêtements, chaussures, et tissus à la verge(2)	147.1	146.2	135.1	133.9	136.0	130.3	127.4
Household furnishings and utensils - Articles d'ameublement et articles ménagers	158.4	158.1	141.4	139.5	143.2	135.5	132.0
Other semi-durable goods(3) - Autres biens semi-durables(3)	152.8	148.8	139.7	138.0	138.6	132.7	128.3
Non-durable goods(4) - Biens non durables(4)	173.0	168.0	149.3	148.2	152.7	136.9	129.3
Non-durables excluding food - Biens non durables sans les aliments	150.5	145.9	134.4	133.3	136.3	129.5	125.9
Alcoholic beverages - Boissons alcooliques	136.6	134.4	129.4	128.6	129.5	126.3	122.5
Tobacco products - Produits du tabac	152.0	151.9	146.2	146.3	146.2	140.7	137.7
Domestic supplies - Fournitures de ménage	135.2	135.5	126.0	125.0	126.7	120.9	118.4
Health and personal care supplies - Pro- duits pour l'hygiène et les soins personnels	120.6	120.9	116.6	115.6	116.5	114.0	112.1
Other non-durables - Autres biens non durables	170.4	160.3	140.4	138.5	144.8	133.9	129.3
Services	178.2	177.0	166.2	165.2	167.6	157.9	150.1
Shelter services - Habitation	178.6	177.4	167.7	166.6	169.0	157.9	149.7
Household utilities - Services publics aux ménages	138.4	138.4	130.1	129.3	130.8	122.3	119.6
Domestic services - Services aux ménages	219.7	219.7	193.9	193.9	196.6	183.8	170.8
Health, personal care, and clothing services - Hygiène, soins personnels et services vestimentaires	192.4	189.9	171.7	169.4	173.3	161.9	152.7
Recreation, education, and communication services - Loisirs, formation et communications	156.1	155.4	150.4	149.6	151.2	144.7	137.9
Transportation services - Transports	191.7	190.6	177.1	176.8	179.2	174.8	168.1

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

June - Juin										

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

June - Juin										

(3) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

June - Juin								

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

	New passenger cars - Voitures neuves	(5.1)	107	110	106
	Gasoline - Essence	(2.4)	118	108	105
	Other automobile operation - Autres frais de voiture.	(2.7)	118	95	101
	Public transportation - Transports publics	1.8	94	97	104
5	Health and personal care - Soins personnels et de santé.	6.6	101	102	112
	Health care - Soins de santé	4.4	102	105	117
	Personal care supplies - Fournitures pour les soins personnels.	1.2	109	112	114
	Personal care services - Services de soins personnels.	1.0	87	75	90
6	Recreation and reading - Loisirs et lecture	4.7	97	101	104
7	Tobacco and alcohol - Tabacs et alcools	6.5	126	112	111

(1) For explanatory text concerning this table, see page 96. As well, inter-city indexes of retail price differentials are now being updated on a component by component basis and will be published as they become available. Details can be found in the Retail Prices and Living Costs Service Bulletin (Statistics Canada Catalogue No. 62-005), Vol. 3. No. 1, March 1974.

TABLEAU 14. Indices comparatifs des prix de détail par ville, mai 1971(1) Groupes choisis de biens et de services, niveau des prix à Winnipeg en mai 1971=100

(1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à révision.

(2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bul 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.

(3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).

(4) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.

(5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bul 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.

(6) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in content, profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

(1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.

(4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

(1) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service bulletin, 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des prix dans la construction, no 62-006 au catalogue.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières, par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) For further detailed explanation see occasional paper 62-526. - Pour plus de renseignements, voir le bulletin hors série No 62-526 au catalogue.

(4) For further detailed explanation see occasional paper 62-533. - Pour plus de renseignements, voir le bulletin hors série No 62-533 au catalogue.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961=100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix et d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", de bulletins sur les enquêtes annuelles au cours desquelles sont recueillies des statistiques sur les expéditions de produits, l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise sont pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans: "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en question. En outre, les prix des produits en acier inoxydable ont été retirés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois inclus dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to mill.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 - July 1973 were announced on November 6, 1973 for wheat, oats and barley. The estimates of Final payments for the 1973-74 crop year are based on wheat Board predictions of April 1974.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge. Les estimations des paiements totaux pour la campagne agricole 1973-74 sont fondées sur les prévisions d'avril 1974 de la Commission canadienne du blé.

Used in original indexes from Aug. 1972 to July 1973. - Utilisé dans les premiers indices d'août 1972 jusqu'en juillet 1973.

Incorporated retroactively in revised final indexes Aug. 1972 to July 1973. - Inclus rétroactivement dans les indices finals révisés d'août 1972 à juillet 1973.

Used in current indexes. - Utilisé dans les indices courants.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1_{tN}}{P^1_{t\ 35-39}} \times \frac{P^2_{tN}}{P^2_{t\ 35-39}} \times \frac{P^3_{tN}}{P^3_{t\ 35-39}} \times \dots \times \frac{P^{30}_{tN}}{P^{30}_{t\ 35-39}}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de mesurer exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, l'indice ne constitue pas une mesure du pouvoir d'achat du consommateur parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1_{tN}}{P^1_{t\ 35-39}} \times \frac{P^2_{tN}}{P^2_{t\ 35-39}} \times \frac{P^3_{tN}}{P^3_{t\ 35-39}} \times \dots \times \frac{P^{30}_{tN}}{P^{30}_{t\ 35-39}}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more additional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

The Consumer Price Index for Canada (1961 = 100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according

L'indice des prix à la consommation pour le Canada (1961 = 100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépenses des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère

to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the all-items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they measure, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing

plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). A l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. A partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

A mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est

power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is $\$90.91 ((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B

liée à la baisse du pouvoir d'achat de la monnaie, et la baisse prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.C.P. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 c ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (Tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., in n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendra en compte les changements de prix à la consommation peut être calculée en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans la proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des salaires moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de l'indice des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surevaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 au montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera $\$90.91 ((100.0/110.0) \times \$100)$, que l'on peut désigner comme étant la moyenne des salaires hebdomadaires pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant

adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 5% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is 102.98 $((146.23/142.0) \times 100)$. (The wage and the price index both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, wage data adjusted by the consumer price index (which is a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce earnings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real

la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est 102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de

wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city,

la rémunération effective ne sert pas à mesurer les variations niveaux de consommation des salariés ou de leurs familles, plutôt à montrer les tendances du pouvoir d'achat des salariés rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

A l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services couvrant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherches. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons de prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour des mesures de prix de détail tirées précédemment jusqu'à mai 1971 ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969 et avril 1972 de *Prix et indices des prix* (no 62-002 catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains de prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et assortissant autant que possible les points de vente au détail type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mo-

ver the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group and component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is

ments relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est

reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes*, 1961=100, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto and Montreal stock exchanges.

The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the investor's mining and supplementary stock indexes are Thursday's closing quotations from the exchange (Montreal, Toronto, Vancouver or Calgary) with the highest volume for a particular stock, as reported in the Daily Canadian Data Bank of the Financial Post Computer Services Department. For preferred stocks, prices are monthly weighted averages of the daily closing price in which weights are daily total volume. The price reference base for the indexes is the year 1956, and the indexes express prices as a percentage of price in 1956, arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the indexes, apart from the shift in the price reference base, was the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials, 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) were replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) were continued. The major group utilities was continued but the Pipelines index was added as a sub-group and the previous Power and Traction sub-group was replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A major group Finance was composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights which were previously limited to major groups, were extended to sub-groups. Weights in the index continue to be based on shares outstanding.

A revision of the Security Price Indexes to the 1971=100 base is under development.

reprise dans *Prices and Price Indexes* de septembre 1971 (62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes*, 1961=100 (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour ou on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières mesurent à travers le temps l'incidence du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un actionnaire hypothétique (par opposition au spéculateur). Le portefeuille comprend des actions de sociétés canadiennes cotées à la Bourse de Toronto et de Montréal.

Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres miniers et les indices supplémentaires sont des cours de fermeture de jeudi (Montréal, Toronto, Vancouver ou Calgary) affichant le volume le plus élevé pour une valeur particulier, d'après la Banque des données canadiennes quotidiennes du Service de l'informatique du *Financial Post*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles des cours de clôture de chaque jour et les poids, le volume quotidien total. La période de référence pour les indices est l'année 1956 et les indices représentent les prix exprimés en pourcentage des prix de 1956 recalculé sur la base 1961=100.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de cette publication. La modification la plus importante à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien index : mines industrielles, boissons, textiles et habillement, pâtes, papiers, et huiles (sous la désignation de pétrole). Le grand groupe de services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes : l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe des banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent d'être basés sur les actions en circulation.

On prépare actuellement une révision des Indices des cours des valeurs mobilières sur la base 1971=100.

For the list of stocks currently included in the Investors Index and Preferred Index, see *Prices—and—Price—Indexes* for March 1974.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system (2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (2-002). This index is found in Table 20 of *Prices and Price Indexes* (62-002). Full trade detail, by city, is published quarterly in the *Construction Price Statistics Service Bulletin* (2-006).

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix—et—indices—des—prix* de Mars 1974.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices—and—Price—Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'œuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. (2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

(1) Gross National Product Division, Statistics Canada.

(2) *Industry Selling Price Indexes 1956-1968* Cat. 62-528.

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968*, no 62-528 au catalogue.

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction* in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyennant les données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de construction non résidentielle, ou commerciale, et que les taux relatifs aux métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière. Les pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution pourcentuelle comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses propres

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'index général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as invert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de

utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

pondération, les indices de son choix, soit pour évaluer le d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, des lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses de main-d'œuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage sont exclus.

Par définition, l'expression "service d'électricité au client" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de l'enquête.

Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which is described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were fully supplied by major purchasers.

Conceptually purchasers' prices should be utilized in the indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices and Inflation collections from manufacturers most of whom reside in the United States.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de baraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- . . Figures not available.
- . . . Figures not appropriate or not applicable.
- Nil or zero.
- - Amount too small to be expressed.
- p Preliminary figures.
- r Revised figures.
- x Confidential to meet secrecy requirements of the Statistics Act.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- . . Nombres indisponibles.
- . . . N'ayant pas lieu de figurer.
- Néant ou zéro.
- - Nombres infimes.
- p Nombres provisoires.
- r Nombres rectifiés.
- x Confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

NOTES ON PRICES AND PRICE INDEX NUMBERS

NOTES SUR LES PRIX ET LES INDICES DES PRIX

Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) rose 0.8% in June to 169.3 from the May index of 167.9. It was 20.1% higher than the June 1973 index of 141.0.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the petroleum and coal products group where the petroleum refining industry advanced (7.4%) and in the chemical and chemical products group where higher prices were reflected in manufacturers of industrial chemicals (3.8%), manufacturers of soap and cleaning compounds (2.3%), and paint and varnish manufacturers (1.7%). Advances of a lesser degree occurred in foods and beverages group, metal fabricating and electrical products groups.

Decreases were evident in the wood products group with sawmills and planing mills showing lower level (-3.5%) and in the primary metals group with smelting and refining down (-1.4%).

Indice des prix de vente dans l'industrie: Industries manufacturières (1961=100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières a augmenté de 0.8%, passant de 167.9 en mai à 169.3 en juin. Il s'est accru de 20.1% par rapport à son niveau de juin 1973 (141.0).

Les progressions les plus importantes qui ont contribué à la variation de l'indice total de l'industrie manufacturière ont été observées dans le groupe des produits du pétrole et du charbon en particulier pour les raffineries de pétrole qui ont progressé de 7.4% et dans le groupe des produits chimiques en raison de la hausse des prix enregistrée par les fabricants de produits chimiques industriels (3.8%), les fabricants de savon et de produits de nettoyage (2.3%) et les fabricants de peinture et de vernis (1.7%). On a observé des hausses de moindre importance dans le groupe de aliments et boissons ainsi que dans le groupe de la fabrication de produits en métal et de produits électriques.

On a enregistré des baisses dans le groupe des produits du bois à cause de la baisse des prix dans les scieries et les ateliers de rabotage (-3.5%) et dans le groupe de la première transformation des métaux en particulier pour la fonte et l'affinage (-1.4%).

These indexes are preliminary. - Ces indices sont provisoires.

General Wholesale Price Index (1935-39=100)

The general wholesale price index decreased — 0.2% in June to 452.3 from the revised May index of 453.3. It was 23.0% higher than the June 1973 index of 367.8. Three of the eight major groups declined while five showed increases.

The vegetable products group index declined — 2.7% in June to 452.4 from the revised May index of 465.1 due mainly to lower prices recorded for grains, livestock and poultry feeds, fresh fruits and vegetable oil products. The wood products group index decreased — 1.1% in June to 558.2 from the revised May index of 564.1 with the most significant changes occurring for cedar, fir, hemlock and spruce. Decreases to a lesser degree were evident in the non-ferrous metals group.

The chemical products group index rose 3.2% in June to 318.3 from the revised May index of 308.5 due mainly to higher prices for explosives, soaps and detergents, inorganic chemicals, and paint and paint materials. Increases in livestock and fresh meats were responsible for advances in the animal products group index of 2.1% to 483.7 in June from the revised May index of 473.9. The non-metallic minerals group index advanced 1.8% in June to 330.9 from the revised May index of 325.1 due mainly to advances in asphalt, petroleum and its products, and lime. Advances of a lesser degree were shown in the iron products group 0.8%, and in the textile group 0.6%.

Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a régressé de 0.2% passant de 453.3 (indice rectifié) en mai à 452.3 en juin. Il s'est accru de 23.0% par rapport à l'indice de juin 1973 (367.8). Trois des huit groupes principaux ont diminué alors que les cinq autres ont augmenté.

L'indice du groupe des produits d'origine végétale a régressé de 2.7% passant de 465.1 (indice rectifié) en mai à 452.4 en juin, par suite principalement de la baisse des prix des céréales, des aliments pour le bétail et la volaille, les fruits frais et les produits d'huile végétale. L'indice du groupe des produits du bois a baissé de 1.1% passant de 564.1 (indice rectifié) en mai à 558.2 en juin; les baisses les plus fortes se sont produites pour le cèdre, le sapin, la pruche et l'épinette. On a observé des baisses d'importance moindre dans le groupe des métaux non ferreux.

L'indice du groupe des produits chimiques a progressé de 3.2% pour atteindre 318.3 en juin par rapport à l'indice rectifié de mai (308.5) en raison surtout de la hausse des prix des explosifs, des savons et détergents, des produits non organiques et de la peinture et des produits connexes. L'augmentation du prix du bétail et des viandes fraîches est responsable de la progression de 2.1% de l'indice du groupe des produits d'origine animale qui est passé de 473.9 (indice rectifié) en mai à 483.7 en juin. L'indice du groupe des minéraux non métalliques a progressé de 1.8% passant de 325.1 (indice rectifié) en mai à 330.9 en juin en raison principalement de la hausse du prix de l'asphalte, du pétrole et des produits connexes ainsi que de la chaux. On a observé des augmentations de moindre importance dans le groupe des produits du fer (0.8%) et dans le groupe des textiles (0.6%).

Security Price Indexes (1961 = 100)

The common stock prices index moved up 0.8% in June to 161.0 from 162.3 in May. Among the three major groups, industrials decreased 1.3% to 170.8, utilities 0.4% to 124.3 and finance moved up 1.6% to 165.6. Within the thirteen industrial sub-groups, 7 gains and 6 losses were registered. In utilities, the telephone companies' stock prices increased 1.4% to 84.7, while the electric power stock index moved up 3.7% to 95.9. The increase in the finance index resulted from a rise of 0.9% in banks (199.1) and a rise of 4.2% in investments and loans (112.0).

During the same period, the index of stock prices in mining decreased 2.9% to 138.2, gold was down 3.4% to 24.9 and base metals moved down 2.3% to 91.9.

In the case of the two supplementary indexes, uranium registered a decrease of 1.2% to 241.7 while primary oils and gas decreased 4.7% to 329.0.

The preferred stock index rose 0.8% to reach 64.6.

Canadian Farm Products Index (1935-39 = 100)

The price index of Canadian farm products at terminal markets advanced 2.0% to 518.0 in June, from the May index of 507.6. The animal products index advanced 3.4% to 518.0 from 536.7, on price increases for lambs, steers and hogs on both Eastern and Western markets, for butterfat and raw wool in the East and for calves and fluid milk in the West. Lower prices were shown for eggs on both markets, for poultry and for calves in the East and for raw wool in the West.

The field products index moved 0.6% higher to 481.2 from 478.4, reflecting higher prices for potatoes and rye on both markets and for hay in the East. Lower prices were shown for flax and hay in the West.

Thirty Industrial Materials Price Index (1935-39 = 100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 0.2% to 490.9 in June from the May index of 490.1. Prices were higher for eleven commodities, lower for eight and unchanged for eleven. Principal changes included increases for iron, unbleached sulphite pulp, copper, sisal, hogs, steers, steel sheets, raw wool, bleached sulphite pulp and iron scrap while decreases were recorded for raw rubber, wheat, beef hides, raw cotton, spruce lumber, raw sugar and linseed oil.

Indices des cours des valeurs mobilières (1961 = 100)

L'indice des cours des actions ordinaires a diminué de 0.8%, passant de 162.3 en mai à 161.0 en juin. Parmi les trois grands groupes, les valeurs industrielles ont fléchi de 1.3% pour se fixer à 170.8, les services publics ont baissé de 0.4% pour s'établir à 124.3 et les finances ont augmenté de 1.6% pour atteindre 165.6. Parmi les treize sous groupes industriels on a enregistré 7 gains contre 6 pertes. Dans le cas des services d'utilité publique les valeurs des compagnies téléphoniques ont gagné 1.4% pour se fixer à 84.7, alors que les actions de l'énergie électrique ont augmenté de 3.7% pour atteindre 95.9. L'augmentation de l'indice des finances est attribuable à un gain des banques de 0.9% pour s'établir à 199.1 tandis que les placements et les prêts gagnaient 4.2% pour s'inscrire à 112.0.

Au cours de la même période, l'indice du cours des titres miniers a diminué de 2.9% pour s'établir à 138.2; les aurifères ont enregistré une perte de 3.4% pour s'inscrire à 244.9 et les métaux communs ont diminué de 2.3% pour se fixer à 91.9.

Pour ce qui est des deux indices supplémentaires l'uranium a diminué de 1.2% pour s'établir à 241.7 alors que le pétrole et le gaz primaires descendaient de 4.7% pour s'inscrire à 329.0.

L'indice des actions privilégiées a augmenté de 0.8% pour s'établir à 64.6.

Indice des prix des produits agricoles canadiens (1935-39 = 100)

L'indice des prix des produits agricoles canadiens sur les marchés à terme est monté de 2.0%, passant de 507.6 en mai à 518.0 en juin. L'indice des prix des produits d'origine animale a progressé de 3.4% et est passé de 536.7 à 554.8 en raison de la hausse du prix des agneaux, des bouvillons et des porcs sur les marchés de l'Est et de l'Ouest, des matières grasses et de la laine brute sur les marchés de l'Est, et des veaux et du lait de consommation sur les marchés de l'Ouest. Sur les deux marchés, on a signalé une baisse du prix des oeufs; dans l'Est, il y a eu baisse du prix de la volaille et des veaux et dans l'Ouest, c'est le prix de la laine brute qui a baissé.

L'indice des prix des produits de grande culture a augmenté de 0.6%, passant de 478.4 à 481.2, par suite d'une hausse du prix des pommes de terre et du seigle sur les deux marchés et du foin dans l'Est. On a observé une baisse du prix du lin et du foin dans l'Ouest.

Indice des prix de trente matières industrielles (1935-39 = 100)

L'indice des prix de trente matières industrielles, calculé comme une moyenne géométrique non pondérée, est monté de 0.2% et a atteint 490.9 en juin au regard de 490.1 en mai. Les prix de onze marchandises ont augmenté, ceux de huit ont baissé et ceux de onze sont demeurés inchangés. Les principales variations comprennent une hausse du prix de la résine, de la pâte au sulfite non blanchie, du cuivre, du sisal, des porcs, des bouvillons, de l'étain, de la tôle, de la laine brute, de la pâte au sulfite blanchie et du minerai de fer et une baisse du prix du caoutchouc brut, du blé, de la ferraille, des peaux de boeuf, du coton brut, des sciages d'épinette, du sucre brut et de l'huile de lin.

Farm Input Price Index (1961=100) Second Quarter 1974

The Farm Input Price Index for Canada increased 1.9% in the 2nd quarter 1974 moving to 189.6 from a revised 1st quarter figure of 186.1. The eastern index moved up to 193.7 from its revised 1st quarter level of 190.1, an increase of 1.9%. The western index also rose 1.9% moving to 184.8 from a revised 1st quarter level of 181.4. Since 2nd quarter 1973, the Canada index rose 17.3% with increases of 18.2% in the East, and 16.2% in the West.

The groups which contributed most to the upward movement of the index were hired labour, building replacement, machinery replacement, motor vehicle operation, fertilizer and tools & supplies.

Consumer Price Movements

The Consumer Price Index for Canada (1961=100) rose 1.3% in June from 164.6 in May. Though all major components moved up, most of the impetus behind the latest month's advance was attributable to a 1.2% rise in the Housing index, to a 1.2% increase in the Food index (despite declines in beef, pork and egg prices) and to a 1.9% advance in the Transportation element. Clothing prices rose 1.0%, on average, and the index for Recreation, Education and Reading advanced 1.5%. The Health and Personal Care component rose 0.6%, while Tobacco and Alcohol went up 0.5%. In the latest month, the price level for All-Items other than Food rose 1.3%. Between June 1973 and June 1974, the All-Items Index advanced 11.4%.

The Food index advanced 1.2% to 188.4 in June from 186.1 in May as home-consumed food prices moved up, on average, 1.0% and prices of food eaten away from home rose 2.1%. Higher fresh produce prices were the main cause of the rise in the food at home index, more than offsetting declines in the indexes for beef, pork and eggs. In the latest month, prices of fresh vegetables and fruit rose, in general, by over 9% led by increases of about 40% for carrots, 30% for lettuce, 19% for bananas and 13% for apples. For the twelve months ending in June 1974 the price level of fresh vegetables increased by 17.6% and fresh fruit by 13.9%. In early June, beef and pork prices stood 2.0% below their levels of a month earlier, but poultry prices recorded a marginal increase. While poultry and beef quotations stood 17.8% and 9.1% higher, respectively, than in June 1973, pork was retailing, on average, 1.6% below its level of a year previous and about 21% below its peak of September 1973. Egg prices declined 2.7% in the latest month, but nevertheless were retailing at a level 17.6% higher than twelve months previous. The cereal and bakery products index rose 1.4% between May and June as most items surveyed registered increases. Dairy products, on average, recored a 0.6% rise and the fats and oils component rose 1.7%. Amongst other food items, sugar prices rose 3.5% to reach a level 127% above a year earlier. Various sugar-related products such as soft-drinks, jelly powder and jam also recorded increases in the latest month as did most frozen and convenience food items. Between June 1973 and June 1974, the total Food index moved up 17.4%, with the

Indices (1961=100) des prix des entrées dans l'agriculture, deuxième trimestre de 1974

L'indice canadien des prix des entrées dans l'agriculture augmenté de 1.9% au cours du 2e trimestre de 1974 pour atteindre 189.6 contre 186.1 (chiffre rectifié) au 1er trimestre. L'indice pour l'Est est passé de 190.1 (niveau rectifié de 1er trimestre) à 193.7, soit une augmentation de 1.9%. L'indice pour l'Ouest a également augmenté de 1.9%, passant de 181.4 à 184.8. Depuis le 2e trimestre de 1973, l'indice pour le Canada a augmenté de 17.3%, soit 18.2% dans l'Est et de 16.2% dans l'Ouest.

Les groupes qui ont le plus contribué à la progression de l'indice ont été la main-d'oeuvre salariée, le remplacement des bâtiments, le remplacement de machines, l'utilisation des véhicules automobiles, les engrais, les outils et fournitures.

Mouvements des prix à la consommation

L'indice des prix à la consommation pour le Canada (1961=100) est passé de 164.6 en mai à 166.7 en juin, soit une augmentation de 1.3%. Bien que toutes les grandes composantes aient progressé, l'augmentation du dernier mois est surtout attribuable à une hausse de 1.2% de l'indice de l'habitation, à une augmentation de 1.2% de l'indice des aliments (en dépit de baisses des prix du boeuf, du porc et des oeufs) et à une progression de 1.9% de la composante 'transports'. Les prix de l'habillement ont monté en moyenne de 1.0%, et l'indice des loisirs, de la formation et de la lecture a progressé de 1.5%. La composante 'services personnels et hygiène' a monté de 0.6%, tandis que les tabacs et alcools ont augmenté de 0.5%. Au cours du dernier mois, le niveau des prix pour l'ensemble des articles autres que les aliments a accru de 1.3%. Entre juin 1973 et juin 1974, l'indice d'ensemble a progressé de 11.4%.

L'indice des aliments est passé de 186.1 en mai à 188.4 en juin, soit une augmentation de 1.2%, les prix des aliments consommés à la maison ayant progressé, en moyenne, de 1.0% et ceux des aliments pris à l'extérieur, de 2.1%. L'augmentation des prix des légumes frais a été la principale cause de l'accroissement de l'indice des aliments consommés à la maison, car ils ont plus que compensé la chute des indices du boeuf, du porc et des oeufs. Au cours du mois le plus récent, les prix des légumes et des fruits frais ont augmenté, en général, de plus de 9%, les principales progressions étant celles des carottes (environ 40%), de la laitue (30%), des bananes (19%) et des pommes (13%). Pour la période douze mois se terminant en juin 1974, le niveau des prix des légumes frais a augmenté de 17.6% et celui des prix des fruits frais de 13.9%. Au début de juin, les prix du boeuf et du porc étaient 2.0% en deçà de leur niveau du mois précédent, tandis que les prix des volailles ont connu une augmentation marginale. Alors que les prix des volailles et du boeuf étaient de 17.8% et de 9.1%, respectivement, plus élevés qu'en juin 1973, le porc se vendait à un détail 1.6%, en moyenne, en deçà de son niveau de l'année précédente et environ 21% en deçà de son sommet de septembre 1973. Les prix des oeufs ont chuté de 2.7% au cours du dernier mois, mais se situaient néanmoins à un niveau de 17.6% plus élevé qu'il y a douze mois plus tôt. L'indice des céréales et produits de boulangerie a progressé de 1.4% de mai à juin, la plupart des articles observés ayant enregistré des augmentations. Les produits laitiers ont progressé de 0.6% en moyenne, et la composante huiles et corps gras a monté de 1.7%. Parmi les autres articles alimentaires, les prix du sucre ont monté de 3.5% pour atteindre

price of food consumed at home rising 16.7% and that for food away from home 20.7%.

The Housing index moved up 1.2% to 165.5 in June from 163.4 in May as a result of increases in both the shelter and the household operation components. Within shelter, the home-ownership element rose 1.3% because of increases in the indexes for mortgage interest, new houses and repairs; rents advanced 1.1%. In the household operation component, fuel oil prices rose 3.2%, on average, as increases were recorded in a number of cities across the country. Appliance and furniture prices rose 2.3% and 1.2%, respectively, reflecting increases in many centres. Advances were also recorded for linen and draperies and for floor coverings, and quotations for tableware and housewares also rose. Household supply items advanced 0.6% as most items surveyed registered increases. In the twelve months to June 1974, the housing index rose 8.8%.

The Clothing index advanced 1.0% to 152.0 in June from 150.5 in May as all major components registered increases. Over half of this rise was attributable to a 5.2% advance in clothing service charges as higher prices were recorded for laundry, dry cleaning and shoe repairs in a number of centres. Rises of 0.4% and 0.5% in the women's and men's wear indexes, respectively, resulted from advances in most items surveyed, while the index for children's clothing went up 0.8%. Footwear prices rose 0.4%, on average, and the piece goods index advanced 1.4%. In the twelve months to June 1974, the Clothing index rose 10.1%.

The Transportation index advanced 1.9% to 151.2 in June from 148.4 in May. For the second successive month the biggest contributor to the rise in the Transportation index was increased gasoline prices which rose 4.5% in June to reach a level over 25% higher than a year ago. Automobile prices went up 1.6%, on average, as a result of increased quotations for various models. The index for public transportation rose 1.1% mainly because of an advance in the train fares index and because of increases in some inter-city bus fares. The Transportation index rose 11.1% in the latest twelve months.

The Health and Personal Care index moved up 0.6% to 169.3 in June from 168.3 in May. Higher charges for prescribed drugs were the main cause of a 0.6% advance in the health care component. Within personal care, increased prices for toilet soap accounted for the bulk of a 1.2% rise in the index for personal care supplies, although increases were also recorded for most other toiletry items. The Health and Personal Care index was 8.3% higher than a year earlier.

un niveau de 127% supérieur à un an plus tôt. Divers produits à base de sucre, comme les boissons gazeuses, la poudre à gelée et les confitures, ont aussi enregistré des augmentations au cours du dernier mois, comme la plupart des aliments congelés et des aliments-minutes. Entre juin 1973 et juin 1974, l'indice total des aliments a progressé de 17.4%, le prix des aliments consommés à la maison montant de 16.7% et celui des aliments consommés à l'extérieur, de 20.7%.

L'indice de l'habitation a avancé de 1.2% pour atteindre 165.5 en juin par rapport à 163.4 en mai, par suite d'augmentations dans les éléments du logement et des dépenses de ménage. Dans le logement, l'élément 'propriété' a monté de 1.3% en raison d'accroissements des indices des intérêts hypothécaires, des maisons neuves et des réparations; les loyers ont progressé de 1.1%. Dans l'élément des dépenses de ménage, les prix du mazout ont monté de 3.2%, en moyenne, plusieurs villes dans tout le pays ayant connu des augmentations. Les prix des appareils ménagers et des meubles ont augmenté de 2.3% et de 1.2%, respectivement, traduisant des augmentations dans un grand nombre de centres. On a également signalé des augmentations pour le linge de maison et les rideaux et pour les revêtements de sol; les prix des articles de table et des articles ménagers ont aussi monté. Les prix des fournitures de ménage ont monté de 0.6%, la plupart des articles observés ayant connu une hausse. Au cours de la période de douze mois se terminant en juin 1974, l'indice de l'habitation a progressé de 8.8%.

L'indice de l'habillement a augmenté de 1.0%, passant de 150.5 en mai à 152.0 en juin, chacune des principales composantes ayant subi une augmentation. Plus de la moitié de cet accroissement était attribuable à une progression de 5.2% des frais des services vestimentaires, des augmentations de prix ayant été enregistrées pour le blanchissage, le nettoyage à sec et la cordonnerie dans divers centres. Il y a eu des accroissements de 0.4% et de 0.5% dans les indices des vêtements pour femmes, et pour hommes respectivement, par suite de progressions pour la plupart des articles observés, tandis que l'indice des vêtements pour enfants a monté de 0.8%. Les prix des chaussures ont augmenté de 0.4%, en moyenne, et l'indice du tissu à la verge a avancé de 1.4%. Au cours de la période de douze mois se terminant en juin 1974, l'indice des vêtements a monté de 10.1%.

L'indice des transports est passé de 148.4 en mai à 151.2 en juin, soit une augmentation de 1.9%. Pour le deuxième mois consécutif, la plus grande part de l'augmentation de l'indice des transports est due à un accroissement des prix de l'essence, qui ont monté de 4.5% en juin pour atteindre un niveau de plus de 25% supérieur à celui d'il y a un an. Les prix des automobiles ont augmenté de 1.6%, en moyenne, par suite d'un accroissement de prix de divers modèles. L'indice des transports publics a monté de 1.4% en raison surtout de la progression de l'indice des billets de train et en raison d'accroissements du prix des transports interurbains par autocar. L'indice des transports a progressé de 11.1% au cours des douze derniers mois.

L'indice des soins personnels et de l'hygiène a monté de 0.6% pour atteindre 169.3 en juin par rapport à 168.3 en mai. L'augmentation des prix des médicaments prescrits a été la principale cause d'une progression de 0.6% de la composante 'hygiène'. Dans les soins personnels, l'accroissement des prix du savon toilette a représenté le gros de l'augmentation de 1.2% de l'indice des produits pour les soins personnels, bien qu'on ait également enregistré des augmentations pour la plupart des autres articles de toilette. L'indice des soins personnels et de l'hygiène était de 8.3% plus élevé qu'un an plus tôt.

The Recreation, Education and Reading index advanced 1.5% to 156.9 in June from 154.6 in May. Generally higher driving lesson fees and increased prices for phonograph records accounted for over three-quarters of this increase. Among items of recreational equipment, increased quotations were registered for camping and sports equipment, bicycles, boats and motors. However, price decreases in some outlets resulted in a fractional decline in the indexes for television sets and stereo combinations. In the latest twelve months, the Recreation, Education and Reading index increased 9.0%.

The Tobacco and Alcohol index rose 0.5% to 143.5 in June from 142.8 in May mainly in response to somewhat higher cigarette prices and to increases in the price of beer consumed in licensed premises in Halifax, Quebec City and Montreal. In the latest twelve months, the Tobacco and Alcohol index rose 5.2%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between May and June, the total goods index advanced 1.5% with the main impetus coming from non-durable goods which rose 1.4% mainly in response to higher prices for food, gasoline and fuel oil. The index for durable goods rose 1.7% mainly because of higher quotations for automobiles, appliances, furniture and recreation equipment, and the component for semi-durable goods increased 1.0% largely in response to higher prices for home furnishings, clothing and phonograph records. A rise of 1.0% was recorded in the services index following increases in, amongst others, the shelter, clothing and education elements. In the latest twelve months the total goods index advanced 13.3% and that for services 7.8%.

L'indice des loisirs, de la formation et de la lecture progressé de 1.5% pour passer à 156.9 en juin par rapport à 154.6 en mai. L'augmentation générale des prix des leçons de conduite et l'accroissement des prix des disques ont représenté plus de trois quarts de cette augmentation. Parmi les articles de matériel récréatif, on a enregistré des augmentations de prix pour le matériel de camping et les articles de sport, les bicyclettes, les embarcations et les moteurs. Toutefois, des baisses de prix dans certains points de vente ont entraîné une baisse fractionnelle des indices des téléviseurs et des meubles-stéréo. Au cours des douze derniers mois, l'indice des loisirs, de la formation et de la lecture a monté de 9.0%.

L'indice des tabacs et alcools a monté de 0.5% pour atteindre 143.5 en juin par rapport à 142.8 en mai, par suite surtout d'une légère augmentation des prix des cigarettes et d'accroissements du prix de la bière consommée dans les débits. À Halifax, à Québec et à Montréal. Au cours des douze derniers mois, l'indice des tabacs et alcools a monté de 5.2%.

Les mouvements des prix à la consommation, reclassés par biens et services, offrent une autre vue sur l'incidence des variations de prix. Entre mai et juin, l'indice total des biens a progressé de 1.5% en raison surtout de l'augmentation des biens non durables, qui a été de 1.4%, principalement par suite de l'accroissement des prix des aliments, de l'essence et du mazout. L'indice des biens durables a progressé de 1.7% en raison surtout de l'accroissement des prix des automobiles, des appareils ménagers, des meubles et du matériel récréatif, et la composante des biens semi-durables a augmenté de 1.0% surtout par suite d'un accroissement des prix des accessoires ménagers, des vêtements et des disques. Un accroissement de 1.0% a été noté dans l'indice des services par suite d'augmentations notamment dans les éléments du logement, de l'habillement et de la formation. Au cours des douze derniers mois, l'indice total des biens a progressé de 13.3% et celui des services, de 7.8%.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES

TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)	Month — Mois												Annual
	J	F	M	A	M	J	J	A	S	O	N	D	Annuel
	1971												
	1972												
	1973												
	1974												
Industry selling price index: manufacturing(7) — Indice de prix de vente dans l'industrie: industries manufactu- rières(7)	1970	119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.9	119.1
	1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	121.6
	1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	127.4
	1973	133.1	134.6	136.6	138.2	139.5	141.0	142.8	147.8	147.7	148.8	150.2	142.7
	1974	156.8	159.3	162.2	165.5	167.9	169.3						

(1) Indexes for 1972, 1973 and 1974 are subject to revision. — Les indices pour 1972, 1973 et 1974 sont sujets à révision.

(2) This industry was changed in commodity content, price sample and weights in accordance with

(3) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. — A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.

(4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. — Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series — Ancienne série	New series — Nouvelle série
December — 1970 — Décembre	95.1	92.3
January — 1971 — Janvier	95.1	92.1
Average — 1971 — Moyenne	95.2	91.8

(5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. — Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés p total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant l facteurs de pondération de 1971 et dont la période de référence est 1971.

(6) Motor gasoline prices are 'list' and may not be a reflection of actual transaction prices. — Les prix de l'essence sont des prix de détail suggérés et peuvent ne pas traduire les prix réels à la transaction.

(7) Gross weighted, including inter-industry shipments. For explanation see page 88. — Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - June 1974 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Juin 1974 215.4

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

Transportation services - Transports	193.2	191.7	177.9	177.1	179.2	174.8	168.1

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(3) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

Oats, unground - Avoine, non moulue	6.68	6.74	4.52	5.44	5.42	3.19	7.63	7.52	5.07	
Barley, ground - Orge moulue	6.66	6.88	4.55	5.78	5.90	3.06	8.13	8.00	4.99	
Wheat, unground - Blé, non moulu	8.24	8.45	4.88	6.77	6.93	3.90	8.92	8.77	5.41	
Bran - Son	6.59	6.63	4.81	6.46	6.36	4.40	6.84	6.82	4.61	
Shorts - Gru	6.53	6.67	4.72	6.22	6.41	4.32	6.83	6.88	4.68	
Middlings - Issues	6.64	6.80	4.69	5.58	5.85	
Linseed oil meal - Farine de graine de lin	9.86	10.90	10.37	15.60	..	10.55	10.52	12.52	10.02	
Soybean oil meal - Farine de soya	8.50	9.04	18.40	10.37	10.69	16.81	11.92	12.25	14.63	
Calf starter - Moulée de début pour veaux (20-24%)	9.09	9.42	8.94	9.19	9.34	7.62	9.76	9.94	7.46	
Dairy ration - Ration laitière (16%)	7.12	7.18	5.52	7.22	7.43	4.81	8.02	7.98	5.52	
Dairy supplement (East) - Complément laitier (est) (24%)	7.53	7.51	6.78	
Dairy supplement (West) - Complément laitier (ouest) (32%)	8.17	8.51	7.16	8.90	9.08	6.98	
Pig starter mash - Moulée de début pour porcs ..	8.85	8.92	8.10	9.69	10.10	7.12	9.69	9.68	6.77	
Hog concentrate - Concentré pour porcs (35%) ...	9.38	10.26	14.00	10.48	11.61	11.29	
Hog concentrate - Concentré pour porcs (40%) ...	9.68	10.15	..	11.39	12.32	
Hog grower mash - Moulée de croissance pour porcs	7.49	7.57	6.32	7.84	8.34	5.30	8.66	8.71	6.01	
Chick starter mash - Moulée de début pour volailles (18-20%)	8.89	9.08	9.07	9.21	9.39	7.30	10.54	10.53	8.03	
Growing mash - Moulée de croissance, pour volailles	8.24	8.28	7.25	8.08	8.23	5.62	9.43	9.69	6.72	
Laying mash - Moulée de ponte (17-20%)	8.28	8.37	7.51	8.14	8.34	5.78	9.26	9.35	6.98	
Broiler starter mash - Moulée début, poulets de gril (20-23%)	9.23	9.56	10.38	9.64	9.79	8.02	10.77	10.60	8.10	
Turkey growing mash - Moulée de croissance, dindons	8.66	8.81	8.51	9.08	9.22	7.82	10.10	10.13	7.40	

Note: Mash includes pellets, crumbles, cubes, etc. - Nota: Par pâtée on entend les boulettes, les morceaux, les dés, etc.

(1) Indexes for 1974 are subject to revision. Les indices pour 1974 sont sujets à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. - L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

- (1) Indexes for 1974 are subject to revision. - Les indices pour 1974 sont sujets à révision.
(2) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of *Construction Price Statistics*, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
(3) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
(4) Indexes for 1973 and 1974 are subject to revision. - Les indices pour 1973 et 1974 sont sujets à révision.
(5) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of *Construction Price Statistics*, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
(6) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contract profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

	1966	1967	1968	1969	1970	1971	1972	
Newfoundland - Terre-Neuve	129.6	115.2	120.8	116.5	145.5	176.2	161.7	
Nova Scotia - Nouvelle-Ecosse	116.1	122.7	119.9	123.1	134.1	148.3	160.5	
New Brunswick - Nouveau-Brunswick ..	103.6	103.0	101.8	102.2	121.3	114.8	144.2	
Ontario(4)	157.4	156.3	151.5	154.0	159.2	164.5	171.9	
Manitoba	152.9	153.8	140.8	144.6	161.1	159.7	167.9	
Saskatchewan	168.1	137.6	124.9	132.1	144.9	147.1	154.6	
British Columbia - Colombie-Britannique	129.7	119.4	126.6	143.2	134.4	139.0	142.0	

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

Explication des méthodes utilisées et sources supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières: y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to mill.

Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western grains used in the index are Canadian Wheat Board buying prices for the grades listed below. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1972 — July 1973 were announced on November 6, 1973 for wheat, oats and barley. The estimates of Final payments for the 1973-74 crop year are based on wheat Board predictions of April 1974.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix des céréales de l'Ouest figurant dans l'indice représentent les prix à l'acheteur de la Commission canadienne du blé pour les catégories énumérées ci dessous. Les paiements initiaux servent d'abord au calcul de l'indice et sont ensuite révisés lorsque d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1972 à juillet 1973 ont été annoncés le 6 novembre 1973, en ce qui concerne le blé, l'avoine et l'orge. Les estimations des paiements totaux pour la campagne agricole 1973-74 sont fondées sur les prévisions d'avril 1974 de la Commission canadienne du blé.

- 3) Used in current indexes. - Utilisé dans les indices courants.

General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t \ 35-39} \times P^2_{t \ 35-39} \times P^3_{t \ 35-39} \times \dots \times P^{30}_{t \ 35-39}}}$$

Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix de produits. En tant que chiffre représentatif classique, on a une tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50 (Reference Paper No. 24)* et *Prices and Price Indexes 1949-52 (Vol. 23)* (no 62-501 au catalogue).

Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{\frac{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}{P^1_{t \ 35-39} \times P^2_{t \ 35-39} \times P^3_{t \ 35-39} \times \dots \times P^{30}_{t \ 35-39}}}$$

The selection of materials for pricing relates to groups such as “stable” prices, numbering 12, food prices, numbering 5 and “sensitive” prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre’s type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix “stables”, (12 matières), prix des aliments (5 matières) et prix “variables” (13 matières). Nous projetons d’établir un indice des prix industriels qui se rapportera à l’utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L’indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l’industrie.

The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise the Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according

L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille de familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on aligne la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense de familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation de familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments de l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère

their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no. 7.

Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the city indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that they do not in any way indicate whether price levels are higher or lower in one city than in another. Rather, they measure, within each city, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing

power, which is the most distinctive or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). A l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. A partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre. Ils mesurent plutôt dans chaque ville le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

Pouvoir d'achat du dollar de consommation 1961

A mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est

power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is $\$90.91 ((100.0/110.0) \times \$100)$, which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B

liée à la baisse du pouvoir d'achat de la monnaie, et la baisse de prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ($\$1.00 \times 100.0/144.5 = \0.69).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., in n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera $\$90.91 ((100.0/110.0) \times \$100)$, et que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que

adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6 $((90.91/80.00) \times 100)$. Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 10% rise in money wages $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4 $((146.23/74.45) \times 100)$. The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98 $((146.23/142.0) \times 100)$. (The wage and the price index both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollars (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollars (1961 = 100) is 138.3 $((102.98/74.45) \times 100)$.

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which assumes a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce earnings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real

la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6 $((90.91/80.00) \times 100)$. On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires $((\$100.00 - \$80.00 / \$80.00) \times 100)$.

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4 $((146.23/74.45) \times 100)$. Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98 $((146.23/142.0) \times 100)$. (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3 $((102.98/74.45) \times 100)$.

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de

wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city,

la rémunération effective ne sert pas à mesurer les variations de niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes qui comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons de prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour des mesures de prix de détail tirées précédemment jusqu'à mai 1971 ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969 et avril 1972 de *Prix et indices des prix* (no 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains de prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouve-

over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group and component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city is no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961 = 100*, Catalogue No. 62-534, and is

ments relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961 = 100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est

reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes*, 1961=100, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto and Montreal stock exchanges.

The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the investor's mining and supplementary stock indexes are Thursday's closing quotations from the exchange (Montreal, Toronto, Vancouver or Calgary) with the highest volume for a particular stock, as reported in the Daily Canadian Data Bank of the Financial Post Computer Services Department. For preferred stocks, prices are monthly weighted averages of the daily closing price in which weights are daily total volume. The price reference base for the indexes is the year 1956, and the indexes express prices as a percentage of price in 1956, arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the indexes, apart from the shift in the price reference base, was the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials, 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) were replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) were continued. The major group utilities was continued but the Pipelines index was added as a sub-group and the previous Power and Traction sub-group was replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A major group Finance was composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights which were previously limited to major groups, were extended to sub-groups. Weights in the index continue to be based on shares outstanding.

A revision of the Security Price Indexes to the 1971=100 base is under development.

reprise dans *Prices and Price Indexes* de septembre 1971 (62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes*, 1961=100 (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour famille agricole des séries de 1935-39 par un équivalent à jour on a cessé de la publier.

Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières mesurent dans le temps l'incidence du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un actionnaire hypothétique (par opposition au spéculateur). Le portefeuille comprend des actions de sociétés canadiennes cotées à la Bourse de Toronto et de Montréal.

Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres miniers et les indices supplémentaires sont le cours de fermeture de jeudi (Montréal, Toronto, Vancouver, Calgary) affichant le volume le plus élevé pour une valeur en particulier, d'après la Banque des données canadiennes quotidiennes du Service de l'informatique du *Financial Post*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles des cours de clôture de chaque jour et les poids, le volume quotidien total. La période de référence pour les indices est l'année 1956 et les indices représentent les prix exprimés en pourcentage des prix de 1956 recalculé sur la base 1961=100.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de cette publication. La modification la plus importante à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice : mines industrielles, boissons, textiles et habillement, pâte et papiers, et huiles (sous la désignation de pétrole). Le grand groupe de services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes : l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent d'être basés sur les actions en circulation.

On prépare actuellement une révision des Indices des cours des valeurs mobilières sur la base 1971=100.

For the list of stocks currently included in the Investors Index and Preferred Index, see *Prices—and—Price—Indexes* for March 1974.

Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI item (2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining components with the weights as shown will not provide a composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (62-002). This index is found in Table 20 of *Prices and Price Indexes* (62-002). Full trade detail, by city, is published quarterly in the *Construction Price Statistics Service Bulletin*, (62-006).

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix—et—indices—des—prix* de Mars 1974.

Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices—and—Price—Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. (2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

(1) Gross National Product Division, Statistics Canada.

(2) *Industry Selling Price Indexes 1956-1968* Cat. 62-528.

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968*, no 62-528 au catalogue.

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction in Canada* 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. (On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyennant des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de construction non résidentielle, ou commerciale, et que les taux de métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as invert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certain matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se reporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de

utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans certains cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, des lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses de main-d'œuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées de déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which is described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were fully supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.
